DRAFT EIR

Chapter	Page Number
Executive Summary	ES-1
1.0 Introduction	1.0-1
1.1 Purpose and Intended Uses of the EIR	1.0-1
1.2 Type of EIR	1.0-2
1.3 Responsible and Trustee Agencies	1.0-5
1.4 Environmental Review Process	1.0-6
1.5 Organization and Scope	1.0-8
1.6 Significance Criteria ("Thresholds")	1.0-9
1.7 Comments Received on the Notice of Preparation	1.0-10
1.8 Areas of Controversy	1.0-10
2.0 Project Description	2.0-1
2.1 Specific Plan Location and Environmental Setting	2.0-1
2.2 Project Background	2.0-1
2.3 Project Objectives	2.0-2
2.4 Project Description	2.0-3
2.5 Entitlement Requests and Other Approvals	2.0-12
3.0 Environmental Analysis	3.0-1
3.1 Aesthetics and Visual Resources	3.1-1
3.1.1 Environmental Setting	3.1-1
3.1.2 Regulatory Setting	3.1-2
3.1.3 Impacts and Mitigation Measures	3.1-4
3.2 Air Quality	3.2-1
3.2.1 Environmental Setting	3.2-1
3.2.2 Regulatory Setting	3.2-11
3.2.3 Impacts and Mitigation Measures	3.2-22
3.3 Cultural and Tribal Resources	3.3-1

INTRODUCTION

The City of Citrus Heights (City) has determined that a program-level environmental impact report (EIR) is required for the Sunrise Tomorrow Specific Plan (Specific Plan) pursuant to the requirements of the California Environmental Quality Act (CEQA).

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Cultural Resources and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific land uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. These include site-specific applications (i.e., certain commercial uses) or subsequent activities involving site specific operations which may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the proposed project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared and to confirm the sufficiency of the project-level analysis is provided in this EIR.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1) Geographically,
2) As logical parts in the chain of contemplated actions,
3) In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or

4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows:

> Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:
>
> (1) If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.
> (2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required.
> (3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.
> (4) Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e. are there new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analyzed in this program EIR. In some cases, however, a site-specific application (i.e. commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific

information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a) they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b) they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

As noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e. have all significant environmental impacts identified been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the

project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the Sunrise Tomorrow Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

PROJECT DESCRIPTION

The following provides a brief summary and overview of the Project. Chapter 2.0 of this EIR includes a detailed description of the Project, including maps and graphics. The reader is referred to Chapter 2.0 for a more complete and thorough description of the components of the Project.

The Sunrise Tomorrow Specific Plan Area ("Specific Plan Area" or "Plan Area") is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California. Citrus Heights is located within the northernmost portion of Sacramento County, approximately 10 miles northeast of downtown Sacramento, along Interstate 80 between Sacramento and Roseville.

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 2.0-3). The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 190 feet above mean sea level (MSL).

The proposed Specific Plan include the future development of up to 2,220 residential dwelling units (DU), up to 480 hotel rooms, up to 320,000 square feet (SF) of retail uses, up to 960,000 SF of

office uses, up to 450,000 SF of community/institutional land uses, parking and other vehicular and non-vehicular circulation improvements, park and open space facilities, and utility improvements.

Similar to the existing Sunrise Mall located on-site, future development allowed under the proposed Specific Plan would connect to existing city (or outside utility provider) infrastructure to provide water, sewer, gas, electric, solid waste, and storm drainage utilities. Existing storm drain, sewer, water, and gas, electric, lines/pipes are currently located on-site and along the various surrounding roadways, including but not limited to Arcadia Drive, Greenback Lane, and Sunrise Boulevard.

The Plan Area is currently designated as General Commercial by the City's General Plan Land Use Map. The General Commercial land use designation provides for retail uses, services, restaurants, professional and administrative offices, hotels and motels, mixed-use projects, multi-family residences, public and quasi-public uses, and similar and compatible uses. The floor-area-ratio (FAR) for nonresidential uses with this designation shall not exceed 0.6. Residential densities shall not exceed 40 units per net acre. The densities and intensities proposed by the Specific Plan exceed those allowed by the existing General Commercial land use designation. As such, the proposed Specific Plan would require the creation of a new land use category, Marketplace Mixed Use, to the General Plan.

The Plan Area is zoned as Shopping Center by the City. The Shopping Center zoning district is applied to areas appropriate for a wide range of retail and service land uses, promoting the unified grouping of these uses with convenient off-street parking and loading. Residential uses may also be accommodated as part of mixed-use projects. Projects within this zone are intended to be designed to be an integral part of the surrounding neighborhood, and the larger community. The Shopping Center zoning district is consistent with the General Commercial land use designation of the General Plan. The Shopping Center district allows for 40 units per net acre. The proposed Specific Plan would require a rezone of the entire Plan Area to the City's Special Planning Area district. Chapter 106.50 of the City of Citrus Heights Municipal Code outlines the development standards for the Special Planning Area district. The purpose of this zoning district is to allow consideration of innovation in site planning and other aspects of project design, and more effective design responses to site features, uses on adjoining properties, and environmental impacts than the Zoning Code standards would produce without adjustment.

Refer to Chapter 2.0, Project Description, for a more complete description of the details of the proposed Specific Plan.

AREAS OF CONTROVERSY AND ISSUES TO BE RESOLVED

This Draft EIR addresses environmental impacts associated with the Project that are known to the City of Citrus Heights that were raised during the Notice of Preparation (NOP) process, or raised during preparation of this Draft EIR. This Draft EIR discusses potentially significant impacts associated with aesthetics, air quality, biological resources, cultural and tribal resources, geology and soils, greenhouse gases and climate change, energy, hazards and hazardous materials,

hydrology and water quality, land use, noise, population and housing, public services and recreation, transportation/circulation, and utilities.

The City received six comments on the NOP for the Project Draft EIR. A copy of each letter is provided in Appendix A of this Draft EIR. A public scoping meeting was held on August 25, 2020 to present the project description to the public and interested agencies, and to receive comments from the public and interested agencies regarding the scope of the environmental analysis to be included in the Draft EIR.

Aspects of the Specific Plan that could be of public concern include the following:

- Specific Plan impacts to migratory birds and birds of prey habitat;
- Creek restoration and protection of the sensitive habitat features restored;
- Specific Plan impacts on regional stormwater, drainage, groundwater, and water quality;
- Contaminated on-site soils due to the Specific Plan's close proximity to roadways and historical past uses;
- Demolition of on-site buildings or structures potentially containing lead-based paints, mercury, asbestos containing materials, and polychlorinated biphenyl caulk;
- Diesel particulate matter (DPM) emissions from idling diesel trucks and transportation refrigeration units making deliveries within the Plan area;
- The effect of the Specific Plan on climate resilience and adaptation, considering climate impacts that the City of Citrus Heights will likely face in 2040 and 2050;
- Vehicle Miles Traveled (VMT) and associated air quality impacts from Specific Plan implementation, including induced VMT, and any impacts that may result outside of the Specific Plan boundaries; and
- Specific Plan impacts to the existing Sacramento Regional Transit Center located in the Plan Area.

ALTERNATIVES TO THE PROJECT

Section 15126.6 of the CEQA Guidelines requires an EIR to describe a reasonable range of alternatives to the project or to the location of the project which would reduce or avoid significant impacts, and which could feasibly accomplish the basic objectives of the Specific Plan. The alternatives analyzed in this EIR include the following three alternatives in addition to the Specific Plan:

- No Project Alternative
- Reduced Intensity Alternative
- Reduced Area Alternative

A comparative analysis of the Project and each of the Project alternatives is provided in Table ES-1 below. The table includes a numerical scoring system, which assigns a score of "2," "3," or "4" to the Specific Plan and each of the alternatives with respect to how each alternative compares to the Project in terms of the severity of the environmental topics addressed in this EIR. A score of "2" indicates that the alternative would have a better (or lessened) impact when compared to the

Specific Plan. A score of "3" indicates that the alternative would have the same (or equal) level of impact when compared to the Project. A score of "4" indicates that the alternative would have a worse (or greater) impact when compared to the Specific Plan. The alternative with the lowest total score is considered the environmentally superior alternative.

As shown in Table ES-1, the No Project Alternative would result in 32 points, Reduced Intensity Alternative would result in 33 points, and Reduced Area Alternative would result in 34 points. The No Project Alternative is the environmentally superior alternative. However, as required by CEQA, when the No Project Alternative is the environmentally superior alternative, the environmentally superior alternative among the others must be identified. Because the Reduced Intensity Alternative would reduce the extent of development more than the Reduced Area Alternative, the impacts associated with hydrology and water quality would be reduced more with the Reduced Intensity Alternative. Therefore, the Reduced Intensity Alternative is the next environmentally superior alternative to the Specific Plan. It is noted that the superior alternative would depend on the City's local priorities (i.e., traffic impacts to the regional roadway system, maintenance of public services and utilities services, etc.), as well as the ability to meet the Specific Plan's objectives. However, neither the Reduced Intensity Alternative nor the Reduced Area Alternative fully meet all of the Specific Plan objectives. See Section 5.4 below for a comparative evaluation of the objectives for each alternative.

SUMMARY OF IMPACTS AND MITIGATION MEASURES

The environmental impacts of the Specific Plan, the impact level of significance prior to mitigation, the proposed mitigation measures and/or adopted policies and standard measures that are already in place to mitigate an impact, and the impact level of significance after mitigation are summarized in Table ES-2.

TABLE ES-2: IMPACTS AND PROPOSED MITIGATION MEASURES

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
AESTHETICS AND VISUAL RESOURCES			
Impact 3.1-1: Specific Plan implementation would not result in substantial adverse effects on scenic vistas and resources and would not conflict with applicable zoning and other regulations governing scenic quality	LS	*None required.*	LS
Impact 3.1-2: Specific Plan implementation would not result in substantial light or glare which would adversely affect day or nighttime views in the area	LS	*None required.*	LS
AIR QUALITY			
Impact 3.2-1: Specific Plan implementation would conflict with or obstruct implementation of the applicable air quality plan or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard	PS	***Mitigation Measure 3.2-1:*** *Require Implementation of SMAQMD Basic Construction Emission Control Practices. Where needed to reduce potentially significant impacts, the City shall require project applicants, as a condition of project approval, to incorporate the most current basic control measures recommended by SMAQMD to reduce fugitive PM_{10} dust emissions, where required.* ***Mitigation Measure 3.2-2:*** *Require Compliance with SMAQMD PM Screening Criteria and Implementation of SMAQMD Enhanced Fugitive PM Dust Control Practices. For projects with a maximum daily disturbed area (i.e., grading, excavation, cut and fill) greater than 15 acres, project applicants, as a condition of project approval, shall perform screening level analysis of PM_{10} emissions during construction, and shall perform dispersion modeling if screening level analysis indicates that concentration-based limits may be exceeded (less than 50 µg/m^3 24-hour standard; 20 µg/m3 Annual Arithmetic Mean for PM_{10}; and less than 12 µg/m^3 Annual Arithmetic Mean for $PM_{2.5}$ for the maximally exposed individual sensitive receptor). If dispersion modeling indicates that these limits may be exceeded, and where needed to reduce potentially significant impacts, project applicants shall incorporate the most current enhanced fugitive PM dust control practices recommended by SMAQMD.* ***Mitigation Measure 3.2-3:*** *Prior to the City's adoption of final plans, the City shall*	SU

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		impose Conditions of Approval that memorialize those Project's design features that, when combined, would reduce Project operational ROG and NOx emissions to at least 15% below the emissions generated by the unmitigated version of the Project (i.e. prior to taking into account project design features). These design features may include those as described within the analysis contained within this DEIR, or a modified version thereof, sufficient such that the Project's operational ROG and NOx emissions are calculated (to the approval of the SMAQMD) to be at least 15% below the emissions calculated to be generated by the unmitigated version of the Project. If additional mitigation is required to achieve the 15% target, such mitigation shall be incorporated into the Project's Conditions of Approval, as applicable.	
Impact 3.2-2: Specific Plan implementation would not expose sensitive receptors to substantial pollutant concentrations and/or result in other emissions (such as those leading to odors) affecting a substantial number of people	LS	*None required.*	LS
Impact 3.2-3: Specific Plan implementation has the potential to cause substantial adverse effects on human beings, either directly or indirectly	PS	*Implement* ***Mitigation Measures 3.2-1*** *through* ***3.2-3.***	LS
CULTURAL AND TRIBAL RESOURCES			
Impact 3.3-1: Specific Plan implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5	LS	*None required.*	LS
Impact 3.3-2: Specific Plan implementation may cause a substantial adverse change in the significance of archaeological resource	PS	***Mitigation Measure 3.3-1:*** *Prior to any ground disturbance activity, the City shall ensure that a Contractor Awareness Training Program is developed and delivered to train equipment operators about cultural resources. The program shall be designed to inform construction personnel about federal and state regulations pertaining to cultural*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
pursuant to CEQA Guidelines §15064.5		*resources; the subsurface indicators of resources that shall require work stoppage; procedures for notifying the City of any occurrences; and project-specific requirements; and enforcement of penalties and repercussions for non-compliance with the program.* *The training shall be prepared by a qualified professional archaeologist and reviewed by City for approval, and may be provided in an audio-visual format, such as a DVD. The contractor shall provide culturally-affiliated tribes that consulted on the project the option of attending the initial training in person and/or providing additional materials germane to the unanticipated discovery of cultural resources for incorporation into the training.* *The training shall be provided once to the Construction Contractor's superintendent, who shall then be responsible for ensuring that all future equipment operators and personnel view the video and review training materials prior to their first excavation on the property. All trained personnel shall be required to sign a form that acknowledges receipt of the training. A copy of the form shall be provided to the City of Citrus Heights as proof of compliance.* ***Mitigation Measure 3.3-2:*** *If subsurface deposits believed to be cultural in origin are discovered during construction, all work shall halt within a 50-foot radius of the discovery, and the developer shall immediately notify the City of Citrus Heights Planning Manager. The contractor shall retain a qualified professional archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeology and subject to approval by the City, to evaluate the significance of the find and develop appropriate management recommendations in consultation with the Buena Vista Rancheria and the United Auburn Indian Community of the Auburn Rancheria. All management recommendations shall be provided to the City in writing for the City's review and approval. If recommended by the qualified professional and approved by the City, this may include modification of the no-work radius. The following notifications shall apply depending on the nature of the find, subject to the review and approval of the City:* 1. *Work may resume immediately, and no agency notifications are required if: 1) the professional archaeologist determines, in consultation with the Buena Vista Rancheria and the United Auburn Indian Community of the Auburn Rancheria, that the find does not represent a cultural resource.*	

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		2. *If the professional archaeologist determines that the find does represent a cultural resource from any time period or cultural affiliation, the City shall be notified immediately, to consult on a finding of eligibility and implementation of appropriate treatment measures, if the find is determined to be a historical resource or archaeological resource under CEQA, as defined in Section 15064.5(a) and 15064.5(c) of the CEQA Guidelines. Work shall not resume within the no-work radius until the City, through consultation as appropriate, determines that the site either: 1) is not a historical resource or archaeological resource under CEQA, as defined in Section 15064.5(a) and 15074.5(c) of the CEQA Guidelines; or 2) that the treatment measures have been completed to its satisfaction.*	
Impact 3.3-3: Specific Plan implementation may disturb human remains, including those interred outside of formal cemeteries	PS	***Mitigation Measure 3.3-3:*** *If human remains, or remains that are potentially human, are discovered during construction, the construction supervisor or on-site archaeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641) and shall notify the Sacramento County Coroner (per §7050.5 of the Health and Safety Code) and the City. The provisions of §7050.5 of the California Health and Safety Code, § 5097.98 of the California Public Resources Code, and Assembly Bill 2641 shall be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, the Coroner will notify the Native American Heritage Commission, which then will designate a Native American Most Likely Descendant (MLD) for the project (§ 5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the Landowner does not agree with the recommendations of the MLD, the NAHC can mediate (§ 5097.94 of the Public Resources Code). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (§ 5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate information center; using an open space or conservation zoning designation or easement; or recording a reinternment document with the County in which the property is located (AB 2641). Work shall not resume within the no-work radius until the City, through consultation as appropriate, determines that the treatment measures have been completed to its satisfaction.*	LS
Impact 3.3-4: Specific Plan implementation may cause a substantial adverse change in the	PS	***Mitigation Measure 3.3-4:*** *A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the City shall contact the Buena Vista Rancheria and the*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
significance of a tribal cultural resource		*United Auburn Indian Community of the Auburn Rancheria. A tribal representative shall be invited to, at its discretion, voluntarily inspect the project location, including any soil piles, trenches, or other disturbed areas, within the first five days of ground-breaking activity. Construction activity may be ongoing during this time.* *Should the tribe choose not to perform a field visit within the first five days, construction activities may continue as scheduled, as long as notification was made.*	
GEOLOGY AND SOILS			
Impact 3.4-1: Specific Plan implementation would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic related ground failure, or landslides	LS	*None required.*	LS
Impact 3.4-2: Construction and implementation of projects under the Specific Plan has the potential to result in substantial soil erosion or the loss of topsoil	PS	***Mitigation Measure 3.4-1****: Prior to any soil disturbing activity, the Project proponents for developments within the Specific Plan Area shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the RWQCB in accordance with the NPDES General Construction Permit requirements. The SWPPP shall be designed to control pollutant discharges utilizing Best Management Practices (BMPs) and technology to reduce erosion and sediments. BMPs may consist of a wide variety of measures taken to reduce pollutants in stormwater runoff from the Specific Plan Area. Measures shall include temporary erosion control measures (such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover) that will be employed to control erosion from disturbed areas. Final selection of BMPs will be subject to approval by the City of Citrus Heights and the RWQCB. The SWPPP will be kept on site during construction activity and will be made available upon request to representatives of the RWQCB.*	LS
Impact 3.4-3: The Specific Plan would not be located on a geologic unit or soil that is unstable, or that would become unstable as a	LS	*None required.*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
result of Specific Plan implementation, and would not result in landslide, lateral spreading, subsidence, liquefaction or collapse			
Impact 3.4-4: Buildout of the Specific Plan would not create substantial risks to life or property arising from expansive soils	LS	*None required.*	LS
Impact 3.4-5: Buildout of the Specific Plan has the potential to directly or indirectly destroy a unique geological feature or paleontological resource	PS	***Mitigation Measure 3.4-2****: If any paleontological resources are found during grading and construction activities of the Specific Plan, all work shall be halted immediately within a 200-foot radius of the discovery until a qualified paleontologist has evaluated the find.* *Work shall not continue at the discovery site until the paleontologist evaluates the find and makes a determination regarding the significance of the resource and identifies recommendations for conservation of the resource, including preserving in place or relocating on the Specific Plan Area, if feasible, or collecting the resource to the extent feasible and documenting the find with the University of California Museum of Paleontology.*	LS
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY			
Impact 3.5-1: Specific Plan implementation would not generate GHGs, either directly or indirectly, that would have a significant effect on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases	PS	***Mitigation Measure 3.5-1:*** *Prior to the approval of individual phases (i.e. tentative maps, site plan review, etc.), each project applicant shall determine whether their individual project(s) would develop any natural gas infrastructure. If any project applicant would develop natural gas infrastructure for any individual project (such as natural gas connections for cooking uses at a restaurant land use), the project applicant shall demonstrate that the individual project implements all feasible on-site and off-site mitigation to offset the equivalent amount of GHG emissions that would be generated from the natural gas infrastructure (i.e. usage of natural gas by the individual project). Mitigation may overlap with the mitigation utilized for Mitigation Measure 3.2-2 (see Section 3.2: Air Quality, for further detail). Mitigation may include but is not limited to:* • *Use natural refrigerants: Projects can participate in SMUD's pilot program to use lower GWP or natural alternates for refrigeration and air conditioning. Natural refrigerants include ammonia, CO_2, or hydrocarbons. To quantify the*	SU

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		benefits of this measure, the applicant shall work with SMUD or CARB tools to calculate high-GWP emissions from traditional refrigerants (as these emissions are not typically included in CEQA emissions inventories and would not be added to the unmitigated emissions totals) and then calculate the reduction due to the lower-GWP refrigerants. • *Increase vegetation sequestration: Projects can increase carbon sequestration in natural and working lands through planting and management techniques. To quantify the benefits of these commitments, the applicant may use calculational methodology such as CARB's approved offsets protocols, California Climate Initiatives (CCI) tools and calculators, and/or CalEEMod.* • *Install electric vehicle charging stations: Projects can install EV charging stations in addition to the electrical infrastructure required by BMP 2. To quantify the benefits of this measure, the applicant shall use Project-specific or applicable published literature to calculate the projected amount of charging that will be provided by the chargers, then subtract the indirect emissions from electricity used by the chargers from the gasoline- or diesel-combustion tailpipe emissions that would otherwise be produced by internal combustion-powered vehicles. The applicant shall take care not to double-count GHG reductions with reductions already assumed by the State in its base EV projections.* • *Solar water heaters and other water heating reductions: Projects can install solar water heaters to replace the need for natural gas or electricity for water heating. Since the unmitigated default to show compliance with BMP 1 is to assume no natural gas, the GHG benefit should be the reduction in electricity that would otherwise be used to heat water.* • *Increase water and waste reductions beyond regulatory compliance: As described in Section 5.2, projects can demonstrate GHG reductions beyond defaults based on project-specific studies and initiatives and can quantify these reductions using CalEEMod methodology.* • *Reduce gas- or diesel-powered landscaping equipment use: Project proponents design for reduced landscaping equipment (xeriscaping) or contract with a*	

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		parks district, city, or homeowners' association to require the use of electric landscaping equipment. To demonstrate GHG reductions would require enforceable mechanisms. For example, the California Electrical Code requires outdoor receptacle outlet(s) to be installed at an accessible level for all new residences; this can enable the use of electric landscaping equipment but does not ensure its use. *Each mitigation strategy shall be developed with, and approved by, the City of Citrus Heights. Each mitigation strategy is subject to the review and approval of the City of Citrus Heights on a project-by-project basis. The City of Citrus Heights is required to verify each mitigation strategy and its associated reductions to ensure that the associated annual greenhouse gas impacts are reduced to offset the amount of GHG emissions generated from the natural gas infrastructure, as much as is feasible.*	
Impact 3.5-2: Specific Plan implementation would not result in the inefficient, wasteful, or unnecessary use of energy resources, or conflict with or obstruct a state or local plan for renewable energy or energy efficiency	LS	*None required.*	LS
HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.6-1: Specific Plan implementation has the potential to create a significant hazard through the routine transport, use, or disposal of hazardous materials or through the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment	PS	***Mitigation Measure 3.6-1****: Prior to any renovations or demolition of the existing structures within the Plan Area, surveys shall be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. If concentrations of hazardous materials are determined to exceed applicable ESL thresholds, appropriate on-site remediation shall be conducted in coordination with the Sacramento County EMD. Removal, demolition and disposal of any of the above-mentioned chemicals shall be conducted in compliance with California and other local environmental regulations and policies, including but not limited to the Sacramento Metropolitan Air Quality Management District's Rule 902.* ***Mitigation Measure 3.6-2****: Prior to the demolition of sensitive hazardous areas identified on Figures 3.6-1a and 3.6-1b for Parcels B (Goodyear Tire Center facility) and*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		C (Firestone Store #35C), area specific evaluations shall be conducted to determine if soil sampling is required, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. Investigations shall include evaluating the locations of hydraulic lifts that have had in-ground hydraulic fluid tanks, oil/water separators, and former locations of underground waste oil tanks. If soil sampling is determined necessary, a soil sampling report shall be prepared by a qualified consultant that includes recommendations to any concentrations of hazardous materials in exceedance of appropriate ESL thresholds, as necessary, which shall be implemented by the future project proponent. ***Mitigation Measure 3.6-3****: Prior to the demolition and redevelopment of the sensitive hazardous area identified on Figures 3.6-1a and 3.6-1b for Parcel G (Sears Auto Center #6799 facility), the owner of Parcel G and/or future project proponent shall complete the investigation of the potential petroleum hydrocarbon impacts to groundwater under the oversight of the Sacramento County EMD, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. If it is determined that petroleum hydrocarbon is present and impacting groundwater, on-site remediation shall be conducted to the satisfaction of the Sacramento County EMD.* ***Mitigation Measure 3.6-4****: Prior to the demolition and redevelopment of the SMUD equipment area "6047" and neighboring areas on Parcel E, the existing containers with unknown contents shall be identified and property disposed of, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property.* ***Mitigation Measure 3.6-5****: Prior to commencement of grading, the applicant shall submit Construction Site Management Plan for review and approval by the City. The Construction Site Management Plan shall include the following requirements:* • *Hazardous materials must be stored in locations that are removed from storm drain inlets, drainage ways, and canals, and that are surrounded by earthen berms to prevent materials from entering stormwater runoff or natural drainage features. The materials must also be covered with impervious tarps or stored inside buildings to ensure that materials are not released to the air during windy conditions or exposed to rain.* • *All construction crew members must be trained regarding best practices for*	

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		use, storage, and disposal of hazardous materials. • *All construction crew members must be instructed to immediately notify a construction foreperson of any spills of hazards materials, and the foreperson must take steps to contain the spilled materials.* • *Any releases of hazardous materials must be immediately reported to the Sacramento County Environmental Compliance Division of Sacramento County's Environmental Management Department and remediated in accordance with Sacramento County's requirements. This may include excavating and disposing of contaminated soil. Typically, construction projects require on-site storage of relatively small amounts of hazardous materials, which would also limit the potential impacts from a release of these materials.*	
Impact 3.6-2: Specific Plan implementation would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school	LS	*None required.*	LS
Impact 3.6-3: Specific Plan implementation would not result in impacts from being included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5	LS	*None required.*	LS
Impact 3.6-4: Specific Plan implementation would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan	LS	*None required.*	LS
HYDROLOGY AND WATER QUALITY			
Impact 3.7-1: Specific Plan implementation would not violate water quality standards or waste discharge requirements during	LS	*None required.*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
construction			
Impact 3.7-2: Specific Plan implementation would not violate water quality standards or waste discharge requirements during operation	LS	*None required.*	LS
Impact 3.7-3: Specific Plan implementation may decrease groundwater supplies or interfere substantially with groundwater recharge such that the Specific Plan may impede sustainable groundwater management of the basin	PS	***Mitigation Measure 3.7-1:*** *Before approval of the site plans for all project phases, a detailed Best Management Practice (BMP) and water quality maintenance plan shall be prepared by a qualified engineer retained by the project applicant that meets the standards of the City's NPDES Permit (No. CAS082597) and shall document that stormwater runoff from the Plan Area is treated per the standards in the Stormwater Quality Design Manual for Sacramento and South Placer Regions. Drafts of the plan shall be submitted to the City of Citrus Heights for review and approval concurrently with development of site plans for all project phases. The plan shall finalize the water quality improvements and further detail the structural and nonstructural BMPs proposed for the Specific Plan. The plan shall include the elements described below.* • *A quantitative hydrologic and water quality analysis of proposed conditions incorporating the proposed drainage design features.* • *Pre-development and post-development calculations demonstrating that the proposed water quality BMPs meet or exceed requirements established by the City of Citrus Heights and including details regarding the size, geometry, and functional timing of storage and release pursuant to the "Stormwater Quality Design Manual for Sacramento and South Placer Regions."* • *Source control programs to control water quality pollutants on the Plan Area, which may include but are limited to recycling, street sweeping, storm drain cleaning, household hazardous waste collection, waste minimization, prevention of spills and illegal dumping, and effective management of public trash collection areas.* • *Low Impact Development (LID) and Hydromodification control measures shall be integrated into the BMP and water quality maintenance plan. These may include, but are not limited to:* o *Bioretention planters;* o *surface swales;* o *replacement of conventional impervious surfaces with pervious surfaces*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		(e.g., porous pavement, green roofs); *o impervious surfaces disconnection; and* *o trees planted to intercept stormwater.*	
Impact 3.7-4: Specific Plan implementation would not alter the existing drainage pattern in a manner which would result in substantial erosion or siltation on- or off-site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite, or create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff	LS	*None required.*	LS
Impact 3.7-5: Specific Plan implementation would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan	LS	*None required.*	LS
LAND USE AND PLANNING			
Impact 3.8-1: Specific Plan implementation would not physically divide an established community	LS	*None required.*	LS
Impact 3.8-2: Specific Plan implementation would not conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the Specific Plan adopted to avoid or mitigate an environmental effect	LS	*None required.*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
NOISE			
Impact 3.9-1: Specific Plan implementation would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Plan Area in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies – Operational and Traffic Noise	PS	***Mitigation Measure 3.9-1a:*** *If any proposed uses located along Sunrise Boulevard or Greenback Lane would contain noise-sensitive receptors (including but not limited to hotel uses, mixed-use residential, senior housing or other residential), noise studies shall be prepared to demonstrate compliance with the City's exterior noise standards at proposed outdoor areas. The noise studies shall, as applicable, include recommendations for the appropriate methods for reducing noise levels at the sites to within the City's exterior noise standards. The effectiveness of the mitigation, if required, shall be documented by the noise studies. The noise studies shall be submitted prior to the approval of tentative maps or site plans for the mixed-use residential, senior housing, and hotel uses located along Sunrise Boulevard or Greenback Lane, and shall be subject to review and approval by the City of Citrus Heights.* ***Mitigation Measure 3.9-1b:*** *The proposed hotel use located at the corner of Sunrise Boulevard and Greenback Lane shall have a noise study prepared to demonstrate compliance with the City's interior noise standard. The noise study shall, as applicable, include recommendations for the appropriate methods for reducing noise levels at the site to within the City's interior noise standards. The effectiveness of the mitigation, if required, shall be documented by the noise study. The noise study shall be submitted prior to the approval of the site plan for the hotel use located along Sunrise Boulevard or Greenback Lane, and shall be subject to review and approval by the City of Citrus Heights.* ***Mitigation Measure 3.9-2:*** *Events held in the proposed Sunrise Commons Park which require the use of amplified sound exceeding 60 dBA L_{eq} at 50 feet shall require a permit obtained from the City pursuant to Section 34-88(2) of the City's Noise Ordinance. Noise levels from such events shall not exceed 90 dBA at 50 feet from the sound system and shall be monitored to verify compliance.* ***Mitigation Measure 3.9-3:*** *To address noise levels from special events and music, the following conditions shall apply to the project:* • *Amplified sound shall not continue past 10:00 p.m.* • *Buyers and renters shall be notified of potential noise due to special events, including the occasional use of amplified sound.*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
		• *Windows of residential units with a direct view of the Sunrise Commons Park, shall be acoustically upgraded with windows having a minimum sound transmission class (STC) rating of 35.* • *Mixed-use residential units located over commercial-use areas, which may include the use of indoor or outdoor amplified sound, shall be acoustically upgraded with minimum STC 35 exterior windows and a floor-ceiling assembly having a minimum laboratory STC rating of 60 (55 if field-tested), as determined by a qualified acoustic engineer.*	
Impact 3.9-2: Specific Plan implementation would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Plan Area in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies – Construction Noise	PS	***Mitigation Measure 3.9-4:*** *Prior to issuance of a grading, building, or demolition permit, the project applicant(s) shall prepare a construction noise management plan that identifies measures to be taken to minimize construction noise on surrounding sensitive land uses. The plan shall include specific noise management measures to be included within the project plans and specifications, subject to review and approval by the City Community Development Department. Noise management measures may include, but are not limited to, using temporary noise walls or curtains around specific areas, staging lay down areas away from sensitive uses, locating truck routes away from receptors, reducing hours of operation, limiting certain loud noise activities to certain hours, etc. The project applicant(s) shall demonstrate, to the satisfaction of the City, that the project complies with the following:* • *Construction activities shall only take place between the hours limited 6:00 a.m. to 8:00 p.m. on weekdays, and 7:00 a.m. to 8:00 p.m. on Saturday and Sunday.* • *Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers' recommendations. Equipment engine shrouds shall be closed during equipment operation.* • *When not in use, motorized construction equipment shall not be left idling for more than 5 minutes.* • *Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.*	LS

ENVIRONMENTAL IMPACT	*LEVEL OF SIGNIFICANCE WITHOUT MITIGATION*[1]	*MITIGATION MEASURE*	*RESULTING LEVEL OF SIGNIFICANCE*[1]
Impact 3.9-3: Specific Plan implementation would not generate excessive groundborne vibration or groundborne noise levels	PS	***Mitigation Measure 3.9-5:*** *If pile driving is required within 75 feet of a residential structure, pre-construction crack documentation and construction vibration monitoring shall be conducted to ensure that construction vibrations do not cause damage to any adjacent structures. The results of the documentation and monitoring shall be submitted to the City Community Development Department prior to the start of construction activities which would occur within 75 feet of a residential structure.*	LS

This page left intentionally blank.

This section summarizes the purpose of the Environmental Impact Report (EIR) for the Sunrise Tomorrow Specific Plan (the "project"). The following discussion addresses the environmental procedures that are to be followed according to State law, the intended uses of the EIR, the Project's relationship to the City's General Plan, the EIR scope and organization, and a summary of the agency and public comments received during the public review period for the Notice of Preparation (NOP).

1.1 PURPOSE AND INTENDED USES OF THE EIR

The City of Citrus Heights (City), as lead agency, determined that the proposed Sunrise Tomorrow Specific Plan (Specific Plan) is a "project" within the definition of the California Environmental Quality Act (CEQA). CEQA requires the preparation of an environmental impact report prior to approving any project that may have a significant impact on the environment. For the purposes of CEQA, the term "project" refers to the whole of an action, which has the potential for resulting in a direct physical change or a reasonably foreseeable indirect physical change in the environment (CEQA Guidelines Section 15378[a]).

An EIR must disclose the expected environmental impacts, including impacts that cannot be avoided, growth-inducing effects, impacts found not to be significant, and significant cumulative impacts, as well as identify mitigation measures and alternatives to the proposed project that could reduce or avoid its adverse environmental impacts. CEQA requires government agencies to consider and, where feasible, minimize environmental impacts of proposed development. CEQA further requires public agencies to balance a variety of public objectives, including economic, environmental, and social factors in making a decision to approve a development project with significant and unavoidable environmental impacts.

The City has prepared this Draft EIR to provide the public and responsible and trustee agencies with an objective analysis of the potential environmental impacts resulting from construction and operation of the Specific Plan Project. The environmental review process enables interested parties to evaluate the proposed Project in terms of its environmental consequences, to examine and recommend methods to eliminate or reduce potential adverse impacts, and to consider a reasonable range of alternatives to the Project. While CEQA requires that consideration be given to avoiding adverse environmental effects, the lead agency must balance adverse environmental effects against other public objectives, including the economic and social benefits of a project, in determining whether a project should be approved.

This EIR will be used by the City to determine whether to approve, modify, or deny the proposed Project and associated approvals in light of the Project's environmental effects. The EIR will be used as the primary environmental document to evaluate full project development, along with all associated infrastructure improvements, and permitting actions associated with The Sunrise Tomorrow Specific Plan. All of the actions and components of the proposed project are described in detail in Section 2.0 of this Draft EIR.

1.2 TYPE OF EIR

The CEQA Guidelines identify several types of EIRs, each applicable to different project circumstances. This EIR has been prepared as a Program EIR pursuant to CEQA Guidelines Section 15168. The program-level analysis considers the broad environmental effects of the proposed project as a whole.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Cultural Resources and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific land uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the proposed project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1) Geographically,
2) As logical parts in the chain of contemplated actions,
3) In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, exemptions, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative

impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows:

> Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:
>
> (1) If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.
> (2) If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required.
> (3) An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.
> (4) Where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., are there new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San*

Joaquin (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a) they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b) they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., have all significant environmental impacts identified been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section

65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the Sunrise Tomorrow Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

1.3 RESPONSIBLE AND TRUSTEE AGENCIES

As required by CEQA, this EIR defines lead, responsible, and trustee agencies. The City of Citrus Heights is the "Lead Agency" for the project because it holds principal responsibility for approving the project. The term "Responsible Agency" includes all public agencies other than the Lead Agency that have discretionary approval power over the project or an aspect of the project (CEQA Guidelines Section 15381). For the purpose of CEQA, a "Trustee" agency has jurisdiction by law over natural resources that are held in trust for the people of the State of California. CEQA Guidelines Section 15386 recognizes four particular trustee agencies: (a) the California Department of Fish and Wildlife with regard to the fish and wildlife of the State, to designated rare or endangered native plants, and to game refuges, ecological reserves, and other areas administered by the department; (b) the State Lands Commission with regard to State owned "sovereign" lands such as the beds of navigable waters and State school lands; (c) the State Department of Parks and Recreation with regard to units of the State Park System; and (d) The University of California with regard to sites within the Natural Land and Water Reserves System.

The following agencies are considered Responsible Agencies for this project, and may be required to issue permits or approve certain aspects of the proposed Specific Plan:

- Regional Water Quality Control Board (RWQCB) – Construction activities would be required to be covered under the National Pollution Discharge Elimination System (NPDES);
- RWQCB – A Storm Water Pollution Prevention Plan (SWPPP) would be required to be approved prior to construction activities pursuant to the Construction General Permit (CGP) issued by the SWQCB and the Clean Water Act;
- RWQCB – A Clean Water Section 401 Water Quality Certification and/or Waste Discharge Requirement Permit may be required for creek restoration;
- California Department of Fish and Wildlife (CDFW) – A Section 1600 Permit may be required for the optional creek restoration;

- U.S. Army Corps of Engineers (USACE) – A Section 404 permit may be required for the optional creek restoration;
- Sacramento Metropolitan Air Quality Management District (SMAQMD) – Construction activities would be subject to the SMAQMD rules and regulations;
- Citrus Heights Water District – Approval of infrastructure details for water supply facilities;
- Sacramento Area Sanitation District – Approval of infrastructure details for wastewater collection facilities;
- Sacramento Municipal Utility District (SMUD) – Approval of infrastructure details for electricity facilities; and
- Pacific Gas & Electric (PG&E) – Approval of infrastructure details for natural gas facilities.

1.4 ENVIRONMENTAL REVIEW PROCESS

The review and certification process for the EIR has involved, or will involve, the following general procedural steps:

NOTICE OF PREPARATION

The City circulated a Notice of Preparation (NOP) of an EIR for the proposed project on August 7, 2020 to responsible and trustee agencies, the State Clearinghouse, and the public. A public scoping meeting was held on August 25, 2020 at 5:00 p.m. to present the project description to the public and interested agencies, and to receive comments from the public and interested agencies regarding the scope of the environmental analysis to be included in the Draft EIR. Due to COVID-19, the public scoping meeting was held on-line. Concerns raised in response to the NOP were considered during preparation of the Draft EIR. The NOP and responses to the NOP by interested parties are presented in Appendix A of this EIR.

DRAFT EIR

This document constitutes the Draft EIR. The Draft EIR contains a description of the project, description of the environmental setting, identification of project impacts, and mitigation measures for impacts found to be significant, as well as an analysis of project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. This Draft EIR identifies issues determined to have no impact or a less than significant impact, and provides detailed analysis of potentially significant and significant impacts. Comments received in response to the NOP were considered in preparing the analysis in this EIR. Upon completion of the Draft EIR, the City has filed the Notice of Completion (NOC) with the State Clearinghouse of the Governor's Office of Planning and Research to begin the public review period.

PUBLIC NOTICE/PUBLIC REVIEW

The City has provided a public notice of availability for the Draft EIR, and invites comment from the general public, agencies, organizations, and other interested parties. Consistent with CEQA, the review period for this Draft EIR is forty-five (45) days. Public comment on the Draft EIR or questions regarding the Draft EIR should be addressed to:

Casey Kempenaar, Planning Manager
City of Citrus Heights
6360 Fountain Square Drive, Citrus Heights, CA 95621
ckempenaar@citrusheights.net

RESPONSE TO COMMENTS/FINAL EIR

Following the public review period, a Final EIR will be prepared. The Final EIR will respond to significant environmental issues raised either in written comments received during the public review period or in oral comments received at a public hearing during such review period.

CERTIFICATION OF THE EIR/PROJECT CONSIDERATION

CEQA Guidelines Section 15090 requires lead agencies to certify the final EIR prior to approving a project. The lead agency decision making body shall certify that (i) the final EIR has been completed in compliance with CEQA; (ii) that the final EIR was presented to the decision-making body, which reviewed and considered the information contained in the final EIR prior to approving the project; and (iii) that the final EIR reflects the lead agency's independent judgment and analysis.

For the proposed project, the City Council shall be the City's ultimate decision-making body. The Council will therefore review and consider the Final EIR and make a determination regarding whether the document is "adequate and complete." In general, a Final EIR meets this standard if:

1) The EIR shows a good faith effort at full disclosure of environmental information; and

2) The EIR provides sufficient analysis to allow decisions to be made regarding the proposed project in contemplation of environmental considerations.

The level of detail contained throughout this EIR is consistent with Section 15151 of the CEQA Guidelines and recent court decisions, which provide the standard of adequacy on which this document is based. The Guidelines state as follows:

> *"An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of the environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure."*

Following review and consideration of the Final EIR, the City may take action to approve, modify, or reject the project. As part of project approval, the City also is also required to adopt a Mitigation Monitoring and Reporting Program, as described below, prepared in accordance with Public Resources Code Section 21081.6(a) and CEQA Guidelines Section 15097. This Mitigation Monitoring and Reporting Program must include all of the mitigation measures that have been

incorporated into or imposed upon the project to reduce or avoid significant effects on the environment, and would be designed to ensure that these measures are actually carried out during project implementation.

1.5 ORGANIZATION AND SCOPE

Sections 15122 through 15132 of the State CEQA Guidelines identify the content requirements for Draft and Final EIRs. An EIR must include or address a description of the environmental setting, an environmental impact analysis, mitigation measures, alternatives, significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. Discussion of the environmental issues addressed in the Draft EIR was established through review of environmental and planning documentation developed for the project, environmental and planning documentation prepared for recent projects located within the City of Citrus Heights, applicable local and regional planning documents, and responses to the NOP.

This Draft EIR is organized in the following manner:

EXECUTIVE SUMMARY

The Executive Summary summarizes the characteristics of the proposed project, known areas of controversy and issues to be resolved, and provides a concise summary matrix of the project's environmental impacts and possible mitigation measures. This chapter identifies alternatives that reduce or avoid at least one significant environmental effect of the proposed project.

CHAPTER 1.0 – INTRODUCTION

Chapter 1.0 briefly describes the purpose of the environmental evaluation, identifies the lead, trustee, and responsible agencies, summarizes the process associated with preparation and certification of an EIR, and identifies the scope and organization of the Draft EIR.

CHAPTER 2.0 – PROJECT DESCRIPTION

Chapter 2.0 provides a detailed description of the proposed project, including the location, intended objectives, background information, the physical and technical characteristics, including the decisions subject to CEQA, related infrastructure improvements, and a list of related agency action requirements.

CHAPTER 3.0– ENVIRONMENTAL ANALYSIS

Chapter 3.0 introduces the environmental analysis contained in Sections 3.1 through 3.13.

SECTIONS 3.1 THROUGH 3.13– ENVIRONMENTAL SETTING, IMPACTS AND MITIGATION MEASURES

Sections 3.1 through 3.13 each contain an analysis of a distinct environmental topic area. Each section addresses a topical area and is organized as follows:

Environmental Setting. A description of the existing environment as it pertains to the topical area.

Regulatory Setting. A description of the regulatory environment that may be applicable to the project.

Impacts and Mitigation Measures. Identification of the significance criteria (also referred to as "thresholds of significance" throughout this EIR) by which the significance of impacts are determined, a description of project-related impacts associated with the environmental topic, identification of appropriate mitigation measures, and a conclusion as to the significance of each impact after the incorporation of proposed mitigation measures.

CHAPTER 4.0 – OTHER CEQA-REQUIRED TOPICS

Chapter 4.0 evaluates and describes the CEQA required topics as follows: cumulative and significant and unavoidable environmental effects under cumulative conditions. Chapter 4.0 also evaluates and describes the CEQA required topics as follows: impacts considered less-than-significant, significant and irreversible impacts, growth-inducing effects, and significant and unavoidable environmental effects.

CHAPTER 5.0 – ALTERNATIVES TO THE PROJECT

State CEQA Guidelines Section 15126.6 requires that an EIR describe a range of reasonable alternatives to the project, which could feasibly attain the basic objectives of the project and avoid and/or lessen any significant environmental effects of the project. Chapter 5.0 provides a comparative analysis between the environmental impacts of the project and the selected alternatives.

CHAPTER 6.0 – REPORT PREPARERS

This chapter lists all authors and agencies that assisted in the preparation of the EIR, by name, title, and company or agency affiliation.

CHAPTER 7.0 – REFERENCES

This chapter lists all references used in the preparation of the EIR.

APPENDICES

This section includes all notices and other procedural documents pertinent to the EIR, as well as technical material prepared to support the analysis. The EIR appendices are available in electronic format. The appendices can be viewed online at:

https://www.citrusheights.net/1071/Sunrise-Tomorrow-Environmental-Review

1.6 SIGNIFICANCE CRITERIA ("THRESHOLDS")

In general, CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial" adverse change in the physical environment. A potential impact is considered significant if a project would substantially degrade the environmental quality of land,

air, water, minerals, flora, fauna, ambient noise, and objects of historic and aesthetic significance (CEQA Guidelines §§15360, 15382).

Definitions of significance vary with the physical condition affected and the setting in which the change occurs. The CEQA Guidelines set forth physical impacts that trigger the requirement to make "mandatory findings of significance" (CEQA Guidelines §15065).

This CEQA document relies on three levels of impact significance:

1. Less-than-significant impact, for which no mitigation measures are warranted;
2. Significant impact that can be mitigated to a level that is less than significant; and,
3. Significant impact that cannot be mitigated to a level that is less than significant. Such impacts are referred to as significant and unavoidable.

Each resource area uses a distinct set of significance criteria (also referred to as "thresholds of significance" throughout the EIR). The significance criteria are identified at the beginning of the impact discussion for each resource area. These significance criteria promote consistent evaluation of impacts for all alternatives considered, even though significance criteria are necessarily different for each resource considered. When criteria for significance determinations relative to a specific environmental resource are not identified in the CEQA Guidelines, specific criteria have been developed for this Draft EIR consistent with the past pattern and practice of the City of Citrus Heights.

1.7 COMMENTS RECEIVED ON THE NOTICE OF PREPARATION

The City received six written comment letters on the NOP for the proposed project Draft EIR. A copy of each letter is provided in Appendix A of this Draft EIR. A public scoping meeting was held on August 25, 2020 to present the project description to the public and interested agencies, and to receive comments from the public and interested agencies regarding the scope of the environmental analysis to be included in the Draft EIR.

1. Caltrans (August 19, 2020);
2. California Department of Fish and Wildlife (September 8, 2020);
3. Central Valley Regional Water Quality Control Board (September 8, 2020);
4. Department of Toxic Substances Control (August 26, 2020);
5. Native American Heritage Commission (August 12, 2020);
6. Sacramento Metropolitan Air Quality Management District (September 1, 2020).

1.8 AREAS OF CONTROVERSY

The following are topics of public concern or potential controversy that have become known to the City staff based on public input, known regional issues, and staff observations:

- Specific Plan impacts to migratory birds and birds of prey habitat;
- Creek restoration and protection of the sensitive habitat features restored;
- Specific Plan impacts on regional stormwater, drainage, groundwater, and water quality;

- Contaminated on-site soils due to the Specific Plan's close proximity to roadways and historical past uses;
- Demolition of on-site buildings or structures potentially containing lead-based paints, mercury, asbestos containing materials, and polychlorinated biphenyl caulk;
- Diesel particulate matter (DPM) emissions from idling diesel trucks and transportation refrigeration units making deliveries within the Plan area;
- The effect of the Specific Plan on climate resilience and adaptation, considering climate impacts that the City of Citrus Heights will likely face in 2040 and 2050;
- Vehicle Miles Traveled (VMT) and associated air quality impacts from Specific Plan implementation, including induced VMT, and any impacts that may result outside of the Specific Plan boundaries; and
- Specific Plan impacts to the existing Sacramento Regional Transit Center located in the Plan Area.

This page left intentionally blank.

This chapter provides a comprehensive description of the Sunrise Tomorrow Specific Plan (project, or "Specific Plan"), including background information, Specific Plan Planning Areas, development potential, land uses, street network, vehicular and non-vehicular circulation, open space network, sustainability features, phasing, utility improvements, objectives, and requested entitlements and other approvals.

Figures referenced throughout this section are located at the end of the chapter.

2.1 SPECIFIC PLAN LOCATION AND ENVIRONMENTAL SETTING

SPECIFIC PLAN LOCATION

The Sunrise Tomorrow Specific Plan Area ("Specific Plan Area" or "Plan Area") is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California (see Figure 2.0-1). Citrus Heights is located within the northernmost portion of Sacramento County, approximately 10 miles northeast of downtown Sacramento, along Interstate 80 between Sacramento and Roseville (see Figure 2.0-2). The Plan Area is made up by the following Sacramento County Assessor Parcel Numbers (APNs): 243-0192-012 through 243-0192-018.

SPECIFIC PLAN AREA AND SURROUNDING LAND USES

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 2.0-3). The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 190 feet above mean sea level (MSL).

2.2 PROJECT BACKGROUND

Since opening in 1972, Sunrise Mall has been a major commercial and social center of Citrus Heights, and generations of residents and visitors have patronized its many businesses and community events. Sunrise Mall is also an economic center for the City of Citrus Heights, providing hundreds of jobs and generating sales tax revenue that funds services for Citrus Heights residents.

The City of Citrus Heights recognizes the importance of Sunrise Mall within the community and aims to ensure that the Plan Area continues to be a regional and local destination. Given the changing retail environment and economic conditions, planning for the mall's future is a key step to ensuring the continued success of the city's core. In July 2019, the City Council adopted an Amendment to the General Plan that requires the development of a Specific Plan for the Sunrise Mall property to guarantee a comprehensive plan for future redevelopment of the mall. In October 2019, the city and its consultants began the process of developing a specific plan.

The proposed Sunrise Tomorrow Specific Plan is the result of a collaborative planning effort to develop a shared vision for the future of the heart of Citrus Heights. The project team studied the existing planning context, documented existing site conditions, and analyzed the current market

conditions in Citrus Heights and the greater Sacramento region. Throughout each phase of the project, opportunities were provided for the community to interact with the team and review the progress of the Plan. The community was encouraged to provide ideas and share feedback both on-line and in-person. The project team used this feedback to develop a vision statement, identifying the shared goals and aspirations for the project. Several plan options were developed, representing different ways of organizing development on the site in accordance with the vision. Metrics were provided for each of the options, including an economic impact analysis, which allowed for the city to evaluate the alternatives and identify a preferred option that best represents the shared goals and aspirations of stakeholders in a financially-viable and implementable way. The preferred option was then refined into a Specific Plan Concept and the project team prepared the Draft Specific Plan for review by the city and the community. Once approved, a final Specific Plan and Environmental Impact Report (EIR) will establish maximum development capacity and development standards for future development of the Plan Area.

2.3 PROJECT OBJECTIVES

Consistent with California Environmental Quality Act (CEQA) Guidelines Section 15124(b), a clear statement of objectives and the underlying purpose of the Specific Plan shall be discussed. The principal objective of the proposed Specific Plan project is the approval and subsequent implementation of the Sunrise Tomorrow Specific Plan. The quantifiable objectives of the proposed Specific Plan include the future development of up to 2,220 residential dwelling units (DU), up to 480 hotel rooms, up to 320,000 square feet (SF) of retail uses, up to 960,000 SF of office uses, up to 450,000 SF of community/institutional land uses, parking and other vehicular and non-vehicular circulation improvements, park and open space facilities, and utility improvements.

The Specific Plan has been designed to meet the following applicant project objectives:

- Create an economic engine with environments that promote economic activity and job creation by providing a mix of creative office space, food, dining, and entertainment.
- Design a dynamic Main Street and community gathering space by providing an abundance of open space for event programming and a strategically located main street in the core of the Plan Area.
- Establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns.
- Provide safe, convenient, and accessible access to high quality transit corridors with frequent headways and enhanced transit stops.
- Include streets designed for people, with a network of safe and slow speed streets that serve pedestrians and cyclists while allowing vehicular access and enhancing mobility, in order to reduce vehicle-miles-traveled (VMT) and associated greenhouse gas and criteria pollutant emissions.
- Create connected communities with various housing options and high quality of life by providing townhomes, lifestyle housing, senior housing, and mixed use residential.

- Provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential.
- Allow for phased development and infrastructure improvements to respond to market demand while requiring infrastructure and public facilities necessary to serve the project's needs.
- Transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with City General Plan Policy 12.3.

2.4 PROJECT DESCRIPTION

The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan would serve as the regulatory document for development of the site. The Specific Plan also includes a circulation and open space network to support the future land uses. See Figure 2.0-4 for the illustrative site plan, which shows an overview of the Plan Area, street network, and open space network.

SPECIFIC PLAN CONTENTS

The Sunrise Tomorrow Specific Plan is composed of several Chapters, including:

1. **Chapter 1 - Introduction:** This chapter provides background information, including the project location, existing conditions, and relationship to other plans.
2. **Chapter 2 – Vision:** This chapter describes the overall "Vision" and "Big Ideas" of the Sunrise Tomorrow Specific Plan.
3. **Chapter 3 - Framework & Policies:** This chapter describes the overall development concept in detail, including the planning areas and their maximum development allowances, and the policies for urban design and architectural character, land use, mobility, open space, and sustainability.
4. **Chapter 4 - Development Standards and Requirements:** This chapter provides details for each planning area and sub planning area, including purpose and intent, maximum allowed development, permitted uses, minimum and maximum building heights, minimum and maximum setbacks, parking standards, and open space standards.
5. **Chapter 5 - Street Design Standards:** This chapter provides details of the various street and path typologies and provides technical guidelines for each typology.
6. **Chapter 6 - Open Space Standards:** This chapter provides details of the open space typologies and provides technical guidelines for each typology.
7. **Chapter 7 - Infrastructure:** This chapter provides details and technical guidelines for infrastructure including grading, water, sanitary sewer, stormwater management, solid waste and recycling, energy use and generation, and communications.
8. **Chapter 8 - Administration and Implementation:** This chapter identifies how to administer the Specific Plan as well as implementation strategies and financing mechanisms for future development.

PLANNING AREAS

As shown in Figure 2.0-5, the Plan Area is divided into six Planning Areas:

1. **Planning Area 1 (PA-1):** Located in the northwestern corner of the Plan Area, PA-1 is envisioned to be an employment anchor with office space. Other uses include a hotel and retail uses.
2. **Planning Area 2 (PA-2):** Located in the west-central portion of the Plan Area, PA-2 is envisioned as the "Mixed-Use Core", to be developed with retail, restaurants, office, multi-family residential units and a hotel all positioned around the Sunrise Commons central gathering space and the main street.
3. **Planning Area 3 (PA-3):** Located in the southwestern corner of the Plan Area, PA-3 is envisioned as the "Anchor Entertainment" with retail and entertainment uses. In addition, the Planning Area is envisioned as a residential hub with stacked flats, townhouses, and senior housing units.
4. **Planning Area 4 (PA-4):** Located in the southeastern portion of the Plan Area, PA-4 is envisioned as "Anchor Retail and Mixed-Use" with retail uses along the main street. A portion of PA-4 would also feature town houses.
5. **Planning Area 5 (PA-5):** Located in the east-central portion of the Plan Area, PA-5 is envisioned as "Anchor Retail and Mixed-Use" along the main street with retail uses. A portion of PA-5 would also feature town houses.
6. **Planning Area 6 (PA-6):** Located in the northeastern corner of the Plan Area, PA-6 is envisioned to contain a hotel and restaurant uses.

DEVELOPMENT ALLOWANCE

The Specific Plan would establish a Maximum Development Allowance and Maximum Development by Land Use for each Planning Area. The Maximum Development Allowance by Planning Area is inclusive of all uses, and may not be exceeded without a Specific Plan Amendment.

Within each Planning Area, a maximum square footage would be established for all retail, office, community/institutional uses. For residential uses, a maximum number of dwelling units and for hotel uses a maximum number of rooms would be established. See Table 2.0-1 for the maximum development allowance and Table 2.0-2 for the maximum development allowance by land use.

As shown in Table 2.0-2, the 95.8-acre Plan Area could be developed with up to 2,220 residential DU, up to 480 hotel rooms, up to 320,000 SF of retail uses, up to 960,000 SF of office uses, and up to 450,000 SF of community/institutional land uses.

TABLE 2.0-1: MAXIMUM DEVELOPMENT ALLOWANCE

PLANNING AREA	*TOTAL*	*PA-1*	*PA-2*	*PA-3*	*PA-4*	*PA-5*	*PA-6*
Gross Site Area (Acres)	*95.8*	17.2	23.3	21.3	12.7	18.1	3.2
Net Site Area (Acres)*	*74.4*	14.5	16.3	14.8	11.0	13.9	3.2
Effective FAR**	*1.0*	0.70	1.55	0.75	1.0	1.0	0.5
Maximum Development (GSF)	*3,200,000*	445,000	1,110,000	485,000	480,000	610,000	70,000

NOTES: GSF = GROSS SQUARE FEET; FAR = FLOOR-AREA-RATIO.
**EXCLUDES INTERNAL ROADS.*
***CALCULATED BASED ON NET SITE AREA. FOR INFORMATION ONLY, MAXIMUM ALLOWED DEVELOPMENT DENOMINATED IN GROSS SQUARE FEET (GSF).*
SOURCE: GENSLER, 2020.

TABLE 2.0-2: MAXIMUM DEVELOPMENT BY LAND USE*

PLANNING AREA	*TOTAL*	*PA-1*	*PA-2*	*PA-3*	*PA-4*	*PA-5*	*PA-6*
Residential (Units)	*2,220*	220	620	360	480	540	0
Hotel (Rooms)	*480*	120	240	0	0	0	120
Retail (GSF)	*320,000*	60,000	160,000	52,000	20,000	20,000	8,000
Office (GSF)	*960,000*	280,000	220,000	0	220,000	240,000	0
Community/ Institutional (GSF)	*450,000*	24,000	34,000	12,000	160,000	220,000	8,000

NOTES: GSF = GROSS SQUARE FEET.
**MAXIMUM DEVELOPMENT BY LAND USE EXCLUDES THE AREA OCCUPIED BY EXISTING USES WHILE THEY CONTINUE TO OPERATE; HOWEVER, THE TOTAL BUILDING AREA (INCLUDING EXISTING AND NEW DEVELOPMENT) MAY NOT EXCEED THE MAXIMUM DEVELOPMENT ALLOWED PER PLANNING AREA.*
SOURCE: GENSLER, 2020.

To allow flexibility to respond to changing market conditions over time, the Specific Plan establishes processes for reviewing and approving development proposals with minor changes to development allowance by land use or development standards that otherwise comply with the overall intent and purpose of the Specific Plan. As long as the overall buildout is at or below the maximum development assumptions shown above, the environmental impacts disclosed in this environmental document would not increase.

As noted above, the Maximum Development Allowance by Planning Area is inclusive of all uses, and may not be exceeded without a Specific Plan Amendment. An amendment to the Specific Plan would be required if any of the following occurs:

- Introduction of a new type of land use not specifically discussed in the Specific Plan and not determined by the Community Development Director to be substantially similar in character and impact with a use discussed in the Specific Plan;

- A change to the Specific Plan, that could create new or significantly increase previously identified environmental impacts as determined strictly pursuant to the provisions of Public Resources Code Section 21166;
- Changes that would cause the total development to exceed the maximum allowed in the Planning Area where project is located or the Plan Area overall;
- Any change to the fundamental character of the development including any substantive change to the character of the commercial parcels, residential development, recreation and open space areas, or circulation pattern of the project;
- Implementation of any land use change that would affect compatibility of land uses;
- Significant changes to the plan area circulation pattern that would result in a substantial alteration of any land uses or circulation concepts set forth in this Specific Plan.

An amendment to the Specific Plan is not required for the following:

- Minor changes;
- Introduction of a new type of land use that is determined by the Community Development Director to be substantially similar in character and impact with a use discussed in the Specific Plan;
- Changes in the phasing of the Plan Area that do not change the overall balance of providing sufficient infrastructure for the development.

LAND USES

The proposed land use map is shown in Figure 2.0-6. The Specific Plan would define allowed land uses to ensure a mix of development that supports a livable urban neighborhood. Proposed land uses (including potential product types) include:

- **Residential:** Townhouses, multi-family lifestyle units (apartments, flats, and mixed use), and senior housing units.
- **Retail/Food/Beverage:** Anchor retail department stores, ground floor retail stores, movie theatres, music venues, grocery stores, restaurants, breweries, and bars.
- **Mixed Use:** Residential lofts above ground floor retail and office uses above ground floor retail.
- **Office:** Creative offices, tech offices, professional offices, and coworking spaces.
- **Community/Institutional:** Child care centers, gyms, and community centers.
- **Hotel:** Conference center hotel, boutique hotel, and extended stay hotel.
- **Parking Structure:** Surface parking, standalone parking structures, and wrapped parking structures.

STREET NETWORK

The proposed street network is shown in Figure 2.0-7. The Specific Plan would establish a network of streets, roadways, access points, and pedestrian and bicycle routes, allowing for easy access across the site. Proposed street typologies include:

- **Main Street:** Allows for flexible space that can easily be closed off for special events**.**
- **Primary Roads:** Allow for high capacity circulation with two lanes in each direction.
- **Primary Entries:** Allow for high capacity ingress and egress with two lanes in each direction.
- **Secondary Roads:** Allow for local circulation with one lane in each direction.
- **Secondary Entries:** Allow for moderate capacity ingress and egress with one lane ingress and egress.
- **Green Loop Pedestrian/Multi-use Trail:** Protected bike and walking path connecting between the project and surrounding land uses and within the project.

VEHICULAR CIRCULATION

The proposed vehicular circulation network is shown in Figure 2.0-8. The Specific Plan would provide for safe and efficient vehicular circulation. Proposed vehicular improvements and typologies include:

- **Vehicle Roadways:** Allow for efficient vehicular circulation of the site and create connections between the project and surrounding land uses and within the project.
- **Driveways & Entry Points:** Access points to various destinations within the site.
- **Loading:** Service access for delivery trucks.
- **Drop Off:** Access for rideshare pickup and drop off.
- **Primary Vehicular Entries:** Allow for two lanes in each direction.
- **Secondary Vehicular Entries:** Allow for one lane in each direction.
- **New Traffic Signal:** A traffic signal would be added, replacing an existing right-in/right-out entry to manage the flow of traffic into the site and improved connections to the Marketplace at Birdcage.
- **Enhanced Pedestrian Crossings and Intersection Treatments:** Improvements to at-grade pedestrian connections to the adjacent Marketplace at Birdcage.
- **Parking Structure:** Multi-level parking structure
- **Surface Lot:** Ground level surface parking.

PEDESTRIAN AND BICYCLE NETWORK

The proposed pedestrian and bicycle circulation network is shown in Figure 2.0-9. The Specific Plan would establish a network of pedestrian and bicycle routes, allowing for easy access across the site. Proposed pedestrian and bicycle improvements and typologies include:

- **Sidewalks:** Walking paths surrounding many future buildings with connections between the project and surrounding land uses and within the project.
- **Pedestrian Paseos:** Wide and flexible paths with connections between the project site and surrounding uses.
- **Green Loop Pedestrian/Multi-Use Trail:** Protected path through the site, connecting the project and surrounding land uses and land uses within the project site.
- **Plazas and Parks:** Public parks located throughout the site.

- **Temporary Festival Street:** Flexible space along the main street spine allowing for large, temporary street festivals and events.
- **Transit Center:** A future transit center would be strategically located along Sunrise Boulevard. The transit center would be designed to host conventional busses as well as adaptable to meet future transit needs.
- **Enhanced Pedestrian Crossings and Intersection Treatments:** Improvements to at-grade pedestrian connections to the adjacent Marketplace at Birdcage.

OPEN SPACE NETWORK

The proposed open space network is shown in Figure 2.0-10. The Specific Plan would create a green network of parks, plazas, and streets that are safe and connected with an abundance of sustainably grown vegetation. Proposed open space features include:

- **Green Loop Pedestrian/Bicycle Trail:** Protected path through the site, connecting the project and surrounding land uses and land uses within the project site.
- **Pedestrian Paseo/Walk Streets:** Wide flexible paths with connections between the project and surrounding land uses and within the project.
- **Sunrise Steps:** Public outdoor seating at the base of the major office building.
- **Main Street:** Flexible open space for events.
- **Fountains:** Public fountain and play area within Sunrise Commons gathering place.
- **Tented Event Plaza:** Public event space along Sunrise Boulevard.
- **Creek Trail:** Public trail adjacent to creek along Sunrise Boulevard.
- **Urban "Agrihood":** Community garden along Sunrise Boulevard.
- **Neighborhood Park:** Public park connecting the project and surrounding land uses and land uses within the project site.
- **Sunrise Commons:** Central gathering space equipped for large events.
- **Community Green:** Private parks for housing communities.
- **Medical Green:** Potential open space for medical complex.
- **Shared Green Streets:** Landscaped streets with a large tree canopy.

SUSTAINABILITY

The proposed open space network is shown in Figure 2.0-11. The Specific Plan would incorporate best practices to support sustainable development, including:

- **Existing/Protected Trees:** The existing tree canopy would be preserved wherever possible.
- **New Tree Canopy:** New trees would be planted all across the site, creating a large protective tree canopy.
- **Restored Creek & Native Habitat:** The box culvert could be removed to expose the creek and restore the natural habitat.
- **Bioswale/Run-off Collection:** Low impact development strategies and source control measures would be incorporated to treat storm water and reduce runoff.

- **Large Permeable Green Surfaces:** These areas would allow water to percolate into the soil to filter out pollutants and recharge the water table.
- **Solar Roof Opportunity Sites:** Renewable energy sources would include solar energy produced within the project site.

A tributary to the Arcade Creek called San Juan Creek (located in the southwestern corner of the Plan Area along Sunrise Boulevard) was previously buried and undergrounded as part of the original Sunrise Mall construction. As part of the proposed Specific Plan, this existing on-site creek may be uncovered and restored, and the associated native riparian habitat may be restored. A public trail may be provided adjacent to the restored creek.

PHASING

The proposed phasing plan is shown in Figure 2.0-12. The Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. Due to the uncertainty and unpredictability of these three factors (site availability, market demand and absorption, and development feasibility), the phasing plan shown below may fluctuate. The phasing plan includes:

- **Phase 1 - Ready to Go:** Initial development is anticipated to include: redevelopment of the former Sears as a dining entertainment district, retail, limited-service hotel, open space, and up to 245 DU.
- **Phase 2 - Employment Anchor:** Phase 2 development is anticipated to include redevelopment of Macy's Men & Home as creative office campus, additional retail and dining, extended stay hotel, neighborhood park, and up to 135 townhomes.
- **Phase 3 - Mixed-Use Main Street:** Phase 3 development is anticipated to include redevelopment of Sunrise Mall as a mixed-use main street with retail, dining, office, residential, full-service hotel, and central open space.
- **Phase 4 - Longtime Opportunities:** Potential Phase 4 development could include the redevelopment of JC Penney and Macy's Women as a mixed-use district with office, retail, open space, and residential.

UTILITIES

Similar to the existing Sunrise Mall located on-site, future development allowed under the proposed Specific Plan would connect to city or outside utility provider infrastructure to provide water, sewer, storm drainage, and other utilities. Existing storm drain, sewer, water, electric, telecommunication, and gas lines/pipes are currently located on-site and along the various surrounding roadways, including but not limited to Arcadia Drive, Greenback Lane, and Sunrise Boulevard. Demolition and the re-routing of most of the existing utilities would be required as part of the Specific Plan implementation. Infrastructure pipe/conduit sizing, layout, and location may change as part of final engineering; however, none of those items would require an amendment to the Specific Plan. Proposed utilities infrastructure would include water (for domestic use and fire use), sanitary sewer, storm drain, gas main, electrical, and telecommunications.

The Plan Area would be served by the following existing service providers:

1. Citrus Heights Water District for water;
2. Sacramento Area Sewer District for wastewater collection
3. Regional San for wastewater treatment;
4. City of Citrus Heights for stormwater collection;
5. Pacific Gas and Electric Company for gas;
6. Sacramento Municipal Utility District for electricity.

The Plan Area is currently generally flat and constructed as a mound-type site, with gradual slopes draining away from the existing site buildings (center of the site), towards the site perimeter. In its current condition, the Plan Area does not experience any known (significant) local flooding. There are no known locations with backup issues at any intake/outfall locations and the site does not fall within the 100-year flood level area. The south side of the Plan Area property generally flows south and west towards Macy's Plaza Drive, where drainage ultimately outfalls into an existing double four-foot by eight-foot box culvert that drains into San Juan Creek. The northern section of the Specific Plan area property ultimately outfalls into a 30-inch storm drain pipe under Arcadia Drive where it drains north across Greenback Lane towards the Mitchell Village/Farms subdivision.

The proposed storm drainage system is shown in Figure 2.0-13. As shown, storm drain infrastructure would be located throughout the Plan Area, including but not limited to within roadway right-of-ways, parking areas, and pedestrian pathways. There should be no need to modify or up-size any off-site storm drainage mains in order to collect on-site drainage, outside of adding any new connections to them that are not part of the Specific Plan (or existing pipes that could remain, but are found to be depleted and/or inoperative). As noted above, the existing box culvert could be removed to expose San Juan Creek and restore the natural habitat.

The Specific Plan may remove and construct an existing dual box culvert at the southwest corner of the site that carries local drainage into Arcade Creek. In order to potentially open this drainage area up as a greenway for aesthetics on the site, the embankment and fill over the dual box-culvert would be removed up to the roadway limits, both on- and offsite. Should the creek restoration be completed, the embankment and grading would need to be reconstructed to creek levels and any construction within the creek channel would need to meet all associated permit requirements, etc. A new headwall and wing walls would need to be constructed at the intake section of the dual box culvert, but existing storm drain flows and patterns are not anticipated to be affected.

Best management practices (BMPs) will be applied to future development to limit the concentrations of constituents in any site runoff to acceptable levels. Stormwater flows from the Plan Area would be directed to stormwater treatment basins, treatment planters, and bioretention areas by an improved stormwater conveyance system on-site. Stormwater runoff would not be allowed to discharge directly to the existing storm drains without first discharging to the bioretention areas. Low impact development strategies and source control measures will be incorporated to treat storm water and reduce runoff. Additionally, erosion and sediment control measures would be implemented during construction.

With the Specific Plan proposing items such as a public park, open landscape areas, and multiple locations to catch surface drainage, the total impervious surface area would be reduced when compared to existing conditions, which would lead to an overall reduction in surface runoff. The Specific Plan redevelopment allows for incorporation of some Low Impact Development (LID) options provided in the Sacramento Stormwater Quality Partnership (SSQP); design would need to meet the SSQP Stormwater Quality Design Manual. LID design tries to emulate pre-urban development and hydrological conditions of natural watershed processes on site. LID typically directs stormwater runoff to natural vegetated systems such as landscape planters, vegetated swales, and rain gardens that reduce, filter, percolate, and/or slow the surface runoff before it enters the public storm drain system. Treatment Control Measures are intended to filter and settle pollutants out of runoff before it travels off the site.

This portion of the City of Citrus Heights does not require Hydromodification as a control measure with their LID requirements. The City of Citrus Heights implements the NPDES/MS4 Permit in a partnership with other public agencies within Sacramento County and follows the standards and requirements per SSQP.

GENERAL PLAN AND ZONING

The General Plan and zoning for the Plan Area are discussed in detail below.

General Plan

The Plan Area is designated as General Commercial by the City's General Plan Land Use Map (Figure 2.0-14). The General Commercial land use designation provides for retail uses, services, restaurants, professional and administrative offices, hotels and motels, mixed-use projects, multi-family residences, public and quasi-public uses, and similar and compatible uses. The floor-area-ratio (FAR) for nonresidential uses with this designation shall not exceed 0.6. Residential densities shall not exceed 40 units per net acre.

The densities and intensities proposed by the Specific Plan are not supported by the existing General Commercial land use designation. As such, the proposed Specific Plan would require the creation of a new land use category, Marketplace Mixed Use, to the General Plan. The density for the Marketplace Mixed Use land use category would be in accordance with the adopted Specific Plan. The proposed land use is shown in Figure 2.0-15.

Zoning

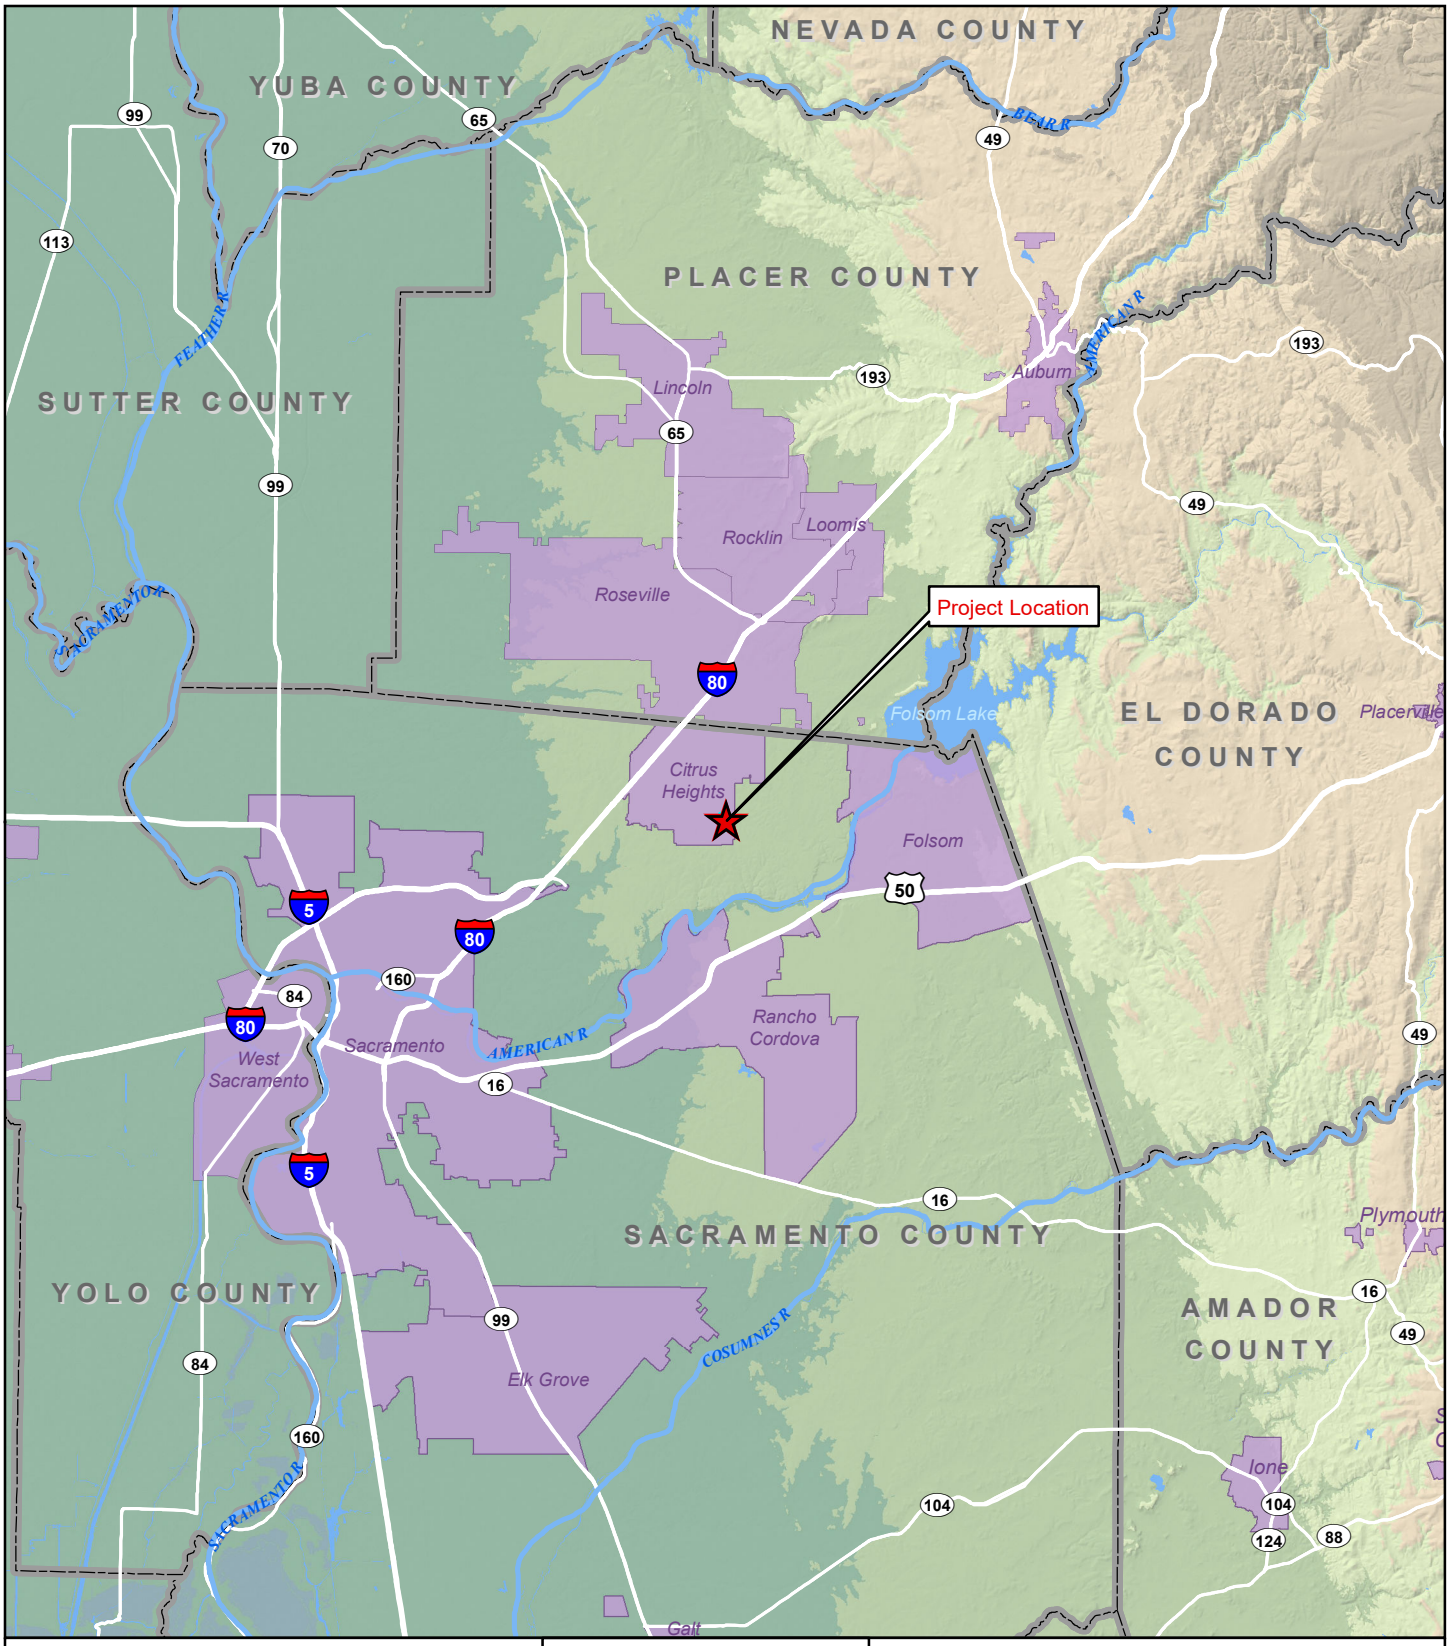
The Plan Area is zoned as Shopping Center (Figure 2.0-16) by the City. The Shopping Center zoning district is applied to areas appropriate for a wide range of retail and service land uses, promoting the unified grouping of these uses with convenient off-street parking and loading. Residential uses may also be accommodated as part of mixed-use projects. Projects within this zone are intended to be designed to be an integral part of the surrounding neighborhood, and the larger community. The Shopping Center zoning district is consistent with the General Commercial land use designation of the General Plan. The Shopping Center zone allows for up to 40 units per net acre.

The proposed Specific Plan would require a rezone of the entire Plan Area to the City's Special Planning Area district. Chapter 106.50 of the City of Citrus Heights Municipal Code outlines the development standards for the Special Planning Area district. The purpose of this zoning district is to allow consideration of innovation in site planning and other aspects of project design, and more effective design responses to site features, uses on adjoining properties, and environmental impacts than the Zoning Code standards would produce without adjustment. The proposed zoning is shown in Figure 2.0-17.

2.5 ENTITLEMENT REQUESTS AND OTHER APPROVALS

The City of Citrus Heights is the Lead Agency for the proposed Specific Plan, pursuant to the State Guidelines for Implementation of CEQA, Section 15050.

This document will be used by the City of Citrus Heights to take the following actions:



- Approval of the Specific Plan;
- Approval of the General Plan Amendment to change the land use designation of the entire Plan Area from General Commercial to Marketplace Mixed Use;
- Approval of the rezone of the entire Plan Area from Shopping Center to Special Planning Area;
- Future building, grading, and other permits as necessary for future construction;
- Certification of the EIR;
- Adoption of the Mitigation Monitoring and Reporting Program (MMRP).

The following agencies may be required to issue permits or approve certain aspects of the proposed Specific Plan:

- Regional Water Quality Control Board (RWQCB) – Construction activities would be required to be covered under the National Pollution Discharge Elimination System (NPDES);
- RWQCB – A Storm Water Pollution Prevention Plan (SWPPP) would be required to be approved prior to construction activities pursuant to the Construction General Permit (CGP) issued by the SWQCB and the Clean Water Act;
- RWQCB – A Clean Water Section 401 Water Quality Certification and/or Waste Discharge Requirement Permit may be required for creek restoration;
- California Department of Fish and Wildlife (CDFW) – A Section 1600 Permit may be required for the optional creek restoration;
- U.S. Army Corps of Engineers (USACE) – A Section 404 permit may be required for the optional creek restoration;
- Sacramento Metropolitan Air Quality Management District (SMAQMD) – Construction activities would be subject to the SMAQMD rules and regulations;
- Citrus Heights Water District – Approval of infrastructure details for water supply facilities;
- Sacramento Area Sanitation District – Approval of infrastructure details for wastewater collection facilities;

- Sacramento Municipal Utility District (SMUD) – Approval of infrastructure details for electricity facilities; and
- Pacific Gas & Electric (PG&E) – Approval of infrastructure details for natural gas facilities.

The following sections of the EIR (Sections 3.1 through 3.13) contain a detailed environmental analysis of the existing conditions, Specific Plan impacts (including direct and indirect, short-term, long-term, and cumulative impacts), recommended mitigation measures, and unavoidable significant impacts. The following sections analyze those environmental issue areas where potentially significant impacts may occur, as stated in the Notice of Preparation (Appendix A of this EIR).

The EIR examines environmental factors outlined in Appendix G of the CEQA Guidelines, Environmental Checklist Form, as follows:

- 3.1, Aesthetics and Visual Resources
- 3.2, Air Quality
- 3.3, Cultural and Tribal Resources
- 3.4, Geology and Soils
- 3.5, Greenhouse Gases, Climate Change, and Energy
- 3.6, Hazards and Hazardous Materials
- 3.7, Hydrology and Water Quality
- 3.8, Land Use and Planning
- 3.9, Noise
- 3.10, Population and Housing
- 3.11, Public Services and Recreation
- 3.12, Transportation and Circulation
- 3.13, Utilities and Service Systems

As indicated in the Notice of Preparation (refer to Appendix A), no significant impacts upon agriculture/forestry resources, biological resources, mineral resources, or wildfire are anticipated. These issue areas are addressed in in the Initial Study prepared for the Sunrise Tomorrow Specific Plan (refer to Appendix A).

Each potentially significant environmental issue area is addressed in a separate section of the EIR and is organized into three subsections, as follows:

- "Environmental Setting" describes the physical conditions that exist at the present time and that may influence or affect the issue under investigation.

- "Regulatory Setting" lists and discusses the laws, ordinances, regulations, and standards that apply to the Specific Plan.

- "Impact and Mitigation Measures" provides the thresholds that are the basis of conclusions of significance, which are primarily the criteria in Appendix G of the CEQA Guidelines (14 California Code of Regulations §§ 15000 – 15387), as well as the discussion of the potential environmental changes.

  Primary sources used in identifying the criteria include the CEQA Guidelines; local, State, Federal, or other standards applicable to an impact category; and officially established

significance thresholds. "... An ironclad definition of significant effect is not possible because the significance of any activity may vary with the setting" (CEQA Guidelines Section 15064[b]). Principally, "... a substantial, or potentially substantial, adverse change in any of the physical conditions within an area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic and aesthetic significance" constitutes a significant impact (CEQA Guidelines Section 15382).

"Impacts and Mitigation Measures" describes potential environmental changes to the existing physical conditions that may occur if the proposed project is implemented. Evidence, based on factual and scientific data, is presented to show the cause and effect relationship between the proposed project and the potential changes in the environment. The exact magnitude, duration, extent, frequency, range or other parameters of a potential impact are ascertained, to the extent possible, to determine whether impacts may be significant; all of the potential direct and reasonably foreseeable indirect effects are considered.

When these impacts, even with the inclusion of mitigation measures, cannot be mitigated to a level considered less than significant, they are identified as "unavoidable significant impacts."

"Mitigation Measures" are measures that would be required of the project to avoid a significant adverse impact; to minimize a significant adverse impact; to rectify a significant adverse impact by restoration; to reduce or eliminate a significant adverse impact over time by preservation and maintenance operations; or to compensate for the impact by replacing or providing substitute resources or environment.

This section provides an overview of the visual character, scenic resources, views, scenic highways, and sources of light and glare that are encountered in the Plan Area and the surrounding area. This section concludes with an evaluation of the impacts and recommendations for mitigating impacts. Information in this section is derived primarily from the following:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- *Citrus Heights Municipal Code* (current through May 26, 2020).

There were no comments received during the public review period for the Notice of Preparation regarding aesthetics and visual resources.

As discussed in the Initial Study for the proposed Specific Plan (see Appendix A), the Plan Area is not located adjacent to or in the vicinity of a state scenic highway. The project would have no impact related to the potential to substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, within a state scenic highway. As such, impacts related to state scenic highways would be ***less than significant***.

3.1.1 ENVIRONMENTAL SETTING

REGIONAL SETTING

The existing visual character of Citrus Heights is mainly suburban and largely developed. Less than two percent of the City's total land area is vacant. The City is primarily residential with commercial located along its major traffic corridors and at major roadway intersections. These traffic corridors are described in more detail, below. Higher density residential development tends to be closest to these corridors, while lot sizes generally increase as distances from roadways/intersections and commercial uses increase. Very low-density residential uses can be found in the north-central portion of the City, where the character is more rural and limited sidewalks and small-scale hobby farming/animal activities maintain more of a presence. Parks and public uses such as civic buildings, schools, and post offices are scattered throughout the City, primarily located along major roadways. Undeveloped, natural habitat in the City is limited to riparian areas located along creeks, with few isolated pockets of native grassland and oak savanna remaining.

Views within the City are characterized by urban development and its associated infrastructure (i.e., roadways). Some of the more rural portions of the City, particularly in the northern portion of the City have more mature trees and vegetation than the highly developed areas. The majority of the planning area is urbanized and contains significant existing sources of light and glare, such as street lights along roadways, parking lots and walkways, lighted recreation facilities and light emitted from residential and non-residential buildings. Buildings and structures made with glass, metal and polished exterior or roofing materials exist throughout the planning area; combined with existing natural and manmade light sources, these can constitute a source of localized glare. The more rural, less dense areas of the City do not contain as many of these light sources, but their

proximity to light sources in other portions of the City leave them exposed to light pollution and glare.

The City's General Plan Planning Area has no designated scenic vistas.

PLAN AREA AND SURROUNDING AREA

The Sunrise Tomorrow Specific Plan Area ("Specific Plan Area" or "Plan Area") is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights. The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas. The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west.

LIGHT AND GLARE

There are two typical types of light intrusion. First, light emanates from the interior of structures and passes out through windows. Secondly, light emanates from exterior sources such as street lighting, security lighting, balcony lighting, and landscape lighting. "Light spill" is typically defined as the presence of unwanted and/or misdirected light on properties adjacent to the property being illuminated.

Glare is the sensation produced by luminance within the visual field that is significantly greater than the luminance to which the eyes are adapted, which causes annoyance, discomfort, or loss in visual performance and visibility.

The Plan Area currently has ample sources of light and glare. Street lighting exists on Greenback Lane, Sunrise Boulevard, and other nearby residential streets, such as Sunrise Vista Drive, east of the Plan Area. Building and parking lot lighting is located throughout the Plan Area. Sources of daytime glare include direct beam sunlight and reflections from windows, architectural coatings, glass and other shiny reflective surfaces. Nighttime light illumination and associated glare can be divided into stationary and mobile sources. Stationary sources of nighttime light include structure illumination, decorative landscape lighting, lighted signs, and streetlights. The source of mobile nighttime light is primarily headlights of motor vehicles driving within and through the area. During winter nighttime hours, the ambient light in the Plan Area can be accentuated during periods of low cloudiness or fog, which reflects light, resulting in intensification of the amount of light.

3.1.2 REGULATORY SETTING

LOCAL

Citrus Heights General Plan

The Citrus Heights General Plan contains the following goals and policies that are relevant to aesthetics and visual resources:

COMMUNITY DEVELOPMENT ELEMENT

Goal 3: Maintain safe and high-quality neighborhoods.

Policy 3.4: Enhance the visual quality of City neighborhoods.

Goal 10: Achieve attractive, inviting, and functional corridors.

Policy 10.1: Require superior architectural and functional site design features for new development projects along major corridors.

Policy 10.2: Design buildings to revitalize streets and public spaces and to enhance a sense of community and personal safety.

Policy 10.3: Discourage trademark or generic architecture in order to provide unique visual interest in Citrus Heights.

Policy 10.4: Encourage high quality signage that is attractive, appropriate to the location and balances visibility needs with aesthetic needs.

Policy 10.5: Improve the appearance of the City by creating livelier, friendlier, safer spaces through the artful illumination of buildings, streetscapes, walkways, plazas, public art and other highlights.

Policy 10.7: Require removal of abandoned, unsafe, or unsightly buildings where such action is preferable to rehabilitation.

Goal 19: Establish and maintain attractive streetscapes along the City's major roadways.

Policy 19.1: Promote improvements to major corridors to make them more distinctive and inviting. Encourage installation and maintenance of landscaping in median and street frontages along arterial roadways.

Policy 19.2: Establish a street tree planting program for major corridors.

Policy 19.3: Require landscaping on commercial, residential, and institutional uses adjacent to all public street frontages.

Policy 19.4: Monitor and enforce the maintenance of landscaping on private property along major corridors

RESOURCE CONSERVATION ELEMENT

Goal 36: Preserve, protect and increase plantings of trees within the City.

Policy 36.1: Incorporate existing trees into development projects. Avoid adverse effects on health and longevity of native oaks or other significant trees through appropriate design measures and construction practices. When tree preservation is not possible, require appropriate tree replacement.

Goal 39: Create open spaces in future urban development with natural features for public use and enjoyment.

Policy 39.1: Provide for appropriate open space amenities in new development, protecting existing usable open space to the extent feasible.

Policy 39.3: Require buildings to conform to existing natural topography, and minimize cutting and filling.

City of Citrus Heights Municipal Code

Chapter 106.34, Landscaping Standards, of the Municipal Code establishes requirements for landscaping to enhance the appearance of development, provide shade, reduce heat and glare, control soil erosion, conserve water, screen potentially incompatible land uses, enhance the quality of neighborhoods, improve air quality, and improve pedestrian and vehicular traffic and safety.

Chapter 106.35, Outdoor Lighting, of the Municipal Code provides requirements for outdoor lighting within the City to:

A. Promote a safe and pleasant nighttime environment for residents;
B. Protect and improve safe travel for all modes of transportation;
C. Prevent nuisances caused by unnecessary light intensity, direct glare, and light trespass;
D. Protect the ability to view the night sky by restricting unnecessary upward projection of light; and
E. To promote lighting practices and systems to conserve energy.

Chapter 106.39, Tree Preservation and Protection, of the Municipal Code provides regulations for the protection, preservation, and maintenance of:

A. Native oak trees;
B. The habitat values of oak woodlands;
C. Trees of historic or cultural significance;
D. Groves and stands of mature trees; and
E. Mature trees in general that are associated with proposals for development.

3.1.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, except as provided in Public Resources Code Section 21099, the Specific Plan will have significant impact on aesthetics if it will:

- Have a substantial adverse effect on a scenic vista;
- In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings. (Public views are those that are experienced from publicly accessible vantage point). If the Specific Plan is in an urbanized area, would

the Specific Plan conflict with applicable zoning and other regulations governing scenic quality; and/or

- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

IMPACTS AND MITIGATION MEASURES

Impact 3.1-1: Specific Plan implementation would not result in substantial adverse effects on scenic vistas and resources and would not conflict with applicable zoning and other regulations governing scenic quality (Less than Significant)

The Specific Plan site is not designated as a scenic vista by the City of Citrus Heights General Plan, nor does it contain any unique or distinguishing features that would qualify the site for designation as a scenic vista.

The Plan Area is located in an urbanized area and is currently developed with the Sunrise Mall. Impacts related to a change in visual character and scenic quality are largely subjective and very difficult to quantify. People have different reactions to the visual quality of a Specific Plan or a Specific Plan feature, and what is considered "attractive" to one viewer may be considered "unattractive" to other viewers. Implementation of the Specific Plan would change the existing visual character of the site from a centrally-located mall site surrounded by parking areas to a fully developed mixed use community. Development of the Specific Plan would convert the site from its existing use as a developed site containing the Sunrise Mall and associated parking areas to a developed site containing residential, retail, mixed use, office, community, hotel, and parking uses.

Specific Plan implementation would result in the demolition of the existing buildings and redevelopment of the entire property with up to 2,220 residential dwelling units (DU), up to 480 hotel rooms, up to 320,000 square feet (SF) of retail uses, up to 960,000 SF of office uses, up to 450,000 SF of community/institutional land uses, parking and other vehicular and non-vehicular circulation improvements, park and open space facilities, and utility improvements. Building heights would range from 20 to 120 feet, with the majority of structures between 20 and 60 feet tall. The tallest structure, located in the mixed use core area, would be centrally located and away from existing residential uses.

Figure 3.1-1 shows existing and proposed views of the Plan Area, and Figure 3.1-2 shows other proposed views of the Plan Area. The Specific Plan would create a green network of parks, plazas, and streets that are safe and connected with an abundance of sustainably grown vegetation. In addition to the substantial amount of landscaping and open space areas, the Specific Plan would include visual components that would assist in enhancing the appearance of the site following site development. The proposed Specific Plan includes Sitewide Development Standards, Street Design Standards, and Open Space Design Standards. These Standards include standards for building quality and facades, building placement and orientation, circulation, public spaces and pedestrian amenities, massing scale and form, entryways, signage, parking, and design character. The Standards create a framework within which developers, builders, and designers can have flexibility

to create unique and desirable design opportunities, while ensuring the Plan Area is developed with a cohesive theme.

The Specific Plan includes land use policies which would ensure quality design and compatibility with adjacent development. For example, one of the land use policies states: Development shall be designed to minimize impacts to adjacent residential communities. Along the southern and eastern edges of the Plan Area, adjacent to existing residential uses, development shall be limited to residential and community uses. Within these areas, height restrictions, setbacks, and open space requirements are established to minimize the visual impact of development on existing residents." Additionally, the Development Standards chapter of the Specific Plan discusses how the proposed residential uses would transition to the existing residential uses adjacent to the site. For example, the residential uses proposed in Planning Area 4, which are located adjacent to low and medium density residential uses to the south and east of the Plan Area, would be characterized by a mix of medium density, low-rise multi-family housing development and a large public park. Located at the south-east corner of the site, the neighborhood park in Planning Area 4 would function as a community gathering space for families and residents on and off site.

Further, the proposed Specific Plan includes approximately 9.1 acres of open space and ample recreation facilities, such as multi-use trails, plazas, and public recreation areas (such as the Sunrise Steps, the public event space along Sunrise Boulevard, and the community green). As such, the Specific Plan would provide a substantial amount of passive open space, parkland and recreational amenities. These facilities would improve the scenic quality of the Plan Area.

While implementation of the Specific Plan would change the existing visual character of the site, it would not result in substantial adverse effects on a designated scenic vista. The Specific Plan would result in the redevelopment of the mall site, which would contribute to changes in the regional landscape and visual character of the area. In order to reduce visual impacts, development within the Plan Area would be required to be consistent with the General Plan and the Municipal Code, which include design standards in order to ensure quality and cohesive design of the Plan Area. As noted previously, the proposed Development Standards, Street Design Standards, and Open Space Design Standards are intended to reflect the City's desires relative to land planning, as well as individual site design and architecture. The guidelines and standards set forth in the Specific Plan are applicable to all future development in the Plan Area and cover a wide range of topics from general circulation and Specific Plan signage to landscaping and sustainable development.

Various temporary visual impacts could occur as a result of construction activities as the Specific Plan develops, including grading, equipment and material storage, and staging. Though temporary, some of these impacts could last for several weeks or months during any single construction phase. These construction-related impacts would be temporary and viewer sensitivity in the majority of cases would be slight to moderate.

While future development consistent with the proposed Specific Plan would change and alter the existing visual character of the Plan Area, these changes would not degrade the visual quality of

the site or the surrounding areas. The proposed buildings would incorporate a mix of materials, architectural features, varied roof lines, building recesses and articulation which provide visual interest and maintain the City's urban character. The extensive use of landscaping around the perimeter of the Plan Area would partially shield views of the interior areas of the site from the surrounding viewsheds. Extensive landscaped areas would provide for visually pleasing amenities throughout the Plan Area. This EIR acknowledges that project implementation would alter the existing visual character of the Plan Area; however, this alteration would not substantially degrade the visual quality of the Plan Area, and the Specific Plan would not conflict with applicable zoning and other regulations governing scenic quality. Therefore, this is considered a ***less than significant*** impact, and no additional mitigation is required.

Impact 3.1-2: Specific Plan implementation would not result in substantial light or glare which would adversely affect day or nighttime views in the area (Less than Significant)

Implementation of the Specific Plan would introduce new sources of light and glare into the Plan Area.

GLARE

New sources of glare would occur primarily from the windshields of vehicles travelling to and from the Specific Plan site and from vehicles parked at the site. Glare associated with lighting is discussed under Lighting below. Parking areas would be provided throughout the Plan Area and would not be located immediately adjacent to any of the light sensitive land uses in the vicinity of the Plan Area, such as the residential uses to the east and south. Headlights and windshields would be shielded by the proposed mixed use structures and proposed landscaping amenities. Additionally, Section 106.35.040(A) of the City's Municipal Code states that "outdoor lighting fixtures shall be designed, located, installed, aimed downward or toward structures, and maintained in order to prevent glare, light trespass, and light pollution." Proposed lighting would be subject to the City's Municipal Code requirements related to light and glare.

The Specific Plan includes plans for extensive landscaping and open space areas throughout the site, which would provide visual screening and block potential windshield glare to areas surrounding the Plan Area. Additionally, due to the developed nature of the Plan Area and the City as a whole, the majority of the City is a source of and is exposed to light and glare. Due to the distances between the sources of windshield glare and the nearest sensitive receptors, impacts from glare would be ***less than significant***.

LIGHTING

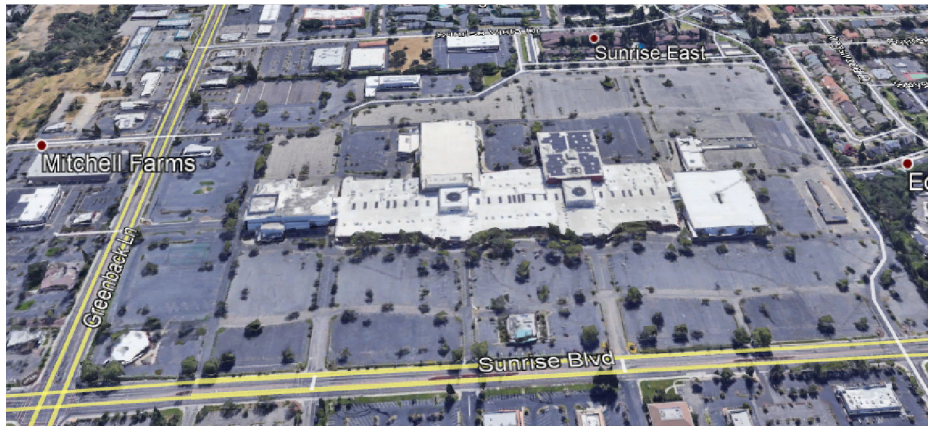
While the Plan Area currently contains ample lighting sources, implementation of the Specific Plan would introduce new sources of lighting, including sources which may result in increased nighttime lighting or glare in the vicinity. A detailed lighting plan has not been prepared for the Specific Plan, but for the purposes of this analysis, it has been conservatively assumed that exterior lighting would be located throughout most of the outdoor areas of the Plan Area, including in the retail,

residential, mixed use, office, community, parking, and hotel uses, and along the landscaped sidewalks and trails. This includes, but is not necessarily limited to: street lighting in the residential areas; exterior lighting on the buildings; lighting for the bicycle and pedestrian paths; courtyard lighting; parking lot lighting for guest parking in the multifamily areas; and lighting of park and recreation facilities.

The Specific Plan includes the following Sitewide Development Standards related to building lighting:

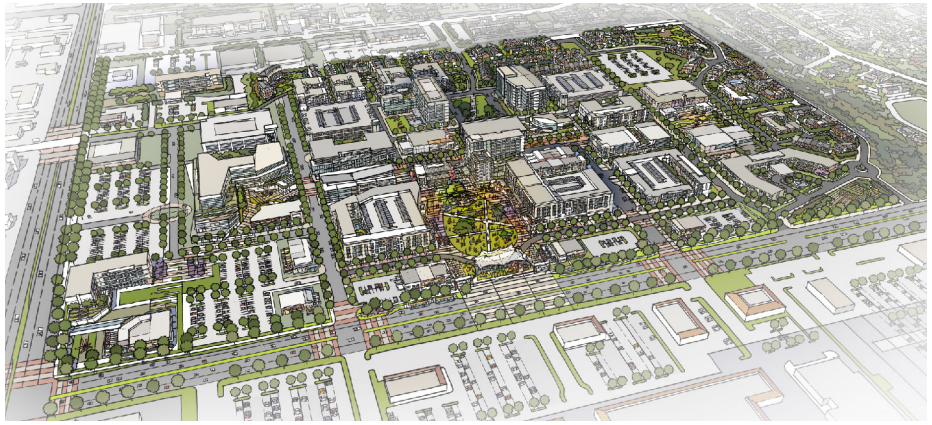
- Building lighting shall be designed to reduce off-site glare. Eliminate light spill from interior and exterior lighting by utilizing full cut off luminaries and shielding.
- Building lighting shall incorporate energy-saving features, including light control systems to reduce light levels during low-usage times while not sacrificing uniformity or safety.
- All surface parking lots and structures shall provide appropriate lighting directed away from surrounding land uses and towards the specific location intended for illumination.

Additionally, the Specific Plan includes the following policies related to lighting:



- Street lighting poles and fixtures should be designed to be pedestrian scaled and positioned as a unifying element site-wide. These fixtures should be architecturally compatible with structures and all other lighting fixtures on-site.
- Select and locate all lighting fixtures to shield or confine light spread beyond the street and sidewalk.
- Provide lighting levels that are adequate for visibility and security. All roadways, pedestrian pathways, and parking facilities should be well-illuminated.
- Street lighting shall be 3000K in color temperature.

Chapter 106.35, Outdoor Lighting, of the Municipal Code provides requirements for outdoor lighting within the City to:



A. Promote a safe and pleasant nighttime environment for residents;
B. Protect and improve safe travel for all modes of transportation;
C. Prevent nuisances caused by unnecessary light intensity, direct glare, and light trespass;
D. Protect the ability to view the night sky by restricting unnecessary upward projection of light; and
E. To promote lighting practices and systems to conserve energy.

Additionally, compliance with Chapter 106.35, Outdoor Lighting, of the Municipal Code would ensure that all exterior lighting associated with the Specific Plan is properly shielded and directed downward in order to eliminate light trespass onto adjacent properties, and reduces impacts to "dark skies" to the greatest extent feasible. Implementation of the City's Outdoor Lighting Ordinance and the Specific Plan Development Standards would ensure the impact is ***less than significant***.

This section provides a general description of regional air quality, the current attainment status of the air basin, local sensitive receptors, emission sources, and the impacts that are likely to result from Specific Plan implementation. Following this discussion is an assessment of consistency of the Specific Plan with applicable policies and local plans. The Greenhouse Gases, Climate Change and Energy analysis is located in Section 3.5. This section is based in part on the following documents, reports, and studies:

- *Air Quality and Land Use Handbook: A Community Health Perspective* (California Air Resources Board, 2005);
- *California Emissions Estimator Model* (CalEEMod), v.2016.3.2 (California Air Pollution Control Officers Association [CAPCOA], 2017);
- *Guidance to Address the Friant Ranch Ruling for CEQA projects in the Sac Metro Air District* (SMAQMD, 2020);
- *Guide to Air Quality Assessment in Sacramento County (CEQA Guide)* (SMAQMD, 2020).

One comment was received during the public review period or scoping meeting for the Notice of Preparation regarding this topic from the Sacramento Metropolitan Air Quality Management District (SMAQMD) (September 1, 2020). This comment is addressed within this section. Full comments received are included in Appendix A.

3.2.1 ENVIRONMENTAL SETTING

SACRAMENTO VALLEY AIR BASIN

The City of Citrus Heights is located within the Sacramento Valley Air Basin (SVAB). The SVAB encompasses eleven counties including all of Shasta, Tehama, Glenn, Colusa, Butte, Sutter, Yuba, Sacramento, and Yolo Counties, the westernmost portion of Placer County and the northeastern half of Solano County. The SVAB is the northern half of California's Great Valley and is bordered on three sides (west, north, and east) by mountain ranges, with peaks in the eastern range above 9,000 feet. The SVAB is bounded by the North Coast Ranges on the west and Northern Sierra Nevada Mountains on the east. The SVAB is approximately 13,700 square miles and essentially a smooth valley floor with elevations ranging from 40 to 500 feet. The rolling valley is interrupted by the Sutter Buttes, an area of 80 square miles in northern Sutter County, which rise abruptly to more than 2,100 feet above the valley floor.

Topography and Meteorology

Hot dry summers and mild rainy winters characterize the Mediterranean climate of the SVAB. During the year the temperature may range from 20 to 115 degrees Fahrenheit with summer highs usually in the 90s and winter lows occasionally below freezing. Average annual rainfall is about 19 inches, and the rainy season generally occurs from November through March. The prevailing winds are moderate in strength and vary from moist clean breezes from the south to dry land flows from the north.

The mountains surrounding the SVAB create a barrier to airflow, which can trap air pollutants under certain meteorological conditions. The highest frequency of air stagnation occurs in the autumn and early winter when large high-pressure cells collect over the Sacramento Valley. The lack of surface wind during these periods and the reduced vertical flow caused by less surface heating reduces the influx of outside air and allows air pollutants to become concentrated in a stable volume of air. The surface concentrations of pollutants are highest when these conditions are combined with temperature inversions that trap pollutants near the ground.

The ozone season (May through October) in the Sacramento Valley is characterized by stagnant morning air or light winds, with the delta sea breeze arriving in the afternoon out of the southwest. Usually, the evening breeze transports the airborne pollutants to the north out of the Sacramento Valley. During about half of the days from July to September, however, a phenomenon called the "Schultz Eddy" prevents this from occurring. Instead of allowing for the prevailing wind patterns to move north carrying the pollutants out, the Schultz Eddy causes the wind pattern to circle back to the south. This phenomenon has the effect of exacerbating the pollution levels in the area and increases the likelihood of violating federal or state standards.

CRITERIA POLLUTANTS

All criteria pollutants can have human health and environmental effects at certain concentrations. The United States Environmental Protection Agency (U.S. EPA) uses six "criteria pollutants" as indicators of air quality, and has established for each of them a maximum concentration above which adverse effects on human health may occur. These threshold concentrations are called National Ambient Air Quality Standards (NAAQS). In addition, California establishes ambient air quality standards, called California Ambient Air Quality Standards (CAAQS). California law does not require that the CAAQS be met by a specified date as is the case with NAAQS.

The ambient air quality standards for the six criteria pollutants (as shown in Table 3.2-1) are set to public health and the environment within an adequate margin of safety (as provided under Section 109 of the Federal Clean Air Act). Epidemiological, controlled human exposure, and toxicology studies evaluate potential health and environmental effects of criteria pollutants, and form the scientific basis for new and revised ambient air quality standards. Principal characteristics and possible health and environmental effects from exposure to the six primary criteria pollutants generated by the project are discussed below.

Ozone (O_3) is a photochemical oxidant and the major component of smog. While O_3 in the upper atmosphere is beneficial to life by shielding the earth from harmful ultraviolet radiation from the sun, high concentrations of O_3 at ground level are a major health and environmental concern. O_3 is not emitted directly into the air but is formed through complex chemical reactions between precursor emissions of volatile organic compounds (VOC)[1] and oxides of nitrogen (NO_x) in the presence of sunlight. These reactions are stimulated by sunlight and temperature so that peak O_3 levels occur typically during the warmer times of the year. Both ROGs and NO_x are emitted by

[1] Note: The term ROG (Reactive Organic Gases) is used interchangeably with VOC throughout this document.

transportation and industrial sources. ROGs are emitted from sources as diverse as autos, chemical manufacturing, dry cleaners, paint shops and other sources using solvents. Relatedly, reactive organic compounds (ROG) are defined as the subset of ROGs that are reactive enough to contribute substantially to atmospheric photochemistry.

The reactivity of O_3 causes health problems because it damages lung tissue, reduces lung function and sensitizes the lungs to other irritants. Scientific evidence indicates that ambient levels of O_3 not only affect people with impaired respiratory systems, such as asthmatics, but healthy adults and children as well. Exposure to O_3 for several hours at relatively low concentrations has been found to significantly reduce lung function and induce respiratory inflammation in normal, healthy people during exercise. This decrease in lung function generally is accompanied by symptoms including chest pain, coughing, sneezing and pulmonary congestion.

Studies show associations between short-term ozone exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to ozone may increase the risk of respiratory-related deaths (U.S. Environmental Protection Agency 2019a). The concentration of ozone at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggest that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum ozone concentration reaches 80 parts per billion (U.S. Environmental Protection Agency 2019b). The average background level of ozone in California and Nevada is approximately 48.3 parts per billion, which represents approximately 77 percent of the total ozone in the western region of the U.S. (NASA, 2015).

In addition to human health effect, ozone has been tied to crop damage, typically in the form of stunted growth, leaf discoloration, cell damage, and premature death. O_3 can also act as a corrosive and oxidant, resulting in property damage such as the degradation of rubber products and other materials.

Carbon monoxide (CO) is a colorless, odorless and poisonous gas produced by incomplete burning of carbon in fuels. Carbon monoxide is harmful because it binds to hemoglobin in the blood, reducing the ability of blood to carry oxygen. This interferes with oxygen delivery to the body's organs. The most common effects of CO exposure are fatigue, headaches, confusion, and dizziness due to inadequate oxygen delivery to the brain. For people with cardiovascular disease, short-term CO exposure can further reduce their body's already compromised ability to respond to the increased oxygen demands of exercise, exertion, or stress. Inadequate oxygen delivery to the heart muscle leads to chest pain and decreased exercise tolerance. Unborn babies whose mothers experience high levels of CO exposure during pregnancy are at risk of adverse developmental effects. Exposure to CO at high concentrations can also cause fatigue, headaches, confusion, dizziness, and chest pain. There are no ecological or environmental effects to ambient CO (California Air Resources Board, 2019a).

Very high levels of CO are not likely to occur outdoors. However, when CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. These people already have a reduced ability for getting oxygenated blood to their hearts in situations where the heart needs more oxygen than usual. They are especially vulnerable to the effects of CO when exercising or under increased stress. In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain also known as angina (U.S. EPA, 2016). Such acute effects may occur under current ambient conditions for some sensitive individuals, while increases in ambient CO levels increase the risk of such incidences.

Nitrogen oxides (NO_x) is a brownish, highly reactive gas that is present in all urban atmospheres. The main effect of increased NO_2 is the increased likelihood of respiratory problems. Under ambient conditions, NO_2 can irritate the lungs, cause bronchitis and pneumonia, and lower resistance to respiratory infections. Nitrogen oxides are an important precursor both to ozone (O_3) and acid rain, and may affect both terrestrial and aquatic ecosystems. Longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma, as well as children and the elderly are generally at greater risk for the health effects of NO_2.

The major mechanism for the formation of NO_2 in the atmosphere is the oxidation of the primary air pollutant nitric oxide (NO_x). NO_x plays a major role, together with ROGs, in the atmospheric reactions that produce O_3. NO_x forms when fuel is burned at high temperatures. The two major emission sources are transportation and stationary fuel combustion sources such as electric utility and industrial boilers.

Sulfur dioxide (SO_2) is one of the multiple gaseous oxidized sulfur species and is formed during the combustion of fuels containing sulfur, primarily coal and oil. The largest anthropogenic source of SO_2 emissions in the U.S. is fossil fuel combustion at electric utilities and other industrial facilities. SO_2 is also emitted from certain manufacturing processes and mobile sources, including locomotives, large ships, and construction equipment.

SO_2 affects breathing and may aggravate existing respiratory and cardiovascular disease in high doses. Sensitive populations include asthmatics, individuals with bronchitis or emphysema, children and the elderly. SO_2 is also a primary contributor to acid deposition, or acid rain, which causes acidification of lakes and streams and can damage trees, crops, historic buildings and statues. In addition, sulfur compounds in the air contribute to visibility impairment in large parts of the country. This is especially noticeable in national parks. Ambient SO_2 results largely from stationary sources such as coal and oil combustion, steel mills, refineries, pulp and paper mills and from nonferrous smelters.

Short-term exposure to ambient SO_2 has been associated with various adverse health effects. Multiple human clinical studies, epidemiological studies, and toxicological studies support a causal relationship between short-term exposure to ambient SO_2 and respiratory morbidity. The observed health effects include decreased lung function, respiratory symptoms, and increased emergency department visits and hospitalizations for all respiratory causes. These studies further suggest that people with asthma are potentially susceptible or vulnerable to these health effects.

In addition, SO_2 reacts with other air pollutants to form sulfate particles, which are constituents of fine particulate matter ($PM_{2.5}$). Inhalation exposure to $PM_{2.5}$ has been associated with various cardiovascular and respiratory health effects (U.S. EPA, 2017). Increased ambient SO_2 levels would lead to increased risk of such effects.

SO_2 emissions that lead to high concentrations of SO_2 in the air generally also lead to the formation of other sulfur oxides (SOx). SOx can react with other compounds in the atmosphere to form small particles. These particles contribute to particulate matter (PM) pollution. Small particles may penetrate deeply into the lungs and in sufficient quantity can contribute to health problems.

Particulate matter (PM) includes dust, dirt, soot, smoke and liquid droplets directly emitted into the air by sources such as factories, power plants, cars, construction activity, fires and natural windblown dust. Particles formed in the atmosphere by condensation or the transformation of emitted gases such as SO_2 and ROGs are also considered particulate matter. PM is generally categorized based on the diameter of the particulate matter: PM_{10} is particulate matter 10 micrometers or less in diameter (known as respirable particulate matte*r*), and $PM_{2.5}$ is particulate matter 2.5 micrometers or less in diameter (known as fine particulate matter).

Based on studies of human populations exposed to high concentrations of particles (sometimes in the presence of SO_2) and laboratory studies of animals and humans, there are major effects of concern for human health. These include effects on breathing and respiratory symptoms, aggravation of existing respiratory and cardiovascular disease, alterations in the body's defense systems against foreign materials, damage to lung tissue, carcinogenesis and premature death. Small particulate pollution causes health impacts even at very low concentrations – indeed no threshold has been identified below which no damage to health is observed.

Respirable particulate matter (PM_{10}) consists of small particles, less than 10 microns in diameter, of dust, smoke, or droplets of liquid which penetrate the human respiratory system and cause irritation by themselves, or in combination with other gases. Particulate matter is caused primarily by dust from grading and excavation activities, from agricultural activities (as created by soil preparation activities, fertilizer and pesticide spraying, weed burning and animal husbandry), and from motor vehicles, particularly diesel-powered vehicles. PM_{10} causes a greater health risk than larger particles, since these fine particles can more easily penetrate the defenses of the human respiratory system.

$PM_{2.5}$ consists of fine particles, which are less than 2.5 microns in size. Similar to PM_{10}, these particles are primarily the result of combustion in motor vehicles, particularly diesel engines, as well as from industrial sources and residential/agricultural activities such as burning. It is also formed through the reaction of other pollutants. As with PM_{10}, these particulates can increase the chance of respiratory disease, and cause lung damage and cancer. In 1997, the U.S. EPA created new Federal air quality standards for $PM_{2.5}$.

The major subgroups of the population that appear to be most sensitive to the effects of particulate matter include individuals with chronic obstructive pulmonary or cardiovascular

disease or influenza, asthmatics, the elderly and children. Particulate matter also impacts soils and damages materials, and is a major cause of visibility impairment.

Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lunch function, and increased respiratory symptoms. Studies show that every 1 microgram per cubic meter reduction in $PM_{2.5}$ results in a one percent reduction in mortality rate for individuals over 30 years old (Bay Area Air Quality Management District, 2017). Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function and the development of chronic bronchitis – and even premature death. Additionally, depending on its composition, both PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (U.S. Environmental Protection Agency 2019c).

Lead (Pb) exposure can occur through multiple pathways, including inhalation of air and ingestion of Pb in food, water, soil or dust. Once taken into the body, lead distributes throughout the body in the blood and is accumulated in the bones. Depending on the level of exposure, lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems and the cardiovascular system. Lead exposure also affects the oxygen carrying capacity of the blood. Excessive lead exposure can cause seizures, mental retardation and/or behavioral disorders. Low doses of lead can lead to central nervous system damage. Recent studies have also shown that lead may be a factor in high blood pressure and subsequent heart disease.

Lead is persistent in the environment and can be added to soils and sediments through deposition from sources of lead air pollution. Other sources of lead to ecosystems include direct discharge of waste streams to water bodies and mining. Elevated lead in the environment can result in decreased growth and reproductive rates in plants and animals, and neurological effects in vertebrates.

Lead exposure is typically associated with industrial sources; major sources of lead in the air are ore and metals processing and piston-engine aircraft operating on leaded aviation fuel. Other sources are waste incinerators, utilities, and lead-acid battery manufacturers. The highest air concentrations of lead are usually found near lead smelters. As a result of the U.S. EPA's regulatory efforts, including the removal of lead from motor vehicle gasoline, levels of lead in the air decreased by 98 percent between 1980 and 2014 (U.S. EPA, 2019d). Based on this reduction of lead in the air over this period, and since most new developments to not generate an increase in lead exposure, the health impacts of ambient lead levels are not typically monitored by the California Air Resources Board.

AMBIENT AIR QUALITY STANDARDS

Both the U.S. Environmental Protection Agency (U.S. EPA) and the CARB have established ambient air quality standards for common pollutants. These ambient air quality standards represent safe levels of contaminants that avoid specific adverse health effects associated with each pollutant.

The federal and State ambient air quality standards are summarized in Table 3.2-1 for important pollutants. The federal and State ambient standards were developed independently, although both processes attempted to avoid health-related effects. As a result, the federal and State standards differ in some cases. In general, the California standards are more stringent. This is particularly true for ozone, $PM_{2.5}$, and PM_{10}. The U.S. EPA signed a final rule for the federal ozone eight-hour standard of 0.070 ppm on October 1, 2015, and was effective as of December 28, 2015 (equivalent to the California state ambient air quality eight-hour standard for ozone).

TABLE 3.2-1: FEDERAL AND STATE AMBIENT AIR QUALITY STANDARDS

POLLUTANT	*AVERAGING TIME*	*FEDERAL PRIMARY STANDARD*	*STATE STANDARD*
Ozone	1-Hour 8-Hour	-- 0.070 ppm	0.09 ppm 0.070 ppm
Carbon Monoxide	8-Hour 1-Hour	9.0 ppm 35.0 ppm	9.0 ppm 20.0 ppm
Nitrogen Dioxide	Annual 1-Hour	0.053 ppm 0.100 ppm	0.03 ppm 0.18 ppm
Sulfur Dioxide	Annual 24-Hour 1-Hour	0.03 ppm 0.14 ppm 0.075 ppm	-- 0.04 ppm 0.25 ppm
PM_{10}	Annual 24-Hour	-- 150 ug/m^3	20 ug/m^3 50 ug/m^3
$PM_{2.5}$	Annual 24-Hour	12 ug/m^3 35 ug/m^3	12 ug/m^3 --
Lead	30-Day Avg. 3-Month Avg.	-- 0.15 ug/m^3	1.5 ug/m^3 --

NOTES: PPM = PARTS PER MILLION, UG/M3 = MICROGRAMS PER CUBIC METER

SOURCE: CALIFORNIA AIR RESOURCES BOARD, 2019A.

In 1997, new national standards for fine particulate matter diameter 2.5 microns or less ($PM_{2.5}$) were adopted for 24-hour and annual averaging periods. The existing PM_{10} standards were retained, but the method and form for determining compliance with the standards were revised.

In addition to the criteria pollutants discussed above, Toxic Air Contaminants (TACs) are another group of pollutants of concern. TACs are injurious in small quantities and are regulated despite the absence of criteria documents. The identification, regulation and monitoring of TACs is relatively recent compared to that for criteria pollutants. Unlike criteria pollutants, TACs are regulated on the basis of risk rather than specification of safe levels of contamination.

Existing air quality concerns within Sacramento County and the entire air basin are related to increases of regional criteria air pollutants (e.g., ozone and particulate matter), exposure to toxic air contaminants, odors, and increases in greenhouse gas emissions contributing to climate change. The primary source of ozone (smog) pollution is motor vehicles which account for 70 percent of the ozone in the region. Particulate matter is caused by dust, primarily dust generated from construction and grading activities, and smoke which is emitted from fireplaces, wood-burning stoves, and agricultural burning.

Attainment Status

In accordance with the California Clean Air Act (CCAA), the CARB is required to designate areas of the state as attainment, nonattainment, or unclassified with respect to applicable standards. An "attainment" designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A "nonattainment" designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria.

Depending on the frequency and severity of pollutants exceeding applicable standards, the nonattainment designation can be further classified as serious nonattainment, severe nonattainment, or extreme nonattainment, with extreme nonattainment being the most severe of the classifications. An "unclassified" designation signifies that the data do not support either an attainment or nonattainment status. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for ozone, CO, and NO_2 as "does not meet the primary standards," "cannot be classified," or "better than national standards." For SO_2, areas are designated as "does not meet the primary standards," "does not meet the secondary standards," "cannot be classified," or "better than national standards." However, the CARB terminology of attainment, nonattainment, and unclassified is more frequently used.

Sacramento County has a state designation of Nonattainment for ozone and PM_{10}, and a state designation of either Unclassified or Attainment for all other criteria pollutants. Sacramento County has a national designation of Nonattainment for ozone and $PM_{2.5}$ and a national designation of either Attainment or Unclassified for all other criteria pollutants. Table 3.2-2 presents the state and national attainment status for Sacramento County.

TABLE 3.2-2: STATE AND NATIONAL ATTAINMENT STATUS (SACRAMENTO COUNTY)

CRITERIA POLLUTANTS	*STATE DESIGNATIONS*	*NATIONAL DESIGNATIONS*
Ozone	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Attainment	Nonattainment
Carbon Monoxide	Attainment	Unclassified/Attainment
Nitrogen Dioxide	Attainment	Unclassified/Attainment
Sulfur Dioxide	Attainment	Unclassified/Attainment
Sulfates	Attainment	N/A
Lead	Attainment	Unclassified/Attainment
Hydrogen Sulfide	Unclassified	N/A
Visibility Reducing Particles	Unclassified	N/A

NOTE: N/A = NO FEDERAL STANDARD

SOURCE: CALIFORNIA AIR RESOURCES BOARD, 2018.

Sacramento County Monitoring

The CARB maintains numerous air quality monitoring sites throughout Sacramento County to measure ozone and $PM_{2.5}$. The CARB also maintains numerous air quality monitoring sites

throughout the SVAB to monitor PM_{10}. It is important to note that the federal ozone 1-hour standard was revoked by the USEPA and is no longer applicable for federal standards. The latest data obtained from the monitoring sites in Sacramento County (available for year 2015 through 2019) is summarized in Tables 3.2-3 and 3.2-4, and data in the SVAB is summarized in Table 3.2-5.

TABLE 3.2-3: SACRAMENTO COUNTY AMBIENT AIR QUALITY MONITORING DATA SUMMARY - OZONE

YEAR	DAYS > STANDARD				1-HOUR OBSERVATIONS			8-HOUR AVERAGES				YEAR COVERAGE

ODORS

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another.

It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air.

When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

SENSITIVE RECEPTORS

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiorespiratory diseases. A sensitive receptor is a location where human populations, especially children, seniors, and sick persons, are present and where there is a reasonable expectation of continuous human exposure to pollutants. Examples of sensitive receptors include residences, hospitals and schools. The closest sensitive receptors to the Plan Area include existing residences located to the south and east of the Specific Plan Area.

3.2.2 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: NAAQS for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The U.S. EPA is responsible for administering the FCAA. The FCAA requires the U.S. EPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health (with an adequate margin of safety, including for sensitive populations such as children, the elderly, and individuals suffering from respiratory diseases), and secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

NAAQS standards define clean air and represent the maximum amount of pollution that can be present in outdoor air without any harmful effects on people and the environment. Existing violations of the ozone and $PM_{2.5}$ ambient air quality standards indicate that certain individuals exposed to these pollutants may experience certain health effects, including increased incidence of cardiovascular and respiratory ailments.

NAAQS standards have been designed to accurately reflect the latest scientific knowledge and are reviewed every five years by a Clean Air Scientific Advisory Committee (CASAC), consisting of seven members appointed by the U.S. EPA administrator. Reviewing NAAQS is a lengthy undertaking and includes the following major phases: Planning, Integrated Science Assessment (ISA), Risk/Exposure Assessment (REA), Policy Assessment (PA), and Rulemaking. The process starts with a comprehensive review of the relevant scientific literature. The literature is summarized and conclusions are presented in the ISA. Based on the ISA, U.S. EPA staff perform a risk and exposure assessment, which is summarized in the REA document. The third document, the PA, integrates the findings and conclusions of the ISA and REA into a policy context, and provides lines of reasoning that could be used to support retention or revision of the existing NAAQS, as well as several alternative standards that could be supported by the review findings. Each of these three documents is released for public comment and public peer review by the CASAC. Members of CASAC are appointed by the U.S. EPA Administrator for their expertise in one or more of the subject areas covered in the ISA. The committee's role is to peer review the NAAQS documents, ensure that they reflect the thinking of the scientific community, and advise the Administrator on the technical and scientific aspects of standard setting. Each document goes through two to three drafts before CASAC deems it to be final.

Although there is some variability among the health effects of the NAAQS pollutants, each has been linked to multiple adverse health effects including, among others, premature death, hospitalizations and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing. NAAQS standards were last revised for each of the six criteria pollutant as listed below, with detail on what aspects of NAAQS changed during the most recent update:

- Ozone: On October 1, 2015, the U.S. EPA lowered the national eight-hour standard from 0.075 ppm to 0.070 ppm, providing for a more stringent standards consistent with the current California state standard.
- CO: In 2011, the primary standards were retained from the original 1971 level, without revision. The secondary standards were revoked in 1985.
- NO_2: The national NO_2 standard was most recently revised in 2010 following an exhaustive review of new literature that pointed to evidence for adverse effects in asthmatics at lower NO_2 concentrations than the existing national standard.
- SO_2: On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99^{th} percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb.
- PM: the national annual average $PM_{2.5}$ standard was most recently revised in 2012 following an exhaustive review of new literature pointed to evidence for increased risk of premature mortality at lower $PM_{2.5}$ concentrations than the existing standard.
- Lead: The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. In 2016, the primary and secondary standards were retained.

The law recognizes the importance for each state to locally carry out the requirements of the FCAA, as special consideration of local industries, geography, housing patterns, etc. are needed to have full comprehension of the local pollution control problems. As a result, the U.S. EPA requires each state to develop a State Implementation Plan (SIP) that explains how each state will implement the FCAA within their jurisdiction. A SIP is a collection of rules and regulations that a particular state will implement to control air quality within their jurisdiction. The CARB is the state agency that is responsible for preparing the California SIP.

Transportation Conformity

Transportation conformity requirements were added to the FCAA in the 1990 amendments, and the U.S. EPA adopted implementing regulations in 1997. See §176 of the FCAA (42 U.S.C. §7506) and 40 CFR Part 93, Subpart A. Transportation conformity serves much the same purpose as general conformity: it ensures that transportation plans, transportation improvement programs, and projects that are developed, funded, or approved by the United States Department of Transportation or that are recipients of funds under the Federal Transit Act or from the Federal Highway Administration (FHWA), conform to the SIP as approved or promulgated by U.S. EPA.

Currently, transportation conformity applies in nonattainment areas and maintenance areas. Under transportation conformity, a determination of conformity with the applicable SIP must be

made by the agency responsible for the project, such as the Metropolitan Planning Organization, the Council of Governments, or a federal agency. The agency making the determination is also responsible for all the requirements relating to public participation. Generally, a project will be considered in conformance if it is in the transportation improvement plan and the transportation improvement plan is incorporated in the SIP. If an action is covered under transportation conformity, it does not need to be separately evaluated under general conformity.

Transportation Control Measures

One particular aspect of the SIP development process is the consideration of potential control measures as a part of making progress towards clean air goals. While most SIP control measures are aimed at reducing emissions from stationary sources, some are typically also created to address mobile or transportation sources. These are known as transportation control measures (TCMs). TCM strategies are designed to reduce vehicle miles traveled and trips, or vehicle idling and associated air pollution. These goals are achieved by developing attractive and convenient alternatives to single-occupant vehicle use. Examples of TCMs include ridesharing programs, transportation infrastructure improvements such as adding bicycle and carpool lanes, and expansion of public transit.

STATE

CARB Mobile-Source Regulation

The State of California is responsible for controlling emissions from the operation of motor vehicles in the State. Rather than mandating the use of specific technology or the reliance on a specific fuel, the CARB motor vehicle standards specify the allowable grams of pollution per mile driven. In other words, the regulations focus on the reductions needed rather than on the manner in which they are achieved. Towards this end, the CARB has adopted regulations which require auto manufacturers to phase in less polluting vehicles.

California Clean Air Act

The California Clean Air Act (CCAA) was first signed into law in 1988. The CCAA provides a comprehensive framework for air quality planning and regulation, and spells out, in statute, the state's air quality goals, planning and regulatory strategies, and performance. The CARB is the agency responsible for administering the CCAA. The CARB established ambient air quality standards pursuant to the California Health and Safety Code (CH&SC) [§39606(b)], which are similar to the federal standards.

California Air Quality Standards

Although NAAQS are determined by the U.S. EPA, states have the ability to set standards that are more stringent than the federal standards. As such, California established more stringent ambient air quality standards. Federal and state ambient air quality standards have been established for ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, suspended particulates and lead. In addition, California has created standards for pollutants that are not covered by federal standards. Although there is some variability among the health effects of the CAAQS pollutants, each has

been linked to multiple adverse health effects including, among others, premature death, hospitalizations and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing. The existing state and federal primary standards for major pollutants are shown in Table 3.2-1.

Air quality standard setting in California commences with a critical review of all relevant peer reviewed scientific literature. The Office of Environmental Health Hazard Assessment (OEHHA) uses the review of health literature to develop a recommendation for the standard. The recommendation can be for no change, or can recommend a new standard. The review, including the OEHHA recommendation, is summarized in a document called the draft Initial Statement of Reasons (ISOR), which is released for comment by the public, and also for public peer review by the Air Quality Advisory Committee (AQAC). AQAC members are appointed by the President of the University of California for their expertise in the range of subjects covered in the ISOR, including health, exposure, air quality monitoring, atmospheric chemistry and physics, and effects on plants, trees, materials, and ecosystems. The Committee provides written comments on the draft ISOR. The ARB staff next revises the ISOR based on comments from AQAC and the public. The revised ISOR is then released for a 45-day public comment period prior to consideration by the Board at a regularly scheduled Board hearing.

In June of 2002, the CARB adopted revisions to the PM_{10} standard and established a new $PM_{2.5}$ annual standard. The new standards became effective in June 2003. Subsequently, staff reviewed the published scientific literature on ground-level ozone and nitrogen dioxide and the CARB adopted revisions to the standards for these two pollutants. Revised standards for ozone and nitrogen dioxide went into effect on May 17, 2006 and March 20, 2008, respectively. These revisions reflect the most recent changes to the CAAQS.

Tanner Air Toxics Act

California regulates TACs primarily through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588). The Tanner Act sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB can designate a substance as a TAC. To date, CARB has identified more than 21 TACs and has adopted U.S. EPA's list of HAPs as TACs. Most recently, diesel PM was added to the CARB list of TACs. Once a TAC is identified, CARB then adopts an Airborne Toxics Control Measure (ATCM) for sources that emit that particular TAC. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure below that threshold. If there is no safe threshold, the measure must incorporate Best Available Control Technologies (BACT) to minimize emissions.

AB 2588 requires that existing facilities that emit toxic substances above a specified level prepare a toxic-emission inventory, prepare a risk assessment if emissions are significant, notify the public of significant risk levels, and prepare and implement risk reduction measures. CARB has adopted diesel exhaust control measures and more stringent emission standards for various on-road mobile sources of emissions, including transit buses and off-road diesel equipment (e.g., tractors, generators). In February 2000, CARB adopted a new public-transit bus-fleet rule and emission

standards for new urban buses. These rules and standards provide for (1) more stringent emission standards for some new urban bus engines, beginning with 2002 model year engines; (2) zero-emission bus demonstration and purchase requirements applicable to transit agencies; and (3) reporting requirements under which transit agencies must demonstrate compliance with the urban transit bus fleet rule.

Building Code Requirements Intended to Reduce GHG Emissions

CALIFORNIA ENERGY CODE

The California Energy Code (California Code of Regulations, Title 24, Part 6), which is incorporated into the Building Energy Efficiency Standards, was first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Although these standards were not originally intended to reduce GHG emissions, increased energy efficiency results in decreased GHG emissions because energy efficient buildings require less electricity and thus less consumption of fossil fuels, which emit GHGs and other air pollutants. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. The current 2019 Building Energy Efficiency Standards, commonly referred to as the "Title 24" standards, include changes from the previous standards that were adopted, to do the following:

- Provide California with an adequate, reasonably priced, and environmentally sound supply of energy.
- Respond to Assembly Bill 32, the Global Warming Solutions Act of 2006, which mandates that California must reduce its GHG emissions to 1990 levels by 2020.
- Pursue California energy policy that energy efficiency is the resource of first choice for meeting California's energy needs.
- Act on the California Energy Commission's Integrated Energy Policy Report, which finds that standards are the most cost-effective means to achieve energy efficiency, states an expectation that the Building Energy Efficiency Standards will continue to be upgraded over time to reduce electricity and peak demand, and recognizes the role of the Building Energy Efficiency Standards in reducing energy related to meeting California's water needs and in reducing GHG emissions.
- Meet the West Coast Governors' Global Warming Initiative commitment to include aggressive energy efficiency measures into updates of State building codes.
- Meet Executive Order S-20-04, the Green Building Initiative, to improve the energy efficiency of non-residential buildings through aggressive standards.

The most recent Title 24 standards are the 2019 Title 24 standards. The 2019 Building Energy Efficiency Standards improve upon the 2016 Energy Standards for new construction of, and additions and alterations to, residential and nonresidential buildings. Buildings permitted on or after January 1, 2020, must comply with the 2019 Standards. The California Energy Commission updates the standards every three years.

Single-family homes built with the 2019 standards will use about 7 percent less energy due to energy efficiency measures versus those built under the 2016 standards. Once rooftop solar electricity generation is factored in, homes built under the 2019 standards will use about 53 percent less energy than those under the 2016 standards. This will reduce greenhouse gas emissions by 700,000 metric tons over three years, equivalent to taking 115,000 fossil fuel cars off the road. Nonresidential buildings will use about 30 percent less energy due mainly to lighting upgrades.

CALIFORNIA GREEN BUILDING STANDARDS CODE

The purpose of the California Green Building Standards Code (California Code of Regulations Title 24, Part 11) is to improve public health and safety and to promote the general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices in the following categories: 1) planning and design; 2) energy efficiency; 3) water efficiency and conservation; 4) material conservation and resource efficiency; and 5) environmental quality. The California Green Building Standards, which became effective on January 1, 2011, instituted mandatory minimum environmental performance standards for all ground-up new construction of commercial, low-rise residential uses, and State-owned buildings, as well as schools and hospitals. The mandatory standards require the following:

- 20 percent mandatory reduction in indoor water use relative to baseline levels;
- 50 percent construction/demolition waste must be diverted from landfills;
- Mandatory inspections of energy systems to ensure optimal working efficiency; and
- Low-pollutant emitting exterior and interior finish materials such as paints, carpets, vinyl flooring, and particle boards.

The voluntary standards require the following:

- **Tier I:** 15 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 65 percent reduction in construction waste, 10 percent recycled content, 20 percent permeable paving, 20 percent cement reduction, and cool/solar reflective roof.
- **Tier II:** 30 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 75 percent reduction in construction waste, 15 percent recycled content, 30 percent permeable paving, 30 percent cement reduction, and cool/solar reflective roof.

LOCAL

Sacramento Metropolitan Air Quality Management District

At the county level, air quality is managed through land use and development planning practices that are implemented by Sacramento County and the incorporated Cities and through permitted

source controls that are implemented by the Sacramento Metropolitan Air Quality Management District (SMAQMD).

The SMAQMD is responsible for (1) implementing air quality regulations, including developing plans and control measures for stationary sources of air pollution to meet the NAAQS and CAAQS, (2) implementing permit programs for the construction, modification, and operation of sources of air pollution, and (3) enforcing air pollution statutes and regulations governing stationary sources. With CARB oversight, the SMAQMD administers local regulations.

The following SMAQMD rules that may relate to project construction activities or building design may include, but are not limited to:

- **Rule 201: General Permit Requirements**. Any project that includes the use of equipment capable of releasing emissions to the atmosphere may require permit(s) from SMAQMD prior to equipment operation. The applicant, developer, or operator of a project that includes an emergency generator, boiler, or heater should contact the SMAQMD early to determine if a permit is required, and to begin the permit application process. Other general types of uses that require a permit include, but are not limited to, dry cleaners, gasoline stations, spray booths, and operations that generate airborne particulate emissions. Portable construction equipment (e.g., generators, compressors, pile drivers, lighting equipment, etc.) with an internal combustion engine over 50 horsepower is required to have a SMAQMD permit or a CARB portable equipment registration (PERP).
- **Rule 402: Nuisance**. A person shall not discharge from any source whatsoever such quantities of air contaminants or other materials which cause injury, detriment, nuisance or annoyance to any considerable number of persons or the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause or have natural tendency to cause injury or damage to business or property.
- **Rule 403: Fugitive Dust**. The responsible person or entity is required to implement every reasonable method to control dust emissions from any construction, handling or storage activity, or any wrecking, excavation, grading, clearing of land or solid waste disposal operation to prevent fugitive dust generated through those activities from escaping the project site. Actions include but are not limited to application of water or chemicals, asphalt, and/or oil depending on the dust-generating activity.
- **Rule 442: Architectural Coatings**. The responsible person or entity may not use a coating with a VOC content in excess of the corresponding limits specified in this rule.
- **Rule 453**: **Cutback and Emulsified Asphalt Paving Materials**. Asphalt paving operations that may be associated with implementation of the project would be subject to Rule 453. This rule applies to the manufacture and use of cutback asphalt and emulsified asphalt for paving and maintenance operation.
- **Rule 460**: **Adhesives and Sealants.** The developer or contractor is required to use adhesives and sealants that comply with the volatile organic compound content limits specified in the rule.

Air Quality Attainment Plans

Each of the attainment plans currently in effect for the SVAB are discussed in further detail below.

2017 Revisions to the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan

The Sacramento region is classified as a severe-15 nonattainment area for the 2008 NAAQS (the USEPA states that the severe-15 classification refers to an area that has a design value for 8-hour ozone of up to 0.105 up to less than 0.111 ppm). The SMAQMD, along with the other air districts in the region, prepared the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan in December 2008. The CARB determined that the Plan met CAA requirements and approved the plan on March 26, 2009 as a revision to the SIP. An update to the plan, 2017 Revisions to the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan (*2017 Ozone Attainment Plan*), has been prepared and was approved and adopted by the CARB on November 16, 2017. A further update to the plan, *2018 Updates to the California State Implementation Plan*, was adopted by the CARB on October 25, 2018.

PM2.5 Implementation/Maintenance Plan and Re-designation Request for Sacramento PM2.5 Nonattainment Area

The USEPA promulgated a new 24-hour standard for $PM_{2.5}$ in October 2006, which strengthened the daily standard from 65 $\mu g/m^3$ to 35 $\mu g/m^3$ to protect the general public from health effects caused by exposure to fine particulate matter. Although the Sacramento area had attained the prior $PM_{2.5}$ standards, the area did not meet the new standards and the USEPA Administrator established $PM_{2.5}$ nonattainment designations for the 2006 standard, which became effective on December 14, 2009. In the USEPA's final designation, a multi-county $PM_{2.5}$ nonattainment area was created in the Sacramento region.

However, the Sacramento federal $PM_{2.5}$ nonattainment area attained the federal $PM_{2.5}$ health standards on December 31, 2011. To be re-designated, the area must, among other things, show that attainment was achieved by permanent and enforceable reductions and that the area would remain below the standard for 10 years after accounting for emissions growth. The $PM_{2.5}$ Implementation/Maintenance Plan and Re-designation Request for Sacramento $PM_{2.5}$ Nonattainment Area (*$PM_{2.5}$ Implementation/Maintenance Plan*) was prepared to show that the region has met the requirements and requests that the USEPA re-designate the area to attainment. The U.S EPA issued a final rule for Determination of Attainment for the Sacramento Nonattainment Area effective August 14, 2013. The *$PM_{2.5}$ Implementation/Maintenance Plan* would be adopted by the air districts within the nonattainment area, as well as the CARB, as a revision to the SIP. Contents of the *$PM_{2.5}$ Implementation/Maintenance Plan* include demonstration that the NAAQS was met and that all requirements have been met for a re-designation to attainment, specification of actions to be taken if the standards are violated in the future, and establishment of regional motor vehicle emission budgets.

The CCAA also requires that air districts assess their progress toward attaining the CAAQS once every three years. The triennial assessment is to report the extent of air quality improvement and

the amounts of emission reductions achieved from control measures for the preceding three-year period. The SMAQMD reviews and revises the Air Quality Attainment Plan (AQAP), if necessary, to correct for deficiencies in meeting progress, to incorporate new data or projections, to mitigate ozone transport, and to pursue the expeditious adoption of all feasible control measures. The most recent triennial assessment is the 2009 Triennial Report and Plan Revision. SMAQMD rules included in the Triennial Reports and AQAP Revisions are intended to limit emissions from stationary sources. Programs are also proposed to provide incentives for mobile heavy-duty vehicles/engines, CEQA mitigation for construction and land use development, and a Spare the Air program to reduce vehicle trips. Additional rules include, but may not be limited to, rules that would reduce emissions from degreasing and solvent cleaning operations, adhesives and sealants, solvents and unspecified coatings.

PM_{10} Implementation/Maintenance Plan and Redesignation Request for Sacramento County

The Sacramento region was classified as attainment for the 1997 PM_{10} 24-hour NAAQS of 150 $\mu g/m^3$. In October 2010, the SMAQMD prepared the PM_{10} *Implementation/Maintenance Plan and Redesignation Request for Sacramento County* (2010). The USEPA approved the PM_{10} Plan, which allowed the USEPA to proceed with the redesignation of Sacramento County as attainment for the PM_{10} NAAQS. The first Maintenance Plan showed maintenance from 2012 through 2022.

A second plan must provide for maintenance of the NAAQS for 10 more years after expiration of the first 10-year maintenance period. The SMAQMD will prepare and submit a second maintenance plan in 2020 to demonstrate maintenance of the PM_{10} standard through 2032.

Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS)

SACOG is designated by the state and federal governments as the MPO for the region and is responsible for developing a regional transportation plan in coordination with Sacramento, Yolo, Yuba, Sutter, El Dorado and Placer counties and the 22 cities within those counties (excluding the Tahoe Basin). The SACOG MTP/SCS is required to cover at least a 20-year planning horizon, and be updated at least every four years.

The MTP/SCS links land use, air quality, and transportation needs within the region. If a city, county, or public agency in the Sacramento region wants to use federal transportation funding for transportation projects or programs, those projects must be included in the MTP/SCS project list. The MTP/SCS includes transportation improvements and investments that will serve the Sacramento region's projected land use pattern and population growth. All transportation projects that are regionally significant for potential air quality impacts must also be included in the MTP/SCS.

Citrus Heights General Plan

The Citrus Heights General Plan contains the following goals and policies that are relevant to air quality:

COMMUNITY HEALTH ELEMENT

Goal 13: Increase activity in the Sunrise MarketPlace through transportation investments that enhance the convenience and safety of driving, riding transit, bicycling, and walking to, from, and within the district.

Policy 13.1: Improve mobility in the Sunrise MarketPlace area to provide adequate access for vehicles, transit, bicycles and pedestrians.

Policy 13.2: Create convenient connections across Sunrise Boulevard for vehicles, bicycles, pedestrians and transit.

Policy 13.3: Promote installation of additional, distinctive transit stops at key activity areas and encourage covered shelters at existing and new stops.

Policy 13.4: Facilitate the development of new buildings in areas currently devoted to parking to shorten distances between buildings and foster better pedestrian connections between shopping centers.

Policy 13:5: Promote transit-oriented development through reuse and redevelopment of opportunity sites near the Greenback Lane/Sunrise Boulevard intersection, including potential mixed-use projects with a residential component. Coordinate potential development plans with transit near this intersection.

Goal 31: Provide access to public transit service to all Citrus Heights residents and high quality, frequent public transit service to those residents living along designated transit routes

Policy 31.1: Strive to increase fixed-route and demand responsive (i.e., paratransit) transit service coverage and frequency to Citrus Heights residents and employees.

Policy 31.2: Strive to provide public transit that is an attractive, convenient, dependable and safe alternative to the automobile.

Policy 31.3: Consider express commuter bus service between Citrus Heights and major employment and transit centers.

Policy 31.4: Require new development to provide transit enhancements, (including, but not limited to bus pull-outs and bus shelters) where appropriate, that decrease transit travel times, improve access to transit stops, or improve the amenities, security, or travel information at transit stops.

Goal 40: Promote energy conservation through appropriate design and construction techniques.

Policy 40.1: Encourage new buildings to maximize solar access to promote passive solar energy use, natural ventilation, effective use of daylight, and on-site solar generation.

Policy 40.2: Promote a climate-appropriate tree planting and maintenance program in order to reduce ambient air temperature on hot sunny days, and require that all tree plantings and outdoor lighting be integrated.

Goal 41: Minimize building energy consumption and transition to clean, renewable energy sources.

Policy 41.1: Require energy-efficient site and building designs in new construction.

Policy 41.2: Provide financial incentives to maximize energy conservation and the use of clean and renewable energy.

Policy 41.3: Retrofit existing buildings using low maintenance, durable building materials and high-efficiency energy systems and appliances.

Policy 41.4: Reduce energy consumption supporting municipal operations.

Goal 53: Protect and improve air quality in the Citrus Heights area to the maximum extent possible.

Policy 53.1: Promote measures that improve air quality and help meet air quality attainment standards.

Policy 53.2: Minimize the impacts of vehicle emissions on air quality.

Policy 53.3: Promote use of clean alternative fuel vehicles and construction equipment.

Policy 53.4: Enable use of electric (rather than gasoline-powered) equipment and natural gas appliances, including outdoor grills.

Policy 53.5: Discourage the development of potential stationary sources of toxic air contaminants near sensitive receptors, and the siting of sensitive receptors near sources of toxic air contaminants.

Goal 54: Integrate air quality planning with land use and transportation planning.

Policy 54.1: Encourage alternative modes of transportation and trip-reducing strategies such as telecommuting and mixed-use development.

Policy 54.2: Participate in educational efforts aimed at improving air quality, such as notifying residents and businesses during "Spare the Air" days designated by the Sacramento Air Quality Management District.

Goal 55: Reduce community-wide GHG emissions 10 to 15% below 2005 levels by 2020.

Policy 55.1: Implement a comprehensive greenhouse gas reduction plan to reduce communitywide greenhouse gasses through community engagement and leadership; land

use, community design, and transportation choices; energy and water conservation techniques; solid waste reduction and building green infrastructure.

Policy 55.2: Emphasize Citrus Heights' role as an environmental steward by conducting City business in a manner that increases community understanding of the healthy and balanced relationships between developed and natural environments.

Policy 55.3: Consult and coordinate with State resource and emergency management agencies regarding updates to climate change science and development of adaptation priorities.

Goal 60: Build greener infrastructure and promote development of a healthy community.

Policy 60.1: Mitigate the urban heat island effect and sequester carbon.

3.2.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE FOR CRITERIA POLLUTANTS

Consistent with Appendix G of the CEQA Guidelines and the SMAQMD thresholds of significance, the Specific Plan will have a significant impact on the environment associated with air quality if it will:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations; and/or
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Impacts related to greenhouse gases, climate change, and energy are addressed in Section 3.5.

The SMAQMD provides project-level thresholds of significance for: particulate matter less than 10 micrometers in diameter (PM_{10}) and less than 2.5 micrometers in diameter ($PM_{2.5}$), and the precursors to ozone, which are reactive organic gases (ROG) and nitrogen oxides (NOx). The SMAQMD developed these project-level thresholds based on the emissions amount that would exceed a CAAQS or contribute substantially to an existing or projected violation of a CAAQS. A substantial contribution is considered an emission that is equal to or greater than 5% of a CAAQS. The SMAQMD automatically adopts revisions to the CAAQS as revisions to the thresholds occur. The current thresholds are provided in Table 3.2-6, below.

TABLE 3.2-6: THRESHOLDS OF SIGNIFICANCE FOR CRITERIA POLLUTANTS OF CONCERN

POLLUTANT	*THRESHOLDS OF SIGNIFICANCE*	
	CONSTRUCTION	*OPERATIONAL*
ROG	None	65 pounds/day
NOx	85 pounds/day	65 pounds/day
PM_{10}	If all feasible Best Available Control Technology/Best Management Practices (BACT/BMP) are applied, then 80 pounds/day and 14.6 tons/year	If all feasible BACT/BMPs are applied, then 80 pounds/day and 14.6 tons/year
PM2.5	If all feasible BACT/BMPs are applied, then 82 pounds/day and 15 tons/year	If all feasible BACT/BMPs are applied, then 82 pounds/day and 15 tons/year

SOURCE: SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT, 2015.

Impacts Related to Project-Generated Pollutants of Human Health Concern

In December 2018, the California Supreme Court issued its decision in *Sierra Club v. County of Fresno* (226 Cal.App.4th 704) (hereafter referred to as the Friant Ranch Decision). The case reviewed the long-term, regional air quality analysis contained in the EIR for the proposed Friant Ranch development. The Friant Ranch project is a 942-acre master-plan development in unincorporated Fresno County within the San Joaquin Valley Air Basin, an air basin currently in nonattainment for the ozone and $PM_{2.5}$ NAAQS and CAAQS. The Court found that the air quality analysis was inadequate because it failed to provide enough detail "for the public to translate the bare [criteria pollutant emissions] numbers provided into adverse health impacts or to understand why such a translation is not possible at this time." The Court's decision clarifies that environmental documents must connect a project's air quality impacts to specific health effects or explain why it is not technically feasible to perform such an analysis.

All criteria pollutants that would be generated by the project are associated with some form of health risk (e.g., asthma). Criteria pollutants can be classified as either regional or localized pollutants. Regional pollutants can be transported over long distances and affect ambient air quality far from the emissions source. Localized pollutants affect ambient air quality near the emissions source. Ozone is considered a regional criteria pollutant, whereas CO, NO_2, SO_2, and lead (Pb) are localized pollutants. PM can be both a local and a regional pollutant, depending on its composition. As discussed above, the primary criteria pollutants of concern generated by the project are ozone precursors (ROG and NO_x) and PM (including diesel PM).

In October 2020, the SMAQMD published its *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District*. In it, the SMAQMD describes that it has developed a "Strategic Area Health Effects Screening Tool" that provides an estimate of the health effects for a CEQA project within the SMAQMD and the 5-Air-District Region with 656 pounds per day or less of NOx, ROG and $PM_{2.5}$ emissions. If the proposed CEQA project is within close proximity of one of the six strategic area source locations, a project proponent can discuss using the health effects from the Tool at that strategic area location with concurrence from the SMAQMD. However, if the project is located within the SMAQMD, but is not in close proximity to one of the six strategic area source locations, then the project proponent may use the health effects results from the South

Sacramento strategic area location as that will provide a conservative (i.e., upper bound) estimate of the potential health effects of the project, since the South Sacramento strategic area is located in the highest population area in the 5-Air-District Region.

The Specific Plan would generate less than 656 pounds per day of NOx, ROG and $PM_{2.5}$ emissions. Therefore, the "Strategic Area Health Effects Screening Tool" was utilized in this analysis using this location as a proxy to estimate the local health effects of Specific Plan implementation. Since the Plan Area is not in close proximity to any of the six strategic area source locations, the health effect results from the South Sacramento strategic area location was used, per SMAQMD guidance, to provide a conservative (i.e., upper bound) estimate of the potential health effects of the Specific Plan.

REGIONAL PROJECT-GENERATED CRITERIA POLLUTANTS (OZONE PRECURSORS AND REGIONAL PM)

Adverse health effects induced by regional criteria pollutant emissions generated by Specific Plan buildout (ozone precursors and PM) are highly dependent on a multitude of interconnected variables (e.g., cumulative concentrations, local meteorology and atmospheric conditions, the number and character of exposed individuals [e.g., age, gender]). For these reasons, ozone precursors (ROG and NO_x) contribute to the formation of ground-borne ozone on a regional scale, where emissions of ROG and NO_x generated in one area may not equate to a specific ozone concentration in that same area. Similarly, some types of particulate pollutants may be transported over long-distances or formed through atmospheric reactions. As such, the magnitude and locations of specific health effects from exposure to increased ozone or regional PM concentrations are the product of emissions generated by numerous sources throughout a region, as opposed to a single individual project.

LOCALIZED CARBON MONOXIDE CONCENTRATIONS

Heavy traffic congestion can contribute to high levels of CO, and individuals exposed to such hot spots may have a greater likelihood of developing adverse health effects. The SMAQMD has adopted screening criteria that provide a conservative indication of whether project-generated traffic would cause a potential CO hotspot. If the screening criteria are not met, a quantitative analysis through site-specific dispersion modeling of project-related CO concentrations would not be necessary, and the project would not cause localized violations of the CAAQS for CO. Projects that do not generate CO concentrations in excess of the health-based CAAQS would not contribute a significant level of CO such that localized air quality and human health would be substantially degraded.

ANALYSIS METHODOLOGY

Potential air quality impacts associated with short-term construction and long-term operations were evaluated in accordance with SMAQMD-recommended and the CARB-approved methodologies. Construction and operational emissions of criteria air pollutants were compared with the applicable thresholds of significance (described below) to determine potential impacts. SMAQMD's significance thresholds are used to determine whether the project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in

non-attainment, and also serve a proxy to determine the potential for the project to conflict with or obstruct implementation of any applicable air quality plan.

Construction-related emissions were modeled using the California Emissions Estimator Model California Emission Estimator Model (CalEEMod)™ (v.2016.3.2) (California Air Pollution Control Officers, 2018). Project-specific construction parameters were used as inputs in the air quality analysis (to the extent information was available). Construction is assumed to begin in early 2021 and end in December 2040, and would be developed over five phases.[2] Where project-specific information was not available, default parameters provided by each model were used. It should be noted that default assumptions in the models are typically conservative to avoid underestimating emissions when project-specific information is not available. Modeled construction-related emissions are compared with the applicable SMAQMD thresholds to determine significance.

Following construction, operation of the Specific Plan would generate air pollutant emissions. CalEEMod was also used to estimate these long-term operational emissions, as well as emissions associated with area and energy sources (i.e., natural gas combustion, landscape maintenance, periodic architectural coating, and consumer products). Operational emissions associated with day-to-day activities of the Specific Plan were quantified using CalEEMod and trip generation rates were based upon the traffic study prepared for the Specific Plan (Fehr & Peers, 2020). Mobile sources involve vehicle trips, including construction trucks and passenger cars. The analysis of mobile-source emissions compares the gross mobile-source emissions with the SMAQMD thresholds of significance for Specific Plan operations. CO impacts were evaluated using the screening-level procedures provided by SMAQMD (2018).

The impact analysis does not directly evaluate airborne lead. Neither construction nor future operations would generate quantifiable lead emissions because of regulations that require unleaded fuel and that prohibit lead in new building materials.

TAC emissions associated with project construction that could affect surrounding areas are evaluated qualitatively. The potential for the project operations to expose residents to TAC emissions that would exceed applicable health standards is also discussed qualitatively.

The "Strategic Area Health Effects Screening Tool" was utilized in this analysis using the SMAQMD's South Sacramento Location as a conservative proxy to estimate the local health effects of the project.

Lastly, SMAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis must determine if the project would result in excessive nuisance odors, as defined under California Code of Regulations, Health and Safety Code Section 41700, Air Quality Public Nuisance.

[2] It should be noted that the usage of an earlier date for the start of construction than is realistic, provides a more conservative estimate of construction emissions, since construction emission rates go down as the efficiency of the construction fleet improves over time.

CALEEMOD ASSUMPTIONS & METHODOLOGY

Operational Emissions

Full buildout of the Plan Area is expected to occur by 2040, although operational emissions are expected to commence after implementation of the first phase of the project (see construction schedule details under *Construction Emissions*, below, for further detail). The Specific Plan's scope and size do not qualify the project to be analyzed using the SMAQMD's "Operational Criteria Air Pollutant Screening Levels".

The land use inputs for CalEEMod modeling were derived from provided the Projected Development Scenario, which includes information provided by the project applicant. It should be noted that only a limited number of land uses are available in CalEEMod. Therefore, the land uses selected within CalEEMod for the purposes of modeling reflect the land use that is closest to the actual land use provided in the Projected Development Scenario. The CalEEMod land use inputs selected for the purposes of modeling include:

- Retail:
    - Regional Shopping Center (127,000 square feet)
- Residential:
    - Apartments Mid Rise (1,075 Dwelling Units)
    - Retirement Community (125 dwelling units)
- Recreational:
    - Fast Food Restaurant with Drive Thru (10,000 square feet)[3]
    - High Turnover (Sit Down Restaurant) (40,000 square feet)
    - Hotel (455 Rooms)
    - Movie Theater (No Matinee) (8 Screen)
    - Quality Restaurant (59,000 square feet)
- Commercial:
    - General Office Building (876,000 square feet)
    - Government (Civic Center) (33,000 square feet)
- Educational:
    - Day-Care Center (12,000 square feet)

Separately, minor adjustments were made to several of the default emission factors provided by CalEEMod. These are as follows:

- Consumer products:
    - The "general category" emission factor was adjusted from default value (reduced by a total of 12.89%), based on the following differences between project

[3] Note: Drive-through uses were analyzed as a worst-case scenario for air quality impacts; however, it should be noted that drive-throughs are prohibited by the Specific Plan.

attributes and the inputs used to develop the default value (the default value utilizes statewide factors from year 2008):

- The CARB estimated total statewide year 2016 ROG emissions of 208.71 tons/year, which is 12.89% less than the amount estimated for year 2008 (239.6 tons/year).

- Architectural Coatings:
  - The residential interior and non-residential interior emission factors were reduced from 100 g/L to 50 g/L, based on the SMAQMD Rule 442 that provides a maximum VOC limit of 50 g/L for flat coatings. It was assumed that flat coatings are used for interior coatings.

There are three types of emission sources modeled for the Specific Plan: area, energy, and mobile sources. These collectively make up the Specific Plan's operational emissions. The California Emission Estimator Model (CalEEMod)^{TM} (v.2016.3.2) was used to estimate area source emissions. The methodology used in this analysis to address each source is presented below.

AREA SOURCES

The term "area source emissions" refers to equipment or devices operating within a project that individually emit small quantities of air pollutants, but when considered collectively, represent large quantities of emissions. Examples include fireplaces, wood burning heaters, lawn maintenance equipment, application of paints and lacquers, and use of consumer products.

MOBILE SOURCES

The term "mobile source emissions" refers to vehicle emissions generated by a project. Mobile source emissions are dependent on a large number of variables including trip length, average speed, trip generation rates, vehicle fleet mix, starting conditions, temperature, year, and other factors.

CalEEMod was used to estimate mobile source emissions. The traffic inputs were derived from the traffic analysis. The traffic inputs include trip generation rates as included within the transportation impact analysis for the Specific Plan.

ENERGY SOURCES

Energy generated by Specific Plan buildout is accounted for within this category. Examples include building electricity and natural gas consumption.

Construction Emissions

Construction activities can generate a substantial amount of air pollution. In some cases, the emissions from construction represent the largest air quality impact associated with a project. While construction-related emissions are considered temporary, these short-term impacts can

contribute to the pollution load recorded at monitoring stations. Emissions from construction are assessed in this document to determine whether the thresholds of significance established by the SMAQMD would be exceeded.

The Specific Plan Area is currently graded. Construction activities would include: demolition, site preparation, paving, building construction, and architectural coatings. The emissions generated from these common construction activities include fugitive dust from soil disturbance, fuel combustion from mobile heavy-duty diesel and gasoline-powered equipment, portable auxiliary equipment, and worker commute trips.

CalEEMod was used to estimate the construction emissions from construction activities. Based on construction phasing and schedule, the default off-road construction equipment, amount, and characteristics provided by CalEEMod were used to model project off-road construction equipment. The Specific Plan was modeled to be developed over four approximately equal phases.[4]

IMPACTS AND MITIGATION MEASURES

Impact 3.2-1: Specific Plan implementation would conflict with or obstruct implementation of the applicable air quality plan or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard (Significant and Unavoidable)

The Specific Plan is consistent with all applicable planning documents, including each of the attainment plans currently in effect for the SVAB, including the State SIP. The Specific Plan is also consistent with all other relevant planning documents relating to air quality. Therefore, the Specific Plan's consistency with the SMAQMD's emissions thresholds is used as a proxy to determine the potential for the project to conflict with or obstruct implementation of any applicable air quality plan.

PROJECT CONSTRUCTION

Construction activities associated with construction and implementation of the Specific Plan would result in temporary short-term emissions associated with vehicle trips from construction workers, operation of construction equipment, and the dust generated during construction activities. These temporary and short-term emissions would generate additional ozone precursors (ROG and NO_x) as well as PM_{10} and $PM_{2.5}$. Below is an estimated phasing construction schedule for the Specific Plan, broken down into four equal phases:

- Phase 1:
    - Demolition: 1/1/2021 – 1/28/2021
    - Site Preparation: 1/29/2021 – 2/11/2021
    - Paving: 2/12/2021 – 3/11/2021

[4] Note: Actual development will occur based on market demand.

  - Building Construction: 3/12/2021 – 5/5/2025
  - Architectural Coating: 9/12/2021 – 12/31/2025
- Phase 2:
  - Demolition: 1/1/2026 – 1/28/2026
  - Site Preparation: 1/29/2026 – 2/11/2026
  - Paving: 2/12/2026 – 3/11/2026
  - Building Construction: 3/12/2026 – 5/5/2030
  - Architectural Coating: 9/12/2026 – 12/31/2030
- Phase 3:
  - Demolition: 1/1/2031 – 1/28/2031
  - Site Preparation: 1/29/2031 – 2/11/2031
  - Paving: 2/12/2031 – 3/11/2031
  - Building Construction: 3/12/2031 – 5/3/2035
  - Architectural Coating: 9/12/2031 – 12/31/2035
- Phase 4:
  - Demolition: 1/1/2036 – 1/28/2036
  - Site Preparation: 1/29/2036 – 2/11/2036
  - Paving: 2/12/2036 – 3/10/2036
  - Building Construction: 3/11/2036 – 5/4/2040
  - Architectural Coating: 9/12/2036 – 12/31/2040

SMAQMD advises that projects incorporate best management practices, regardless of whether emissions would be above the applicable thresholds. Below is a list of the best management practices that are recommended by the SMAQMD.

- Water all active construction sites at least three times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads.
- Cover or maintain at least two feet of free board space on haul trucks transportation soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered.
- Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited.
- Limit vehicle speeds on unpaved roads to 15 miles per hour (mph).
- All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.
- Minimize idling time either by shutting off equipment when not in use or reducing the time of idling to 5 minutes. Provide clear signage that posts this requirement for workers at the entrance to the site.
- Provide current certificate(s) of compliance for CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation [California Code of Regulations, Title 13, sections 2449 and 2449.1]

- Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.

CalEEMod allows the inclusion of measures that would reduce project-related construction emissions consistent with the SMAQMD construction-related best management practices (as provided above). To reflect the SMAQMD best management practices within the modeling, the following CalEEMod measures were used within CalEEMod to calculate the reduction in construction emissions due to implementation of these best management practices, per SMAQMD guidance:

- Water Exposed Area two times daily (55% Fugitive Dust PM reduction);
- Clean Paved Road (9% Fugitive Dust PM reduction).
- Unpaved Road Mitigation: Limit on-site construction vehicle speeds to 15 mph.

Table 3.2-7 shows the maximum daily and annual construction emissions that would result from the Specific Plan. The emissions provided in Table 3.2-7 represent emissions inclusive of the above-specified measures that would reduce Specific Plan-related construction emissions consistent with the SMAQMD construction-related best management practices. See Appendix B for further detail.

The SMAQMD has established construction emissions thresholds of significance of 85 pounds per day for NOx, 80 pounds per day and 14.6 tons per year for PM_{10}, and 82 pounds per day and 15 tons per year for $PM_{2.5}$. The SMAQMD utilizes a screening process and separate model for CO impacts. There is no construction threshold for ROG. As shown in Table 3.2-7, construction emissions of NOx would be at its maximum in year 2021, with a maximum of approximately 48.4 pounds per day, which is below the 85 pounds per day threshold for NOx. Year 2026 would be the peak year for PM_{10} and years 2026 through 2029 would be the peak years $PM_{2.5}$. However, emissions for PM would also be below the applicable daily and annual thresholds for PM as provided by the SMAQMD. As such, Specific Plan construction emissions would not be expected to contribute a significant level of air pollution such that regional air quality within the SVAB would be degraded. In addition, the Specific Plan would be required to implement Mitigation Measure 3.2-1 and Mitigation Measure 3.2-2, which were included within the *City of Citrus Heights General Plan EIR*, which further reduce construction-related Specific Plan emissions (by requiring implementation of SMAQMD's Basic Construction Emission Control Practices, and ensuring compliance with SMAQMD PM Screening Criteria and Implementation of SMAQMD *Enhanced Fugitive PM Dust Control Practices*). Therefore, Specific Plan construction emissions would result in a ***less than significant*** impact from construction-related criteria pollutant.

TABLE 3.2-7: SUMMARY OF MITIGATED MAXIMUM CONSTRUCTION DAILY AND ANNUAL EMISSIONS

YEAR	ROG (LBS/DAY)	NOX (LBS/DAY)	PM_{10} (LBS/DAY)	$PM_{2.5}$ (LBS/DAY)	PM_{10} (TONS/YEAR)	$PM_{2.5}$ (TONS/YEAR)

SOURCE: CALEEMOD (V.2016.3.2)

PROJECT OPERATIONS

The Specific Plan would be a direct and indirect source of air pollution, in that it would generate and attract vehicle trips in the region (mobile source emissions), require the use of grid energy (natural gas and electricity), and generate area source emissions. The mobile source emissions would be entirely from vehicles, while the area source emissions would be primarily from consumer products, and architectural coatings.

The SMAQMD has established operational emissions thresholds of significance of 65 pounds/day for the ozone precursors ROG and NOx, and 80 pounds/day for PM_{10} and 82 pounds/day for $PM_{2.5}$ (if all feasible BACT/BMPs are applied for PM emissions[5]). If the proposed project would exceed the SMAQMD thresholds for ROG, NOx, and PM_{10} at Specific Plan buildout, project operational emissions would be expected to contribute a significant level of air pollution such that regional air quality within the SVAB would be degraded.

CalEEMod was used to estimate operational emissions for the Specific Plan. The Plan Area would be developed over four phases. Detail regarding operational emissions during each phase of the Specific Plan can be found in Appendix B. Operational emissions include emissions of criteria pollutants that would result from mobile, energy, and area sources.

Implementation of the Specific Plan would include operational standards that would reduce project operational emissions. Additionally, the Specific Plan was assumed to adhere to existing and planned statewide requirements (such as statewide CALGreen Title 24 Energy Efficiency requirements and the Governor's Executive Order N-79-20 regarding electric vehicles) and local requirements (i.e., SMUD's net zero emissions target by 2040) that would further reduce project operational emissions. Moreover, the Specific Plan would be required to implement all feasible SMAQMD BMPs for particulate matter emissions from land use development projects. Lastly, the Specific Plan would include project-specific mitigation that would further reduce project emissions.

The following operational project characteristics would reduce project operational emissions.[6] A summary of the Specific Plan characteristics that were available to be accounted for within the CalEEMod model (as parameters within the model) are provided in the bullet list below (note: the associated CalEEMod measure is provided in brackets below).

- Density of 59.1 dwelling units per acre [Traffic Mitigation LUT-1];
- Diversity through single family residential, multi-family residential, commercial, parks and recreation, and senior uses [Traffic Mitigation, LUT-3];
- Improve destination accessibility (Distance to downtown job center is 13.25 miles) [Traffic Mitigation LUT-4];

[5] Note: Best Available Control Technologies (BACT) only apply to stationary source emissions. Since the Specific Plan does not include any stationary sources, they are not applicable to the Plan (SMAQMD, 2016).
[6] This list of project characteristics is derived from the 'Projected Development Scenario', as provided by the project applicant.

- 113 intersections per square mile (17 intersections over an area of 0.15 square miles) [Traffic Mitigation LUT-9];
- Transit accessibility (a Transit Center capable of adapting to Bus Rapid Transit is located on Sunrise Boulevard adjacent to the Plan Area; additional bus stops are located just to the northwest of the Plan Area) – average distance to transit for project residents would be approximately 0.2 miles) [Traffic Mitigation, LUT-5];
- Improve pedestrian network (project site and connecting off-site) [Traffic Mitigation, SDT-1];
- No hearths (i.e., fireplaces) [Area Mitigation];
- Use low-VOC paint for interiors (50 EF g/L);

It should also be noted that the project plans for the extensive use of shade trees through the Specific Plan Area, which would reduce the urban heat island effect that would be generated by the Specific Plan. However, this Specific Plan characteristic is not available to be modeled within CalEEMod.

The following statewide and local requirements would reduce further project operational emissions. A summary of the statewide measures (i.e., CALGreen Title 24 Energy Efficiency requirements and the Governor's Executive Order N-79-20 regarding electric vehicles) and local measures (i.e., SMUD's net zero emissions target by 2040) that were available to be accounted for within the CalEEMod model (as parameters within the model) are provided in the bullet list below (note: the associated CalEEMod measure, if applicable, is provided in brackets below).

- Install energy efficient (i.e., LED or better) lighting, as required by the 2019 version of CALGreen (for outdoor lighting) [Energy Mitigation, LE-1];
- Install energy efficient *(i.e., Energy Star)* appliances, consistent with the 2019 version of CALGreen [Energy Mitigation, BE-4];
- Install low-flow appliances, as required by the 2019 version of CALGreen (bathroom faucet, kitchen faucet, toilet, and shower) [Water Mitigation, WUW-1]; and
- Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity), as required by the 2019 version of CALGreen [Water Mitigation, WUW-4];
- Governor's Executive Order N-79-20 on electric vehicles, which would require sale only of zero-emission vehicles in California by 2035. This is anticipated to reduce on-road mobile emissions generated by the project by approximately 25%;[7]

[7] The 25% increase in electric vehicles as part of the vehicle fleet is a highly conservative estimate, as the average vehicle fleet turnover rate was approximately 10.7 years as of 2018, according to the National Household Travel Survey administered by the U.S. Energy Information Administration (See: https://www.eia.gov/todayinenergy/detail.php?id=36914). Buildout of the project is anticipated by 2040, which is five years after the Governor's Order on electric vehicles would take effect; therefore, a bare minimum of 25% turnover of the passenger vehicle fleet in California within this five-year period is anticipated.

- Receive all grid-base electricity from SMUD, which would achieve 100% renewable energy by project buildout [Energy Mitigation, AE-1, AE-2, AE-3].

Furthermore, the Specific Plan would implement all feasible SMAQMD BMPs for particulate matter emissions from land use development projects. The SMAQMD BMPs are required by existing regulations. The following list identifies the BMPs for operational PM emissions for land use development projects:

- Compliance with District rules that control operational PM and NOx emissions, including SMAQMD Rule 403 (Fugitive Dust). Rule 403 requires the project applicant to implement every reasonable method to control dust emissions. Actions include but are not limited to application of water or chemicals, asphalt, and/or oil depending on the dust-generating activity.
- Compliance with the mandatory measures in the California Building Energy Efficiency Standards (Title 24, Part 6) (i.e., CALGreen) that pertain to efficient use of natural gas for space and water heating and other uses at residential or non-residential land uses.
- Compliance with mandatory measures in the California Green Building Code (Title 24, Part 11). Current mandatory measures related to operational PM include requirements for bicycle parking, parking for fuel-efficient vehicles, electric vehicle charging, and fireplaces for non-residential projects. Residential project measures include requirements for electric vehicle charging and fireplaces.
- Compliance with anti-idling regulations for diesel-powered commercial motor vehicles (greater than 10,000 gross vehicular weight rating). This BMP focuses on non-residential land use projects (retail and industrial) that would attract these vehicles.

The Specific Plan would comply with each of the operational BMPs as promulgated by the SMAQMD for land use development projects.

Additionally, the proposed project would implement Mitigation Measure 3.2-3, which requires the Specific Plan to include all feasible elements from SMAQMD's best available mitigation measures that are available at the time of project design, where required to reduce project level impacts to a less-than-significant level.[8]

The following tables (Table 3.2-8 through 3.2-10) provide the entire Specific Plan's unmitigated operational emissions (i.e., all four phases), upon full buildout (i.e., after completion of Phase 4) under the annual, winter, and summer scenarios, as modeled. In addition, Table 3.2-11 through 3.2-13 provide the mitigated operational emissions. It should be noted that not all BMPs and

[8] It should be noted that, since the exact mitigation measures that would be incorporated into the project are not known at this time, mitigation reductions from the implementation of Mitigation Measure 3.2-3 were not modeled with CalEEMod as part of the criteria pollutant emissions estimates (as provided in Table 3.2-8 through 3.2-9).

mitigation are able to be modeled within CalEEMod. Therefore, the mitigated results shown in the following tables reflect a conservative estimate of Specific Plan operational emissions.

SOURCE: CALEEMOD (V.2016.3.2)

CEQA requires that EIRs identify and evaluate any significant environmental impacts of a proposed project. A project is determined to have potentially significant air quality impacts under CEQA if construction and/or operational emissions would exceed SMAQMD's established mass emission thresholds for ROG and NOx. Projects that exceed daily operational thresholds for ROG or NOx are considered operationally significant and required to prepare an Air Quality Mitigation Plan (AQMP). As shown in Tables 3.2-11 through 3.2-13, even with implementation of all feasible mitigation, the proposed project would not achieve the reductions required for ROG and NOx. Therefore, the proposed Specific Plan would also be required to implement Mitigation Measure 3.2-3, which requires the Project to ensure, through conditions of approval, that the proposed Project would reduce unmitigated operational mobile ROG and NOx emissions by at least 15%,

consistent with the requirements of an AQMP.[9] This would ensure that the proposed Project would achieve at least a 15 percent reduction in mobile ROG and NOx emissions, consistent with SMAQMD guidance. Therefore, this analysis, including Mitigation Measure 3.2-3, represents the AQMP for the proposed project.

As shown in Tables 3.2-8 and 3.2-11, the proposed Project would reduce ROG and NOx emissions between the unmitigated scenario and the mitigated scenario. The mitigated scenario includes project design features that would reduce emissions, consistent with the SMAQMD methodology for calculating percent reductions for the purposes of an AQMP.[10]

As shown in Table 3.2-8, the unmitigated Project mobile emissions would be approximately 2.5 tons per year of ROG emissions, and 14.2 tons per year of NOx emissions. However, after incorporating proposed Project design features (as described in detail above), the proposed Project would generate only 1.7 tons per year of ROG emissions, and 10.7 tons per year of NOx emissions (in the mitigated scenario). This reflects a reduction of approximately 31% and 25%, respectively, exceeding the required minimum 15% reduction as required by the SMAQMD for an AQMP for a project that had been included in the most current version of the SIP. Mitigation Measure 3.2-3 would ensure that implementation of the requisite project design features are included within the conditions of approval, prior to Project approval.

However, even with implementation this mitigation, the Specific Plan would not reduce operational emissions at full project buildout below the criteria pollutant operational thresholds for ROG and NOx. Therefore, the Specific Plan's operational criteria pollutant emissions would be considered to have a ***significant and unavoidable*** impact.

CONCLUSION

As shown in Table 3.2-7, implementation of the SMAQMD construction-related best management practices (as required) and Mitigation Measures 3.2-1 and 3.2-2 would ensure that project-related construction emissions during the construction timeframe would be below SMAQMD thresholds. Separately, with implementation of Mitigation Measure 3.2-3, the Specific Plan's operational emissions would be reduced. Specifically, Mitigation Measure 3.2-3 would ensure that a greater than 15% reduction in operational mobile ROG and NOx emissions would occur compared with the unmitigated scenario, due to project design features. However, even with implementation of this mitigation, the proposed Project's operational emissions at full project buildout are above the applicable criteria pollutant thresholds for ROG and NOx. Therefore, the Specific Plan's criteria pollutant emissions are conservatively considered to have a ***significant and unavoidable*** impact.

[9] An emissions reduction target of 15% is required of projects that have been included in the most current State Implementation Plan (SIP). The Project has been included in the most current version of the SIP.

[10] Phone correspondence with Paul Philley, SMAQMD Program Supervisor at 7pm on May 12, 2021, and 3:15pm on May 12, 2021.

MITIGATION MEASURE(S)

Mitigation Measure 3.2-1: *Require Implementation of SMAQMD Basic Construction Emission Control Practices. Where needed to reduce potentially significant impacts, the City shall require project applicants, as a condition of project approval, to incorporate the most current basic control measures recommended by SMAQMD to reduce fugitive PM_{10} dust emissions, where required.*

Mitigation Measure 3.2-2: *Require Compliance with SMAQMD PM Screening Criteria and Implementation of SMAQMD Enhanced Fugitive PM Dust Control Practices. For projects with a maximum daily disturbed area (i.e., grading, excavation, cut and fill) greater than 15 acres, project applicants, as a condition of project approval, shall perform screening level analysis of PM_{10} emissions during construction, and shall perform dispersion modeling if screening level analysis indicates that concentration-based limits may be exceeded (less than 50 µg/m^3 24-hour standard; 20 µg/m3 Annual Arithmetic Mean for PM_{10}; and less than 12 µg/m^3 Annual Arithmetic Mean for $PM_{2.5}$ for the maximally exposed individual sensitive receptor). If dispersion modeling indicates that these limits may be exceeded, and where needed to reduce potentially significant impacts, project applicants shall incorporate the most current enhanced fugitive PM dust control practices recommended by SMAQMD.*

Mitigation Measure 3.2-3: *Prior to the City's adoption of final plans, the City shall impose Conditions of Approval that memorialize those Project's design features that, when combined, would reduce Project operational ROG and NOx emissions to at least 15% below the emissions generated by the unmitigated version of the Project (i.e. prior to taking into account project design features). These design features may include those as described within the analysis contained within this DEIR, or a modified version thereof, sufficient such that the Project's operational ROG and NOx emissions are calculated (to the approval of the SMAQMD) to be at least 15% below the emissions calculated to be generated by the unmitigated version of the Project. If additional mitigation is required to achieve the 15% target, such mitigation shall be incorporated into the Project's Conditions of Approval, as applicable.*

Impact 3.2-2: Specific Plan implementation would not expose sensitive receptors to substantial pollutant concentrations and/or result in other emissions (such as those leading to odors) affecting a substantial number of people (Less than Significant)

CARBON MONOXIDE HOTSPOTS

Areas of vehicle congestion have the potential to create pockets of CO, called hotspots. These pockets have the potential to exceed the State 1-hour standard of 20 ppm or the 8-hour standard of 9.0 ppm. However, emissions from motor vehicles, the largest source of CO emissions, have been declining since 1985 despite increases in VMT due to the introduction of new automotive emission controls and fleet turnover. Consequently, no CO hotspots have been reported in the SVAB even at the most congested intersections. Furthermore, under existing and future vehicle emission rates, a project would have to increase traffic volumes at a single intersection by more

than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact.[11]

Buildout of the proposed Specific Plan would result in approximately 34,610 net new daily trips over existing conditions. However, distributing the total daily vehicle trips within the proposed Specific Plan Area and region and by peak hour would result in smaller traffic volumes at the various intersections. Thus, implementation of the proposed Specific Plan is not anticipated to produce the volume of traffic required to generate a CO hotspot. Therefore, implementation of the proposed Specific Plan would not have the potential to substantially increase CO hotspots at intersections in the vicinity of the Specific Plan Area, and impacts would be ***less than significant*** relative to this issue, and no additional mitigation is required.

TOXIC AIR CONTAMINANTS

A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or in serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air. However, their high toxicity or health risk may pose a threat to public health even at very low concentrations. In general, for those TACs that may cause cancer, there is no concentration that does not present some risk. This contrasts with the criteria pollutants for which acceptable levels of exposure can be determined and for which the State and federal governments have set ambient air quality standards.

Controlling air toxic emissions became a national priority with the passage of the Clean Air Act Amendments (CAAA) of 1990, whereby Congress mandated that the U.S. Environmental Protection Agency (EPA) regulate 188 air toxics, also known as hazardous air pollutants. The U.S. EPA has assessed this expansive list in its latest rule on the Control of Hazardous Air Pollutants from Mobile Sources (Federal Register, Vol. 72, No. 37, page 8430, February 26, 2007) and identified a group of 93 compounds emitted from mobile sources. In addition, EPA identified seven compounds with significant contributions from mobile sources that are among the national and regional-scale cancer risk drivers from their 1999 National Air Toxics Assessment. These are acrolein, benzene, 1,3-butidiene, diesel particulate matter plus diesel exhaust organic gases (diesel PM), formaldehyde, naphthalene, and polycyclic organic matter.

The 2007 EPA rule requires controls that will dramatically decrease Mobile Source Air Toxics (MSAT) emissions through cleaner fuels and cleaner engines. According to an FHWA analysis using EPA MOBILE6.2 model, even if vehicle activity (VMT) increases by 145 percent, a combined reduction of 72 percent in the total annual emission rate for the priority MSAT is projected from 1999 to 2050. California maintains stricter standards for clean fuels and emissions compared to the national standards; therefore, it is expected that MSAT trends in California will decrease consistent with or more than the U.S. EPA's national projections.

[11] Bay Area Air Quality Management District (BAAQMD), 2017. California Environmental Quality Act: Air Quality Guidelines, May.

In general, land uses that would require a permit from SMAQMD for emissions of TACs include chemical processing facilities, chrome-plating facilities, dry cleaners, and gasoline-dispensing facilities. As the proposed Specific Plan is a program-level document, it is currently unknown which types of stationary sources may be installed, if any. However, the proposed Specific Plan would generally prohibit the development of heavy industrial-type land uses. While development of land uses may result in stationary source emissions such as dry cleaners and restaurants with charbroilers or buildings with emergency generators, these types of land uses would not be large emitters. Additionally, they would be controlled by SMAQMD through permitting and would be subject to further study and health risk assessment prior to the issuance of any necessary air quality permits. Though these sources would incrementally contribute to the project's inventory individually, they would be mitigated to the standards identified above. Moreover, when warranted, individual development projects in the Plan Area would be required to conduct health risk assessments (where warranted by land use and proposal, as determined by the SMAQMD). Therefore, overall, impacts would be ***less than significant*** relative to this environmental issue.

ODORS

In addition to criteria pollutants and TACs, other emissions that have the potential to affect a substantial number of people are offensive odors. While offensive odors rarely cause any physical harm, they can be very unpleasant, leading to considerable distress among the public and often generating citizen complaints to local governments and the SMAQMD. The general nuisance rule (Health and Safety Code § 41700 and SMAQMD Rule 402) is the basis for the SMAQMD threshold. A project may reasonably be expected to have a significant adverse odor impact where it "generates odorous emissions in such quantities as to cause detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which may endanger the comfort, repose, health, or safety of any such person or the public, or which may cause, or have a natural tendency to cause, injury or damage to business or property."

Implementation of the Specific Plan would not place sensitive receptors adjacent to TACs above the applicable standards and thresholds. Similarly, implementation of the Specific Plan would not directly create or generate objectionable odors to a significant degree. The Specific Plan would also not place sensitive receptors near objectionable odors. Trash in enclosed areas from the commercial uses would be separated at a sufficient distance from nearby residences, and enclosed in industry-standard containers, such that odors from trash would not generally generate noticeable odors for nearby residential receptors.

Examples of facilities that are known producers of odors include: Wastewater Treatment Facilities, Chemical Manufacturing, Sanitary Landfill, Fiberglass Manufacturing, Transfer Station, Painting/Coating Operations (e.g., auto body shops), Food Processing Facility, Petroleum Refinery, Asphalt Batch Plant, and Rendering Plant. The Specific Plan would not develop any of these known producers of odors.

Separately, Specific Plan construction activities have the potential to generate objectionable odors on nearby existing residential receptors (such as those to the west and north of the Plan Area, or those within the Plan Area itself). Diesel-fueled construction equipment and heavy-duty trucks can

generate odorous diesel particulate matter (diesel PM) exhaust emissions that could adversely affect nearby receptors. However, the Specific Plan would be developed in phases over several years. Since only small portions of the Plan Area would be developed on a given day, odors from Specific Plan construction activities are expected to be minimal. In addition, the Plan Area is relatively flat, which would help to disperse odors for construction activities. Furthermore, as provided under Impact 3.2-2, the Specific Plan would be required to implement the SMAQMD's Basic Construction Emissions Control Practices (Best Management Practices), which would reduce PM emissions, thereby reducing the potential for project construction activities to generate odors that would affect a substantial number of people.

It should be noted that the California Supreme Court decision in the case of *California Building Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal.4th 369 clarified that lead agencies are not required by CEQA to analyze the impact of existing environmental conditions on a project's future users or residents unless the project will exacerbate the existing environmental hazards or conditions. This limits the CEQA analysis of existing odor source impacts on new receptors from a project (SMAQMD, 2018).[12] The Specific Plan would not exacerbate existing environmental odors. Therefore, the Specific Plan would have a ***less than significant*** impact with regard to the potential for odors.

CONCLUSION

The Specific Plan does not propose sensitive receptors that could be exposed to odors in the vicinity; nor does it propose uses that would create odors that could expose receptors in the area. Therefore, operation of the proposed Specific Plan would not result in significant objectionable odors. Impacts associated with exposure to odors would be ***less than significant.***

The Plan Area is located in an area that is designated attainment-unclassified for carbon monoxide. Therefore, no project-level conformity analysis is necessary for CO. Substantial concentrations of carbon monoxide are not expected at or along any streets or intersections affected by the development of the Plan Area. Impacts associated with carbon monoxide hotspots would be ***less than significant,*** and no additional mitigation is required.

Overall, while implementation of the Specific Plan, in and of itself, would not result in an increased exposure of sensitive receptors to localized concentrations of TACs, there is a potential for future commercial business activity, as permitted under the Specific Plan, to result in increased exposure of sensitive receptors to localized concentrations of TACs. The emission sources could be stationary sources and/or mobile source (i.e., diesel truck traffic). Because, at the Specific Plan level of land use planning, the City does not yet know the precise locations, configurations, and sizes of any future land uses within the Specific Plan that may generate sufficient levels of TACs to create the possibility of adverse health effects, it is premature, at the Specific Plan stage, to undertake an overall health risk assessment for the Specific Plan. Future health risk assessments for individual projects within the Specific Plan Area would be performed where warranted, as

[12] See Sacramento Metropolitan Air Quality Management District CEQA Guide, page 7-2.

required by SMAQMD requirements. Impacts associated with TACs would be ***less than significant,*** and no additional mitigation is required.

Impact 3.2-3: Specific Plan implementation has the potential to cause substantial adverse health effects on human beings from elevated pollutant concentrations, either directly or indirectly (Less than Significant with Mitigation)

Development that would be accommodated by the proposed Specific Plan could expose sensitive receptors to elevated pollutant concentrations during operational and construction activities. As stated, the planned improvements, objectives and policies under the proposed Specific Plan would generally support a sustainable development pattern in accommodating future growth within the Plan Area, which would generally contribute to reducing long-term criteria air pollutant emissions. However, the projected cumulative emissions associated with future development projects accommodated under the proposed Specific Plan would be in exceedance and could result in causing an exceedance of the AAQS. Therefore, as construction and operation of future individual development projects accommodated under the proposed Specific Plan could result in causing or contribute to a violation of the ambient air quality standards, impacts to air quality would be significant.

In October 2020, the SMAQMD published its *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District*. In it, the SMAQMD describes that it has developed a "Strategic Area Health Effects Screening Tool" that provides an estimate of the health effects for a CEQA project within the SMAQMD and the 5-Air-District Region with 656 pounds per day or less of NOx, ROG and $PM_{2.5}$ emissions.

If the proposed CEQA project is within close proximity of one of the six strategic area source locations identified by SMAQMD, the project proponent can discuss using the health effects from the Tool at that strategic area location with concurrence from the SMAQMD. If the project is not located near any of the six strategic area source locations, the project can utilize the South Sacramento strategic area location, since it represents the location with the estimated upper-bound of potential health effects that would be generated by the project. The Plan Area is not in close proximity to any of the six strategic area source locations. Therefore, the health effect results were utilized from the South Sacramento strategic area location, per SMAQMD guidance, to provide a conservative (i.e., upper bound) estimate of the potential health effects of the Specific Plan.

In accordance with the SMAQMD's "Strategic Area Health Effects Screening Tool", Table 3.2-11 (below) provides a summary of the estimated local health impact of the Specific Plan on people in the SACOG (i.e., 5-Air District) region. The estimated local health effects are provided in terms of number of health incidences, as well as percentage of incidences in proportion to the 5-Air District region as a whole. Detailed results of the screening tool can be found in Appendix B.

TABLE 3.2-11: PROJECT'S ESTIMATED CONTRIBUTION TO BACKGROUND HEALTH ACROSS THE SACOG REGION

SOURCE: SMAQMD (STRATEGIC AREA PROJECT HEALTH EFFECTS TOOL), 2020.

A qualitative analysis of the local health effects of the Specific Plan is also provided below.

OZONE

O_3 is not emitted directly into the air but is formed through complex chemical reactions between precursor emissions of (ROG) and oxides of nitrogen (NOx) in the presence of sunlight. The reactivity of O_3 causes health problems because it damages lung tissue, reduces lung function and sensitizes the lungs to other irritants. Scientific evidence indicates that ambient levels of O_3 not only affect people with impaired respiratory systems, such as asthmatics, but healthy adults and children as well. Exposure to O_3 for several hours at relatively low concentrations has been found to significantly reduce lung function and induce respiratory inflammation in normal, healthy people during exercise. This decrease in lung function generally is accompanied by symptoms including chest pain, coughing, sneezing and pulmonary congestion.

Studies show associations between short-term ozone exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to ozone may

increase the risk of respiratory-related deaths (U.S. Environmental Protection Agency 2019a). The concentration of ozone at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggests that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum ozone concentration reaches 80 parts per billion (U.S. Environmental Protection Agency 2019b).

Operational Emissions

Future development projects in the Plan Area would generate emissions of ROG and NOx during project operational activities, as shown in Tables 3.2-8 through 3.2-10. The CAA regulates these pollutants mainly because they contribute to ozone formation, but they can each cause adverse reactions in people on their own, as explained earlier in this chapter. Although the exact effects of project-level emissions on local health are not precisely known, it is likely that the increases in ROG and NOx generated by the proposed Specific Plan would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed Specific Plan are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the proposed Plan Area in comparison to Sacramento County as a whole. Instead, the increases in ROG and NOx generated by the proposed Specific Plan when combined with the existing ROG and NOx emitted regionally, would primarily affect people with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Construction Emissions

Although the exact effects of ROG and NO_x emissions on local health are not known, it is likely that the increases in ROG and NOx generated by future development projects during construction would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by buildout of the proposed Specific Plan are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the proposed Specific Plan in comparison to Sacramento County as a whole. Instead, the increases in ROG and NOx generated by the proposed Specific Plan, including during construction activities, when combined with the existing ROG and NOx emitted regionally, would affect people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area. However, it should be noted that, since construction emissions are temporary in nature, the potential for substantial health impacts due to Specific Plan construction activities is typically much less than for Specific Plan operational activities.

PARTICULATE MATTER

Based on studies of human populations exposed to high concentrations of particles (sometimes in the presence of SO_2) and laboratory studies of animals and humans, PM can cause major effects of

concern for human health. These include effects on breathing and respiratory symptoms, aggravation of existing respiratory and cardiovascular disease, alterations in the body's defense systems against foreign materials, damage to lung tissue, carcinogenesis and premature death. Small particulate pollution has health impacts even at very low concentrations – indeed no threshold has been identified below which no damage to health is observed. The major subgroups of the population that appear to be most sensitive to the effects of particulate matter include individuals with chronic obstructive pulmonary or cardiovascular disease or influenza, asthmatics, the elderly and children.

Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms. Studies show that every 1 microgram per cubic meter reduction in $PM_{2.5}$ results in a one percent reduction in mortality rate for individuals over 30 years old (Bay Area Air Quality Management District, 2017). Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function and the development of chronic bronchitis – and even premature death. Additionally, depending on its composition, both PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (U.S. Environmental Protection Agency 2019c).

Operational Emissions

Future development projects in the Plan Area would generate emissions of PM during project operational activities, as shown in Tables 3.2-8 through 3.2-10. Although the exact effects of such emissions on local health are not known, it is likely that the increases in PM generated by the proposed Specific Plan would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed Specific Plan are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison the Sacramento County and the wider region as a whole. Instead, the increases in PM generated by the proposed Specific Plan when combined with the existing PM emitted regionally, would affect people, especially those with impaired respiratory systems, located in the immediate vicinity of the Specific Plan Area. Nevertheless, if a health risk assessment is warranted for a specific facility within the Specific Plan Area, it would be prepared in accordance with Mitigation Measure 3.2-4.

Construction Emissions

Ambient levels of construction particulate matter emissions are likely to decrease in the future, based on current and future implementation of federal and/or state regulatory requirements, such as improvements to the statewide vehicle fleet over time (including the long-term replacement of internal combustion engine vehicles with electric vehicles in coming decades). Furthermore, based on the short-term nature of construction activities in comparison to operational activities, the potential for substantial health impacts due to particulate matter emissions during Specific Plan construction is limited.

DISCUSSION

As previously discussed, the magnitude and locations of any potential changes in ambient air quality, and thus health consequences, from these additional emissions cannot be quantified with a high level of certainty due to the dynamic and complex nature of pollutant formation and distribution (e.g., meteorology, emissions sources, sunlight exposure), as well as the variabilities in the receptors that reside in a particular area. The City of Citrus Heights is not aware of any air district in California that has an established methodology for correlating project-generated criteria pollutant emissions to health end points. From a qualitative perspective, it is well documented from scientific studies that criteria pollutants can have adverse health effects. The federal and state governments have established the NAAQS or CAAQS as an attempt to regionally, and cumulatively, assess and control the health effects that criteria pollutants have within Air Basins. It is anticipated that public health will continue to be affected by the emission of criteria pollutants, especially by those with impaired respiratory systems in the City of Citrus Heights and the surrounding region so long as the region does not attain the CAAQS or NAAQS. However, the increases of these pollutants generated by future development under the Specific Plan are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison to Sacramento County and the wider region as a whole. Instead, the increases in criteria pollutants generated by the proposed Specific Plan when combined with the existing criteria pollutants emitted regionally, would affect people, especially those with impaired respiratory systems, located in the immediate vicinity of the Specific Plan Area. Separately, localized construction activities are temporary in nature, and therefore, do not pose a threat to human health in the same manner as ongoing, chronic, lifetime exposure from projects during their operational phase.

CONCLUSION

The increases in criteria pollutants generated by the proposed Specific Plan when combined with the existing criteria pollutants emitted regionally, would affect people, especially those with impaired respiratory systems, located in the immediate vicinity of the Specific Plan Area. Construction emissions would be temporary in nature, while the operational activities of a project would be most likely to cause substantial adverse effects on human beings, since ongoing, chronic, and lifetime exposure to criteria pollutants are key in the level of health impact. However, the increases of these pollutants generated by the proposed Specific Plan are not on their own likely to generate an increase in the number of days exceeding the health-based NAAQS or CAAQS standards, based on the size of the Plan Area in comparison the Sacramento County and the wider region as a whole. For these reasons, with implementation of the mitigation measures contained under the previous impacts (i.e., Mitigation Measures 3.2-1 through 3.2-4, the Specific Plan would have a ***less than significant*** impact related to this topic.

See Impact 3.2-2 (previous) for a more detailed discussion of the potential risks from toxic air contaminants and carbon monoxide hotspots by the proposed Specific Plan.

This section provides a discussion of the prehistoric period background, ethnographic background, historic period background, and known cultural resources in the region. The regulatory setting specific to cultural resources is also discussed, as well as an analysis of potential impacts to cultural and tribal cultural resources associated with project implementation. Mitigation measures are identified, if necessary. This section is based in part on the following:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- *Cultural Resource Assessment for the Sunrise Tomorrow Specific Plan Area, City of Citrus Heights, Sacramento County, California* (Peak & Associates, Inc., 2021).

Comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic from the Native American Heritage Commission (NAHC, August 12, 2020). This comment is addressed within this section.

3.3.1 ENVIRONMENTAL SETTING

PREHISTORY

Until recent years, few archeological studies have been conducted in the region. Early excavations had focused either on the large, rich village sites in the Delta region and along the major waterways in the Central Valley, or on the higher elevation sites in proposed reservoir areas, along major Sierra Nevada waterways. As a result, chronological sequences have been established for each region, with later work emphasizing refinement of these sequences.

Increasing urbanization in the Sacramento region over the past twenty years has pushed development further from the major drainages and into the margin of the Sacramento Valley and the Sierra Nevada foothills. There is no established archeological sequence for the region, but the ties seem to be stronger to the Sierra Nevada.

The Plan Area is located between three areas with defined archeological sequences: the Oroville locality to the north, the Central Sierra area to the east, and the Central Valley/Delta area to the west. These sequences include many similar artifact types and dates for major cultural changes, but there are also significant differences between them. It is an important goal of archeology to determine how these differences relate to different cultural traditions, cultural adaptation to differing environmental conditions, or other natural or cultural influences. It is not clear at present which of these sequences best reflects the prehistory of the project vicinity or if a separate local sequence is necessary to adequately describe the area.

Resource CA-SAC-166, located about three miles southeast of the Plan Area, was subjected to a salvage excavation as described by Charles Gebhardt (1962). Gebhardt noted a Late Middle Horizon/Late Horizon occupation with artifact types “not out of place in Martis Valley and clearly transitional between the Sierra Nevada and Sacramento Valley cultures.”

It is clear that the most recent prehistoric cultures of the area reflect, in general, the late cultures of the Central Valley, though there are interesting local variations. Some of the differences clearly result from the greater wealth and population in the Valley, but other differences may reflect a technological response to differing ecological settings and resource exploitation techniques.

In the preceding phase of prehistory there is a consistent expression of high Sierra Nevada and Great Basin relationships of some sort. However, the projectile points that reflect this connection are often produced on material imported from the Coast Ranges, although manufactured on locally-available, non-obsidian materials is much more common. The reasons for this situation are not clear. This could also be a response to differing ecological settings, but the relationship between foothill sites and the Martis Culture proper is an open question.

ETHNOGRAPHY

At the time of the gold rush, the Plan Area would have existed within the territory occupied by the Nisenan Indians, identified by the language they spoke. There have been several general treatments of the Nisenan culture by Beals, 1933; Kroeber 1929, 1953; Littlejohn 1928; Wilson and Towne 1978; and Wilson 1982. There are also several more specific articles on various aspects of their culture as reported in the bibliography and elsewhere. The following text by Norman Wilson, where not cited, is derived from Wilson and Towne 1978 and Wilson 1982.

The Nisenan peoples occupied the drainages of the Yuba, Bear, and the American Rivers from the Sacramento River on the west to the summit of the Sierra in the east. The Foothill and Hill Nisenan peoples were distinctive from the Valley Nisenan and were loosely organized into tribelets or districts with large central villages, surrounded by smaller villages. These are often referred to as winter villages by older Indians. These central villages and their leaders seemed to have had power or control over the surrounding smaller villages and camps and specific surrounding territory (Beals 1933; Littlejohn 1928; Wilson and Towne 1978). These districts were oriented to the natural resources and the landforms. In the foothills and mountains, the major drainages became formal or informal boundaries with the land in between forming the district. Thus, the Placerville District is between the Cosumnes River and the Middle Fork of the American River, the Auburn District between the Middle Fork of the American River, and the Bear River and the Nevada City District between the Bear River and the Yuba River. There were other villages and headmen in these districts that also held significant power and at the present time it is not clear where most of these were.

In the valley, there is also the pattern of major villages controlling land and local groups of Indians. Different than the hills, the land between drainages becomes the separation between districts with the controlling villages situated along the major rivers. *Pujuni* at the mouth of the American River is a good example. There also seems to be a separation of the Valley Nisenan and the Foothill Nisenan near the edge of the valley where the foothills start. The Valley Nisenan peoples were more oriented to the Sacramento, American, Yuba, Feather and the Bear rivers on the valley floor. Their large villages with their complex and rich culture are usually found along these water courses. It is believed that they occupied both sides of the rivers and used the river courses for communication and major resource exploitation. Smaller stream courses were often occupied with

permanent villages and seasonal camp sites. They were not large villages, and some may reflect a budding-off of valley peoples as populations expanded in late times.

All the Nisenan depended on activities attuned to the seasonal ripening of plant foods and the seasonal movements and migration of the animals and the runs of fish. With the flooding of the valley in the winter and spring a great number of animals such as elk, antelope and bears moved to the natural levees along the rivers and up into the lower foothills. Along the foothill margins they joined the resident and migratory deer herds. Huge flocks of waterfowl visited the flooded areas between the rivers and the foothills, coveys of quail gathered in the fall, and pigeons were common in the fall and spring. Steelhead and salmon ran up most of the major streams including Secret Ravine and Auburn Ravine in the fall, winter and spring. The hunting of these plentiful resources was part of the foothill lifeway. This same bounty was available to the river-oriented valley peoples out on the valley floor and along the natural levees of the rivers. There was probably not a great deal of competition for resources at this time except in lean years. Both the valley and foothill peoples lived at the edges of rich ecotones: the rivers and the valley floor, and the valley floor and the foothills.

The valley floors between the rivers were not permanently occupied and became seasonal resource bases. In many places, the areas between the rivers were shallow overflow basins that flooded in the winter and spring creating great tule forests, ponds and swampy areas, and in some areas there were oxbow lakes and other permanent ponds. These were hard to cross until summer and became a major resource base for the valley groups. Access was often made possible by the burning of the tule. These areas were rich with plant and animal resources including herds of deer, elk and grizzly bears, and were exploited by the surrounding Indian people.

Two kinds of family houses were made. One was a more permanent winter house (*hu*) with a strong frame and covered with brush, mud or cedar, or pine bark. It was partially excavated with an inside hearth and in some cases a portable mortar set into the ground. Sleeping was done around the edges on mats and skins, with benches or shelves to hold equipment and foods (Beals 1933, Wilson n.d.). Houses were often up to 15 feet in diameter and provided shelter for several persons. These are often associated with the dance house (*kum*), sweat houses, and acorn granaries, and were part of the permanent villages.

The second type was a house to be used when away from the main village, which was made of a frame covered with brush, boughs, and tules. This second type of house was excavated slightly with the removed earth piled on the outside at the base to block the wind. This house type often did not have a hearth and was used for sleeping and storage only. These camp shelters would be taken down when the group moved on so that animals would not live in them. When rebuilding these houses, they were cleaned out and fresh earth was used for the floor. There was often a common firepit for several families associated with the temporary shelters. For a quick shelter in the summer, a low circular brush wall was built in a sheltered or shaded location.

HISTORICAL SETTING

Rancho San Juan

The Rancho San Juan was a 19,983-acre Mexican land grant given in 1844 by Governor Manuel Micheltorena to Joel P. Dedmond. The grant extended east of Eliab Grimes Rancho del Paso along the north bank of the American River, across from William Leidesdorff's Rancho Rio de los Americanos. The grant included present-day Orangevale, Fair Oaks, a portion of Citrus Heights and most of Carmichael.

Joel P. Dedmond, an American carpenter, claimed he had been in California since 1838. He then obtained Mexican citizenship, a lot in San Francisco, and the four and a half square league Rancho San Juan. In 1847, Dedmond sold his claim land to Hiram Grimes, the nephew of Eliab Grimes. Hiram Grimes later acquired Rancho del Paso and Rancho Pescadero.

With the cession of California to the United States following the Mexican–American War, the 1848 Treaty of Guadalupe Hidalgo provided that the existing land grants would be honored. As required by the Land Act of 1851, a claim for Rancho San Juan was filed with the Public Land Commission in 1852, and eventually, the grant was patented to Hiram Grimes in 1860.

Lawyers James Ben Ali Haggin (1822-1914) and Lloyd Tevis (1824-1899) acquired Rancho San Juan. In 1868, California Senator and President of California National Bank, Frederick K. Cox bought the southern portion of Rancho San Juan and other portions of the holdings were sold (Wikipedia: Rancho San Juan; Hoover, Rensch and Rensch 1970:299-300).

An early division of counties in California was by Township. The Sunrise Mall property lies within the eastern portion of the Center Township. Initial transportation in the region was along the Auburn Road, now Auburn Boulevard. Miners and teams travelling to the gold mining region traversed the route hauling goods from the waterfront in Sacramento, brought up the Sacramento River from San Francisco. In the early years the only town in the Center Township was the town of Antelope located on the route of the Central Pacific Railroad, over three miles north and west of the Sunrise Mall property. Antelope served as a shipping point for the agricultural products of the region, and a supply center for the local farmers.

Early Ownership

An early settler in the Center Township was Cornelius O'Donahue. O'Donahue paid to have his biography printed in the 1880 *History of Sacramento County*. He was born in Ireland in 1828, came to the United States in 1844, and to California in 1854. After working in mining for many years, in 1863 he purchased his home ranch of 160 acres in what is now Citrus Heights. The land lies on the west side of Van Maren Lane, north of Auburn Boulevard. Cornelius had two sons and a daughter with his first wife, and married again after the death of the first wife. That marriage resulted in one child, a daughter.

In 1872, Cornelius purchased 322 acres of Rancho San Juan, on the south side of Greenback Lane. The land extends from Fair Oaks Boulevard on the east, one mile westward (Thompson and West,

History of Sacramento County, 1880: 253). Cornelius Donahue travelled in 1879 to the Midwest. In 1880, he had a drawing made of his ranch, and a biography placed in the County history. He died in June 1881. His two sons and widow inherited the 322-acre ranch, and Mary Donahue inherited the main ranch. The 322-acre ranch is shown to be owned by John Donahue and Bros. on the 1885 County map. Mrs. C. Donahue is the owner of the 160-acre ranch (Cornelius O'Donahue probate file; Official County Map 1885. Some of the early records use the surname spelled "O'Donahue," but he is commemorated with a stained-glass window at a church in Fair Oaks as "Cornelius Donahue." To simplify, his family will be referred to as "Donahue" as his family switched to that form of the surname in about 1880).

The Donahue's youngest daughter, Catherine, married a neighbor, Adolph Van Maren, and in 1923, still retained ownership of the large portion of the family ranch, as well as many other holdings in Citrus Heights. Mrs. Donahue lived with the Van Marens in 1900. Daniel Donahue owned 302 of the 322 acres, with Lehan in control of the 20 acres at the corner of Greenback and Fair Oaks Boulevard (Official Map of Sacramento County 1923). This appears to be Daniel Lehan, son of Clara Donahue, sister of Daniel.

The Donahue brothers built a home on the 322-acre property, located on the western portion of their holding, about 1,000 feet south of Greenback Lane (1911 Antelope USGS topographic quadrangle). The home is not near the Plan Area.

Daniel Donahue died working in a field on the farm in 1920. He had nine children, including a daughter, May Loretta, married to Erle A. Henderson of Sacramento (*Sacramento Bee*, 31 December 1920). The ranch apparently is purchased or enters into the ownership through inheritance by the Hendersons who live in the City of Sacramento according to census records.

In 1958, the 300-acre Henderson ranch is sold by Earl and Jack Henderson to Charles Inks, Albert Kuhn and A.J. Murphy. A residential and commercial development was planned for the property (*Sacramento Bee*, 8 November 1958). For many years, this part of the County was considered to be part of Fair Oaks.

PLAN AREA

Setting

The Plan Area is located in an area with Whitney series soils, specifically Whitney fine sandy loam, deep phase, undulating to rolling topography (Weir 1950). The Whitney soil series is derived from decomposing sandstone and varies in depth. The deep phase may have a depth of 48 inches or more of weathered soil resting atop the parent sandstone bedrock.

The Plan Area was originally comprised mostly of low hills that rose above the terrain by as much as fifty feet. A small, intermittent water drainage was located in the extreme southwest corner and western edge in an area bordering what was later developed into Sunrise Boulevard. The closest permanent water source was Arcade Creek located about one-third mile north of the Plan Area. This section of Arcade Creek sits about 25 feet lower in elevation than the Plan Area.

Historical Context

In February 1968, James J. Cordano had just completed building and opening the largest shopping center in Sacramento County, Florin Center. It was the first to have three major department stores and an enclosed mall. Broadway-Hale Stores had acquired 100 acres of the Sunrise-Greenback property, and appeared to want to open a Weinstock's department store, the northern division of Broadway-Hale stores. Cordano projected in excess of one million square feet of building space and possibly four anchor tenant department stores (Weinstock's, Liberty House, Sears and J.C. Penney). He projected 60 stores in the new mall, with Florin Center opening with 46 stores (*Sacramento Bee,* 21 February 1968).

In November 1969, an article in the *Sacramento Bee* announced that the largest shopping complex in the area would be opened on the Greenback-Sunrise Corner. The estimate had been increased to more than 75 stores and 4 anchor department stores with a 1,200-foot-long air-conditioned mall, a number of free-standing buildings including service stores, banks, and a restaurant. The project's architectural firm was Burke, Kober, Nicolais & Archuleta. Lawrence Reed Moline would serve as the landscape architect for the Mall and the 7,000-car parking area.

James J. Cordano was to serve as the leasing agent. The co-developers were H & C Associates, consisting of the Ernest W. Hahn Company, a San Francisco Bay Area contractor, and James J. Cordano, a Sacramento realtor. The Hahn Company was known as primarily a construction company, but had developed fifteen shopping centers in California and Nevada.

The Mall was placed in a growth area and would draw customers from a wide area—Folsom, Roseville, Yuba City, Auburn and Placerville, as well as other suburban districts experiencing rapid growth. Cordano estimated 2,000 jobs would be created, and other businesses would be drawn to the area. The initial cost of construction was estimated at $30 million (*Sacramento Bee*, 12 November 1969).

Ground-breaking was done in a different manner. Civic leaders from the County were gathered at the Senator Hotel in downtown Sacramento on November 10, 1970, 17 miles from the site. After lunch, they watched a series of multi-colored ground-blasting explosions touched off by remote control (*Sacramento Bee*, 1 November 1970; 24 January 1983). The Mall was built on a slightly rolling property away from any natural water course, with the top 25 feet of the land cut away.

Sunrise Mall officially opened on April 19, 1972, with about two-thirds of the stores open for business. Weinstock's, at the northern end of the Mall had opened in February, and the remainder of the mall opened June 1, with two anchors opening after that in August and October.

Sunrise Mall received an award and commendation for building ramps for wheelchair accessibility, handicapped parking spaces designated, and drinking fountains and rest rooms to accommodate the handicapped (*Sacramento Union*, 20 April 1972).

Burke, Kober, Nicolais & Archuleta

The firm of architects that designed the Mall can be traced to an original firm of Burke and Kober, a firm in the 1950s specialized in designing retail stores. By 1955, the firm had become Burke

Kober Nicolais. In 1961, after becoming a licensed architect, Millard Archuleta joined the firm as a partner, becoming Burke, Kober, Nicolais, & Archuleta. The firm became recognized for their work on regional malls, medical facilities, banks and office buildings. Developer Ernest Hahn remained the firm's top client for many years.

In the lists of noted projects for the various partners of the firm, Sunrise Mall is not recognized as a major project of note (Millard Archuleta [Legacy.com]; Pacific Coast Architecture Database for: Eugene Burke; Charles McChesney Kober; Harold Nicolais; and Millard Archuleta).

Sunrise Mall

Sunrise Mall became an important shopping destination, being the only mall in a semi-rural area. Sales at the mall were high, and in 1983, the Mall was completely occupied and the closure of a store let the Mall management choose a replacement business that suited the combination of stores. The Mall provided a number of promotions to bring in more shoppers including antique shows, auto shows, traveling reptile zoo, antiques radio shows, and a circus (*Sacramento Bee*, January 24, 1983). A great deal of commercial development occurred around Sunrise Mall and Birdcage Center. The City of Citrus Heights incorporated on January 1, 1997, and the boundary for the new city included the Sunrise Mall and adjacent Birdcage Center properties.

Remodel

In 1999, a major update of the Sunrise Mall was undertaken to replace the look of the 1970s. Arden Fair Mall had just undergone a massive upgrade with the addition of a second floor, so a $10 million update was commissioned for Sunrise Mall. The change to the clean, classic design included repainting, complete re-construction of two major entrances, and the introduction of sunlight through the construction of skylights and domes. Some of the existing features of the mall were also removed as part of the remodel (*Sacramento Bee,* May 30, 1999).

Decline of Sunrise Mall

The continuing development of eastern Sacramento County and southern Placer County led to the development of many more local strip malls, and development of the Roseville Galleria and associated commercial zones. Thus, alternative shopping opportunities were provided closer to the residences of an increasingly denser developed region, perhaps in response to regional traffic problems and a desire to drive less miles for a shopping trip. In addition, the rise in on-line shopping has also taken its toll on shopping malls.

KNOWN CULTURAL RESOURCES

To determine if any known cultural resources are located in the Plan Area, several different sources were researched: Native American groups were contacted to see if they had any knowledge of resources within the Plan Area; a record search through the North Central Information Center (NCIC) was conducted to see if any prehistoric or historic period sites had been recorded in the Plan Area; and archival research was completed in an effort to document and evaluate the existing building complex.

Little has ever been written about the Sunrise Mall; the best source of information is the online version of the *Sacramento Bee* newspaper. Other sources of information include the Sunrise Mall office's holdings, and historic files held by the City of Citrus Heights. Assistance in research was also provided by Larry Fritz and Teena Stern of the Citrus Heights Historical Society.

A summary of the record search, Native American consultation, and field assessment that was performed for the Plan Area is included below.

Records Search

A review of records was conducted for the project site and a 0.25-mile radius through the NCIC of the California Historical Resources Information System on June 25, 2020 (NCIC File No.: SAC-90-92, Appendix 1 of Appendix C). Records and maps were checked for information on recorded sites and previous surveys within the Plan Area and surrounding area.

There are no recorded resources within the Plan Area, or within the search radius. There is one survey of all historical resources in Citrus Heights conducted in 2006; the boundaries of the study area for this report is shown to have included the Plan Area. Four other surveys have been conducted at least partially within the Plan Area radius, with no sites recorded.

Consultation

A check of the Sacred Lands files was conducted through the Native American Heritage Commission for Sacred Lands within the Plan Area. The results were negative (August 6, 2020, Appendix 2 of Appendix C). A list of Native American tribes who may have knowledge of cultural resources in the Plan Area was included with the Sacred Lands files response letter. As discussed below, all of the listed tribal groups were contacted by the City.

Three tribal groups appear on the AB 52 consultation list for the City of Citrus Heights:

- United Auburn Indian Community of the Auburn Rancheria;
- Wilton Rancheria; and
- Ione Band of Miwok.

AB 52 and SB 18 tribal consultation letters were sent on August 7, 2020 to the following:

- United Auburn Indian Community of the Auburn Rancheria (Gene Whitehouse, Chairperson);
- Wilton Rancheria (Jesus Tarango, Chairperson; Dahlton Brown, Director of Administration; Ralph Hatch, Cultural Preservation Department; and Antonio Ruiz, Cultural Resources Officer); and
- Ione Band of Miwok (Sara Setchwaelo, Chairperson).

SB 18 tribal consultation letters were sent on August 11, 2020 to the following:

- Buena Vista Rancheria of Miwok Indians (Rhonda Morningstar Pope, Chairperson);
- Nashville Enterprise Miwok-Maidu-Nishinam Tribe (Cosme Valdez, Chairperson);

- Shingle Springs Band of Miwok Indians (Regina Cuellar, Chairperson);
- Tsi Akim Maidu (Grayson Coney); and
- Colfax-Todds Valley Consolidated Tribe (Clyde Prout, Chairperson; Pamela Cubbler).

As a result of the tribal consultation letters, communications were received from the following tribal groups:

- Buena Vista Rancheria of Miwok Indians;
- Shingle Springs Band of Miwok Indians;
- United Auburn Indian Community of the Auburn Rancheria; and
- Wilton Rancheria.

On August 26, 2020, Richard Hawkins, Tribal Historic Preservation Officer with the Buena Vista Rancheria, reported the group was unaware of "Native Cultural Resources" present at the project location, and asked to be notified if something were to be found in the Plan Area.

On August 26, 2020, the City of Citrus Heights received a letter from the Shingle Springs Band of Miwok Indians requesting consultation under AB 52. On September 9, 2020, the group was informed that the Shingle Springs Band of Miwok Indians is not on the City's AB 52 tribal consultation list, but could consult under SB 18. The group was sent copies of the City's standard mitigation measures related to cultural resources, as well as the NCIC record search results indicating negative results. A date and time were assigned to the group for a project orientation meeting on September 21, 2020; however, no further communication or contact has been received from the group.

On September 10, 2020, Anna Starkey with the United Auburn Indian Community of the Auburn Rancheria reported that no known tribal cultural resources are present in the project area. The group requested to see the environmental documents for the project, and to be notified if there is an unanticipated cultural or archaeological resource in the Plan Area. The group was sent copies of the City's standard mitigation measures related to cultural resources, as well as the NCIC record search results indicating negative results, and the City concluded there was no request for consultation.

For the AB 52 consultation, tribal groups had thirty days to respond (i.e., responses must have been received by September 8, 2020). None of the contacted individuals or tribal groups responded to the consultation letters in the 30-day period; however, Mariah Mayberry of the Wilton Rancheria replied to the request on September 10, 2020. This request was outside the 30-day AB 52 response period; as such, no consultation with this group is required or will be undertaken. The group was notified with a letter from the City on September 11, 2020 noting that they may consult on any CEQA documents like all stakeholders. The group was also sent copies of the City's standard mitigation measures related to cultural resources, as well as the NCIC record search results indicating negative results, on September 11, 2020.

As of November 4, 2020, no responses have been received from any of the other tribal groups contacted by the City, including the following:

- Ione Band of Miwok Indians (Sara Setchwaelo, Chairperson);
- Nashville Enterprise Miwok-Maidu-Nishinam Tribe (Cosme Valdez, Chairperson);
- Tsi Akim Maidu (Grayson Coney); and
- Colfax-Todds Valley Consolidated Tribe (Clyde Prout, Chairperson; Pamela Cubbler).

No previously known resources were identified by any of the contacted tribal groups.

Field Assessment

A typical field survey of the Plan Area is not possible as no portion of the original development site exists for inspection. Instead, photography of the existing building complex was reviewed to form a permanent part of the recordation with a Department of Parks and Recreation (DPR) 523 site record. The form will be filed at the NCIC of the California Historical Resources Information System, and also in the City's historical files. In this manner, any future party interested in the history of the Sunrise Mall will be able to see images of the original mall and the current (2020) Sunrise Mall.

BUILDING COMPLEX DESCRIPTION

The Plan Area is developed with a single story, rectangular-shaped mall with four anchor stores located along the north, east (two), and south facing sides. Seven other single-story commercial buildings surround the main mall complex within the Plan Area. The mall and associated businesses within the Plan Area opened in part in April 1972.

The main mall currently has 91 store spaces with 1.1 million square feet of retail space. The main entrance faces to the west. The four anchor stores are multi-storied with two floors at the JC Penney and former Sears (north and south ends of mall, respectively) and three floors at the two Macys anchor buildings located along the east facing façade of the main mall building.

The main mall underwent a major renovation in 1999 with the false drop ceiling replaced with two large skylights at the two primary entrances and regularly spaced strips of skylights spanning the mall interior. Seating with potted plants and new carpeting were also added to the interior at this time. In 2007, the owners added a 500-seat food court on the east side of the mall, near the northern Macys Men's store.

3.3.2 REGULATORY SETTING

FEDERAL

National Historic Preservation Act

The National Historic Preservation Act was enacted in 1966 as a means to protect cultural resources that are eligible to be listed on the National Register of Historic Places (NRHP). The law sets forth criterion that is used to evaluate the eligibility of cultural resources. The NRHP is composed of districts, sites, buildings, structures, objects, architecture, archaeology, engineering, and culture that are significant to American History.

Virtually any physical evidence of past human activity can be considered a cultural resource. Although not all such resources are considered to be significant and eligible for listing, they often provide the only means of reconstructing the human history of a given site or region, particularly where there is no written history of that area or that period. Consequently, their significance is judged largely in terms of their historical or archaeological interpretive values. Along with research values, cultural resources can be significant, in part, for their aesthetic, educational, cultural and religious values.

STATE

California Register of Historic Resources

The California Register of Historical Resources (CRHR) was established in 1992 and codified in the Public Resource Code §5020, 5024 and 21085. The law creates several categories of properties that may be eligible for the CRHR. Certain properties are included in the program automatically, including: properties listed in the NRHP; properties eligible for listing in the NRHP; and certain classes of State Historical Landmarks. Determining the CRHR eligibility of historic and prehistoric properties is guided by CCR §§15064.5(b) and Public Resources Code (PRC) §§21083.2 and 21084.1. NRHP eligibility is based on similar criteria outlined in Section 106 of the NHPA (16 U.S. Code [USC] 470).

Cultural resources, under CRHR and NRHP guidelines, are defined as buildings, sites, structures, or objects that may have historical, architectural, archaeological, cultural, or scientific importance. A cultural resource may be eligible for listing on the CRHR and/or NRHP if it:

- is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- is associated with the lives of persons important in our past;
- embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual or possesses high artistic values; or
- has yielded, or may be likely to yield, information important in prehistory or history.

If a prehistoric or historic period cultural resource does not meet any of the four CRHR criteria, but does meet the definition of a "unique" site as outlined in PRC §21083.2, it may still be treated as a significant resource if it is: an archaeological artifact, object or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- it contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information,
- it has a special and particular quality such as being the oldest of its type or the best available example of its type, or
- it is directly associated with a scientifically recognized important prehistoric or historic event.

California Environmental Quality Act

The California Environmental Quality Act (CEQA) Guidelines §15064.5 provides guidance for determining the significance of impacts to archaeological and historical resources. Demolition or material alteration of a historical resource, including archaeological sites, is generally considered a significant impact. Determining the CRHR eligibility of historic and prehistoric properties is guided by CCR §§15064.5(b) and Public Resources Code (PRC) §§21083.2 and 21084.1. NRHP eligibility is based on similar criteria outlined in Section 106 of the NHPA (16 U.S. Code [USC] 470).

CEQA also provides for the protection of Native American human remains (CCR §15064.5[d]). Native American human remains are also protected under the Native American Graves Protection and Repatriation Act of 1990 (25 USC 3001 et seq.), which requires federal agencies and certain recipients of federal funds to document Native American human remains and cultural items within their collections, notify Native American groups of their holdings, and provide an opportunity for repatriation of these materials. This act also requires plans for dealing with potential future collections of Native American human remains and associated funerary objects, sacred objects, and objects of cultural patrimony that might be uncovered as a result of development projects overseen or funded by the federal government.

Assembly Bill 52

AB 52, approved in September 2014, creates a formal role for California Native American tribes by creating a formal consultation process and establishing that a substantial adverse change to a tribal cultural resource has a significant effect on the environment. Tribal cultural resources are defined as:

1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
   A) Included or determined to be eligible for inclusion in the CRHR
   B) Included in a local register of historical resources as defined in PRC Section 5020.1(k)
2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in PRC Section 5024.1 (c). In applying the criteria set forth in PRC Section 5024.1 (c) the lead agency shall consider the significance of the resource to a California Native American tribe.

A cultural landscape that meets the criteria above is also a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape. In addition, a historical resource described in PRC Section 21084.1, a unique archaeological resource as defined in PRC Section 21083.2(g), or a "non-unique archaeological resource" as defined in PRC Section 21083.2(h) may also be a tribal cultural resource if it conforms with above criteria.

AB 52 requires a lead agency, prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for a project, to begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of a proposed project if: (1) the California Native American tribe requested to the lead agency, in writing, to be informed by the lead agency through formal notification of proposed projects in the

geographic area that is traditionally and culturally affiliated with the tribe, and (2) the California Native American tribe responds, in writing, within 30 days of receipt of the formal notification, and requests the consultation.

Assembly Bill 978

In 2001, AB 978 expanded the reach of Native American Graves Protection and Repatriation Act of 1990 and established a state commission with statutory powers to assure that federal and state laws regarding the repatriation of Native American human remains and items of patrimony are fully complied with. In addition, AB 978 also included non-federally recognized tribes for repatriation.

LOCAL

City of Citrus Heights General Plan

The Citrus Heights General Plan contains the following goals and policies that are relevant to cultural and tribal resources:

RESOURCE CONSERVATION ELEMENT

Goal 42: Preserve and protect the City's Native American heritage.

> **Policy 42.1:** Determine early in the planning process whether archaeological resources may potentially be located on a development site.
>
> **Policy 42.2:** Require that any development and tentative subdivision map approvals include the condition that upon discovery of any archaeological artifacts, development activity will cease immediately and a professional archaeologist will be consulted.

Goal 43: Preserve and protect places that embody the City's social, architectural and agricultural history.

> **Policy 43.1:** Encourage property owners to maintain and preserve historic properties in the best possible condition.
>
> **Policy 43.2** Incorporate natural resources such as land and water into development when appropriate to understanding and appreciating the history of a site.
>
> **Policy 43.3:** Support preservation of historic resources, including providing for adaptive reuse where appropriate.

3.3.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Project is considered to have a significant impact on cultural and tribal cultural resources if it will:

- Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines §15064.5;
- Cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5;
- Disturb any human remains, including those interred outside of formal cemeteries;
- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:
  1) listed or eligible for listing on the California Register of Historical Resources, or on a local register of historical resources as defined in Public Resources Code section 5020.1(k); or
  2) a resource determined by a lead agency, in its discretion and supported by substantial evidence, to be significant according to the historical register criteria in Public Resources Code section 5024.1 (c), and considering the significance of the resource to a California Native American tribe.

IMPACTS AND MITIGATION MEASURES

Impact 3.3-1: Specific Plan implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5 (Less than Significant)

For the purposes of CEQA, a historical resource is a resource listed in, or determined eligible for listing in, the CRHR. When a project will develop or redevelop a site, it needs to be determined whether the site is a historical resource. Normally, a building is not considered potentially eligible for listing in the CRHR until the building is 50 years old. Although the building is 48 years old, a brief evaluation for the CRHR was completed.

As noted in the Regulatory Setting section, cultural resources, under CRHR and NRHP guidelines, are defined as buildings, sites, structures, or objects that may have historical, architectural, archaeological, cultural, or scientific importance. A cultural resource may be eligible for listing on the CRHR and/or NRHP if it:

- **Criterion A:** is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- **Criterion B:** is associated with the lives of persons important in our past;
- **Criterion C:** embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual or possesses high artistic values; or
- **Criterion D:** has yielded, or may be likely to yield, information important in prehistory or history.

The following discussion evaluates the mall against each of the four criteria.

CRITERION A

The development of the Sunrise Mall may have provided a financial impetus for the growth of housing in the northeastern portion of Sacramento County starting in the early 1970s. However, like other agricultural regions in the County, growth in the vicinity of the Plan Area was inevitable due to the availability of ample land area at reasonable prices. As such, growth in the vicinity would have occurred with or without the Sunrise Mall. . The lands of the region were open plains and were productive for orchards after the introduction of irrigation waters from the North Fork system. Many of the areas north of Madison Avenue were primarily in use for dry land farming, which were not particularly valuable crops. Farmers were eventually forced to sell as land values drove up.

The construction of Sunrise Mall did not make a significant contribution to the suburban growth that occurred throughout many portions of California in the 1970s and 1980s, nor any other broad pattern of California history or cultural heritage. Overall, the Sunrise Mall is not eligible for the CRHR under Criterion A.

CRITERION B

The only potentially important people in association with the Sunrise Mall would be the architects, Burke, Kober, Nicolais & Archuleta. Research indicates that the firm changed organization and partners a number of times over the past several decades. None of the architects are particularly well-known and none list Sunrise Mall as a notable project in their biographies. This building complex is more utilitarian than a design achievement. For these reasons, Sunrise Mall is not eligible for the CRHR under Criterion B.

CRITERION C

Sunrise Mall is a typical suburban shopping mall from the 1970s with no distinctive features. One of the few unique properties was the inclusion of accommodations to aid disabled patrons, beginning in the parking lot. Even though the mall was pioneering in the voluntary inclusion of such features, the Americans with Disabilities Act of 1990 made the requirements more detailed, became the law of the land, and strengthened over the years with improvements and additional features required for accessibility. As such, the inclusion of features for disabled patrons would not qualify as a distinctive characteristic. Sunrise Mall is in no way distinctive in form, and does not embody any distinctive characteristics of a type, period, region, or method of construction. Overall, the Sunrise Mall is not eligible for the CRHR under Criterion C

CRITERION D

The Plan Area has an extremely low potential for the presence of buried prehistoric period cultural resources due to the absence of permanent surface water features and sediment that was derived from naturally weathering bedrock. Additionally, as noted previously, the original rolling hills present in the Plan Area prior to construction of the mall were cut down by at least 25 feet to create a level building site. If a prehistoric or historic site had ever existed on the property, it would have been removed in the land-levelling, the apparent first stage of the mall construction.

The Plan Area cannot yield information important in history or prehistory; as such, the Sunrise Mall is not eligible for the CRHR under Criterion D.

CONCLUSION

Sunrise Mall is not an important property under the criteria of the CRHR. There are no historical resources that have been identified in the Plan Area on maps and files maintained by the NCIC. As such, Specific Plan implementation would not cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5. Therefore, this impact would be ***less than significant***.

Impact 3.3-2: Specific Plan implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5 (Less than Significant with Mitigation)

No archaeological resources have been identified in the Plan Area on maps and files maintained by the NCIC. The Plan Area has an extremely low potential for the presence of buried archaeological resources due to the absence of permanent surface water features and sediment that was derived from naturally weathering bedrock. Additionally, as noted above, the original rolling hills present in the Plan Area prior to construction of the mall were cut down by at least 25 feet to create a level building site. The Plan Area is either covered by a building complex or by asphalt and landscaping in the many acres of parking lots surrounding the buildings.

It is not anticipated that ground disturbing activities would result in impacts to archaeological resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown archaeological resource. Specific Plan implementation may cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5. The implementation of Mitigation Measures 3.3-1 and 3.3-2 below would ensure that this potential impact is reduced to a ***less than significant*** level.

MITIGATION MEASURE(S)

Mitigation Measure 3.3-1: *Prior to any ground disturbance activity, the City shall ensure that a Contractor Awareness Training Program is developed and delivered to train equipment operators about cultural resources. The program shall be designed to inform construction personnel about federal and state regulations pertaining to cultural resources; the subsurface indicators of resources that shall require work stoppage; procedures for notifying the City of any occurrences; and project-specific requirements; and enforcement of penalties and repercussions for non-compliance with the program.*

The training shall be prepared by a qualified professional archaeologist and reviewed by City for approval, and may be provided in an audio-visual format, such as a DVD. The contractor shall provide culturally-affiliated tribes that consulted on the project the option of attending the initial training in person and/or providing additional materials germane to the unanticipated discovery of cultural resources for incorporation into the training.

The training shall be provided once to the Construction Contractor's superintendent, who shall then be responsible for ensuring that all future equipment operators and personnel view the video and review training materials prior to their first excavation on the property. All trained personnel shall be required to sign a form that acknowledges receipt of the training. A copy of the form shall be provided to the City of Citrus Heights as proof of compliance.

Mitigation Measure 3.3-2: *If subsurface deposits believed to be cultural in origin are discovered during construction, all work shall halt within a 50-foot radius of the discovery, and the developer shall immediately notify the City of Citrus Heights Planning Manager. The contractor shall retain a qualified professional archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeology and subject to approval by the City, to evaluate the significance of the find and develop appropriate management recommendations in consultation with the Buena Vista Rancheria and the United Auburn Indian Community of the Auburn Rancheria. All management recommendations shall be provided to the City in writing for the City's review and approval. If recommended by the qualified professional and approved by the City, this may include modification of the no-work radius. The following notifications shall apply depending on the nature of the find, subject to the review and approval of the City:*

1. *Work may resume immediately, and no agency notifications are required if: 1) the professional archaeologist determines, in consultation with the Buena Vista Rancheria and the United Auburn Indian Community of the Auburn Rancheria, that the find does not represent a cultural resource.*

2. *If the professional archaeologist determines that the find does represent a cultural resource from any time period or cultural affiliation, the City shall be notified immediately, to consult on a finding of eligibility and implementation of appropriate treatment measures, if the find is determined to be a historical resource or archaeological resource under CEQA, as defined in Section 15064.5(a) and 15064.5(c) of the CEQA Guidelines. Work shall not resume within the no-work radius until the City, through consultation as appropriate, determines that the site either: 1) is not a historical resource or archaeological resource under CEQA, as defined in Section 15064.5(a) and 15074.5(c) of the CEQA Guidelines; or 2) that the treatment measures have been completed to its satisfaction.*

Impact 3.3-3: Specific Plan implementation may disturb human remains, including those interred outside of formal cemeteries (Less than Significant with Mitigation)

Indications suggest that humans have occupied Sacramento County for over 10,000 years and it is not always possible to predict where human remains may occur outside of formal burials. Therefore, excavation and construction activities, regardless of depth, may yield human remains that may not be interred in marked, formal burials.

Under CEQA, human remains are protected under the definition of archaeological materials as being "any evidence of human activity." Additionally, Public Resources Code Section 5097 has

specific stop-work and notification procedures to follow in the event that human remains are inadvertently discovered during Project implementation.

While no human remains were found during surveys of the Plan Area, implementation of the following mitigation measure would ensure that all construction activities which inadvertently discover human remains implement state-required consultation methods to determine the disposition and historical significance of any discovered human remains. The following mitigation measure would ensure that any discovered human remains are evaluated and addressed in compliance with State law and would reduce this impact to a ***less-than-significant*** level.

MITIGATION MEASURE(S)

Mitigation Measure 3.3-3: *If human remains, or remains that are potentially human, are discovered during construction, the construction supervisor or on-site archaeologist shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641) and shall notify the Sacramento County Coroner (per §7050.5 of the Health and Safety Code) and the City. The provisions of §7050.5 of the California Health and Safety Code, § 5097.98 of the California Public Resources Code, and Assembly Bill 2641 shall be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, the Coroner will notify the Native American Heritage Commission, which then will designate a Native American Most Likely Descendant (MLD) for the project (§ 5097.98 of the Public Resources Code). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the Landowner does not agree with the recommendations of the MLD, the NAHC can mediate (§ 5097.94 of the Public Resources Code). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (§ 5097.98 of the Public Resources Code). This will also include either recording the site with the NAHC or the appropriate information center; using an open space or conservation zoning designation or easement; or recording a reinternment document with the County in which the property is located (AB 2641). Work shall not resume within the no-work radius until the City, through consultation as appropriate, determines that the treatment measures have been completed to its satisfaction.*

Impact 3.3-4: Specific Plan implementation may cause a substantial adverse change in the significance of a tribal cultural resource (Less than Significant with Mitigation)

Early consultation with the culturally and traditionally affiliated Native American Tribes was initiated in the summer of 2020. As described under the Consultation heading in the Existing Setting section, the City of Citrus Heights sent outreach letters to all of tribal representatives pursuant to AB 52 and SB 18. None of the tribes that were contacted identified any tribal cultural resources in the Plan Area.

No tribal cultural resources have been identified within or adjacent to the Plan Area. As with most projects in the region that involve ground-disturbing activities, there is the potential for discovery of a previously unknown tribal cultural resource. Implementation of the following mitigation measure, in addition to Mitigation Measures 3.3-1 through 3.3-3, would ensure that any finds are

appropriately evaluated, documented, and addressed and would reduce this potential impact to a ***less than significant*** level.

MITIGATION MEASURE(S)

Mitigation Measure 3.3-4: *A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the City shall contact the Buena Vista Rancheria and the United Auburn Indian Community of the Auburn Rancheria. A tribal representative shall be invited to, at its discretion, voluntarily inspect the project location, including any soil piles, trenches, or other disturbed areas, within the first five days of ground-breaking activity. Construction activity may be ongoing during this time.*

Should the tribe choose not to perform a field visit within the first five days, construction activities may continue as scheduled, as long as notification was made.

This page left intentionally blank.

The purpose of this section is to disclose and analyze the potential impacts associated with the geology of the Project region and general vicinity, and to analyze issues such as the potential exposure of people and property to geologic hazards, landform alteration, and erosion. This section is based in part on the following:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- *Web Soil Survey (*United States Department of Agriculture Natural Resources Conservation Service, 2020);
- *Sacramento County – North Basin Groundwater Management Plan* (Sacramento Groundwater Agency [SGA], December 2014);
- *SGA Basin Management Report – 2016 Update* (SGA, January 2016); and
- *Soil Survey of Sacramento County, California* (USDA, 1993).

No comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic.

As discussed in the Initial Study prepared for the Project (see Appendix A), there would be ***no impact*** associated with the use of septic tanks or alternative wastewater disposal systems. Additionally, as described in the Citrus Heights General Plan EIR, the majority of the City's planning area is designated as Mineral Resource Zone (MRZ) 1, where no significant mineral deposits are present. A small portion of the planning area is defined as MRZ-3, which has unknown mineral resources. However, because the planning area is an urbanized area and because the Draft General Plan does not propose to change existing planned land uses, extraction of any potential mineral resources is unlikely. The City's General Plan EIR found that no impact related to mineral resources would occur.

The Plan Area is currently developed with the Sunrise Mall and is located within an area designated as MRZ-1. The MRZ-1 designation applies to areas where adequate information indicates that no significant mineral deposits are present, or where there is little likelihood for their presence. There are no substantial aggregate materials located within the Plan Area. Therefore, the Specific Plan would not result in the loss of availability of a known mineral resource or locally-important mineral resources recovery site. Therefore, there is ***no impact*** related to mineral resources.

Issues associated with septic tanks and mineral resources will not be addressed further.

3.4.1 ENVIRONMENTAL SETTING

REGIONAL GEOLOGY

The Specific Plan Area is located near the center of the Sacramento Valley, approximately 13 miles northeast of the confluence of the American and Sacramento Rivers. The Sacramento Valley is

bordered by the Coast Ranges and Delta on the west and the foothills of the Sierra Nevada to the east.

The Sacramento Valley has been filled over time with up to a six-mile thick sequence of interbedded clay, silt, sand, and gravel deposits. The sediments range in age from more than 144 million years old (Jurassic Period) to less than 10,000 years (Holocene). The most recent sediments consist of coarse-grained (sand and gravel) deposits along river courses and fine-grained (clay and silt) deposits located in low-lying areas or flood basins and are referred to as alluvial deposits. These deposits are loose and not well consolidated soils.

Older alluvial deposits underlie the edges of the Valley. The older alluvial deposits are exposed in the foothill regions in the eastern portion of the county. The alluvial deposits, which slope gradually toward the center of the Valley, contain most of the groundwater supplies in region. The foothills of the coast ranges to the west of the Specific Plan Area are underlain by alluvial deposits and older marine sediments deposited during the Tertiary Period when an inland sea occupied the Great Valley.

Great Valley Geomorphic Province

The Great Valley is an alluvial plain, about 50 miles wide and 400 miles long, between the Coast Ranges and Sierra Nevada. The Great Valley is drained by the Sacramento and San Joaquin rivers, which join and enter San Francisco Bay. The eastern border is the west-sloping Sierran bedrock surface, which continues westward beneath alluvium and older sediments. The western border is underlain by east-dipping Cretaceous and Cenozoic strata that form a deeply buried synclinal trough, lying beneath the Great Valley along its western side.

City of Citrus Heights

The Great Valley is divided into various geomorphic subunits characterized by Holocene deposits, including the low-lying Delta lands that extend along Sacramento County's western boundary. The City of Citrus Heights General Plan Planning Area is located within the Delta subunit of the Great Valley – a Holocene floodplain containing peat deposits.

The geological formations underlying the majority of the City of Citrus Heights General Plan Planning Area include the Riverbank Formation, located in the southwestern portion of the Planning Area along Cripple Creek and Arcade Creek, and the Turlock Lake Formation, located throughout the Planning Area. The Turlock Lake Formation is from the early to middle Pleistocene period making it the oldest formation in the Planning Area. The Turlock Lake Formation is estimated to date back between approximately 450,000- and 600,000-years before present (BP), whereas the Riverbank Formation is estimated to date back to between approximately 130,000- and 450,000-years BP. The Riverbank Formation consist of weathered reddish gravel, sand, and silt sediments that form alluvial terraces and fans. The sediments of the Turlock Lake Formation consist of weathered arkosic gravels with small amounts of metamorphic rock fragments and quartz pebbles, as well as brown to tan sandstone and siltstone. The Turlock Formation represents eroded alluvial fans deprived primarily from the plutonic rocks of the Sierra Nevada to the east.

The U.S. Department of Agriculture (USDA) Soil Conservation Service produces maps classifying soil groups based on physical, hydrologic, and chemical properties. According to the USDA Soil Survey of Sacramento County (Soil Survey), the Planning Area contains 11 separate soil types; however, the predominant soil types in the City of Citrus Heights General Plan Planning Area are urban soils including the Urban land-Xerarents-Fiddyment complex and the Figgyment-Orangevale-Urban land complex.

SITE GEOLOGY

Soil Survey

A Custom Soil Survey was completed for the Specific Plan Area using the Natural Resources Conservation Service (NRCS) Web Soil Survey program. The NRCS Soils Map is provided in Figure 3.4-1 and Table 3.4-1 identifies the type and range of soils found in the Plan Area.

TABLE 3.4-1: SPECIFIC PLAN AREA SOILS

UNIT SYMBOL	*NAME*	*ACRES IN SPECIFIC PLAN AREA*	*PERCENT OF SPECIFIC PLAN AREA*
227	Urban Land	94.79	98.9%
229	Urban land-Xerarents-Fiddyment complex	1.01	1.1%

SOURCE: NRCS CUSTOM SOIL SURVEY 2020.

As shown in Figure 3.4-1, the majority of soil in the Plan Area (94.79 acres) is Urban Land while 1.01 acres generally along the southern boundary of the Plan Area is Urban Land – Xerarents-Fiddyment Complex. The following describes the Fiddyment and Xerarents soils series.

Fiddyment. The Fiddyment series consists of moderately deep, well drained soils formed in material weathered from consolidated sediments of mixed rock sources. Fiddyment soils are on nearly level to rolling low terraces and hills. This soils series is well drained, has slow to medium runoff, and very slow permeability. Water perches above the claypan for short periods after periods of high rainfall in December through April. The soil is used for rangeland, non-irrigated small grain crops, and urban development. Some areas are used for irrigated pasture. Natural vegetation is annual grasses and forbs such as soft chess, oats, and filaree and a few scattered oaks.

Xerarents. The Xerarents series consists of deep to very deep, well drained, altered soils that commonly have a buried soil. Xerarents soils are found in filled areas on hills, low terraces, and high terraces (i.e., areas shaped for urban development). Xerarents form in fill material mixed by grading and excavation activities. The fill material is derived from nearby soils mixed, but dominantly granitic or granitic origin. In some areas, the soils are underlain by consolidated sediments.

Groundwater

The City of Citrus Heights General Plan Planning Area overlies the North American groundwater subbasin. The North American groundwater subbasin (California Department of Water Resources [DWR] Basin Number 5-21.64) lies in the eastern central part of the Sacramento Valley groundwater basin. Citrus Heights is located on the Turlock Lake Formation, which is also referred to as the Fair Oaks (geologic) Formation in the Sacramento Groundwater Authority (SGA) region[1]. The Fair Oaks Formation is composed of relatively thick deposits of silt and clay with thinner deposits of sand and gravel. The Fair Oaks Formation can yield moderate to high quantities of water. Wells greater than 300 feet deep may encounter the underlying Mehrten Formation, which results in water yields roughly equivalent to the Fair Oaks Formation. Groundwater in the vicinity of the City generally flows to the west and ranges in depth from approximately 80 feet above mean sea level in the east to 20 feet below mean sea level in the west (SGA, December 2014).

The Specific Plan Area is located in the eastern portion of the Sacramento Groundwater Authority region. The SGA Basin Management Report – 2016 Update identifies the groundwater elevations in spring of 2016 for the SGA jurisdiction, which shows groundwater levels in the general vicinity of the Project range between 70 and 100 feet above mean surface level[2]. Given that this region relies primarily on surface water, the long-term hydrographs for the wells in the eastern region indicate that groundwater elevations have not varied greatly over time. Based on the areas underlying geology, the Specific Plan Area's elevation, groundwater measurements, and review of available historical water levels, it is unlikely that perched groundwater resulting from rainfall, surface run-off, or seepage would be encountered during site excavations.

FAULTS AND SEISMICITY

Faults

A fault is a fracture in the crust of the earth along which rocks on one side have moved relative to those on the other side. A fault trace is the line on the earth's surface defining the fault. Displacement of the earth's crust along faults releases energy in the form of earthquakes and in some cases in fault creep. Most faults are the result of repeated displacements over a long period of time.

Surface rupture occurs when movement on a fault deep within the earth breaks through to the surface. Surface ruptures have been known to extend up to 50 miles with displacements of an inch to 20 feet. Fault rupture almost always follows preexisting faults, which are zones of weakness. Rupture may occur suddenly during an earthquake or slowly in the form of fault creep. Sudden displacements are more damaging to structures because they are accompanied by shaking.

The State of California designates faults as active, potentially active, and inactive depending on how recent the movement that can be substantiated for a fault. Table 3.4-2 presents the California fault activity rating system.

[1] SGA. Sacramento County – North Basin Groundwater Management Plan. December 2014.

[2] SGA. SGA Basin Management Report – 2016 Update [Figure 13, pg.26]. January 2016.

TABLE 3.4-2: FAULT ACTIVITY RATING

FAULT ACTIVITY RATING	*GEOLOGIC PERIOD OF LAST RUPTURE*	*TIME INTERVAL*
Active (A)	Holocene	Within last 11,700 Years
Potentially Active (PA)	Quaternary	Age Undifferentiated
Inactive (I)	Pre-Quaternary	Greater than 1.6 Million Years

SOURCE: CALIFORNIA DEPARTMENT OF CONSERVATION, FAULT ACTIVITY MAP OF CALIFORNIA (2010).

No known faults traverse through the Citrus Heights Planning Area. However, the site does lie within a seismically active region, as California has numerous faults that are considered active. Generally, a fault is considered active if it has ruptured within the Holocene epoch (11,700 years before present). Mapped, potentially active Quaternary faults within the vicinity of the Specific Plan Area are located within the Foothill Fault System approximately 16 miles to the northeast. Figure 3.4-2 shows faults within the general vicinity of the Project area.

Seismicity

The amount of energy available to a fault is determined by considering the slip-rate of the fault, its area (fault length multiplied by down-dip width), maximum magnitude, and the rigidity of the displaced rocks. These factors are combined to calculate the moment (energy) release on a fault. The total seismic energy release for a fault source is sometimes partitioned between two different recurrence models, the characteristic and truncated Gutenberg-Richter (G-R) magnitude-frequency distributions. These models incorporate our knowledge of the range of magnitudes and relative frequency of different magnitudes for a particular fault. The partition of moment and the weights for multiple models are given in the following summary.

Earthquakes are generally expressed in terms of intensity and magnitude. Intensity is based on the observed effects of ground shaking on people, buildings, and natural features. By comparison, magnitude is based on the amplitude of the earthquake waves recorded on instruments, which have a common calibration. The Richter scale, a logarithmic scale ranging from 0.1 to 9.0, with 9.0 being the strongest, measures the magnitude of an earthquake relative to ground shaking. Table 3.4-3 provides a description and a comparison of intensity and magnitude.

According to the City's General Plan, the 2009 International Building Code identifies the City as located in Seismic Activity Intensity Zone III, which is consistent with the 2018 United States Geological Survey National Seismic Hazard Map. The California Building Standards Code (CBSC) places all of California in the zone of greatest earthquake severity because recent studies indicate high potential for severe ground shaking. It should be noted that no significant seismic event has been recorded in the area since 1908, when an earthquake estimated at greater than 4.0 on the Richter Scale occurred on an unnamed fault in southwestern Placer County.

TABLE 3.4-3: MODIFIED MERCALLI INTENSITY SCALE FOR EARTHQUAKES

RICHTER MAGNITUDE	*MODIFIED MERCALLI SCALE*	*EFFECTS OF INTENSITY*
0.1 – 0.9	I	Earthquake shaking not felt.
1.0 – 2.9	II	Shaking felt by those at rest.
3.0 – 3.9	III	Felt by most people indoors, some can estimate duration of shaking.
4.0 – 4.5	IV	Felt by most people indoors. Hanging objects rattle, wooden walls and frames creak.
4.6 – 4.9	V	Felt by everyone indoors, the duration of shaking can be estimated by most people. Standing autos rock. Crockery clashes, dishes rattle and glasses clink. Doors open, close and swing.
5.0 – 5.5	VI	Felt by all who estimate duration of shaking. Sleepers awaken, liquids spill, objects are displaced, and weak materials crack.
5.6 – 6.4	VII	People frightened and walls unsteady. Pictures and books thrown, dishes and glass are broken. Weak chimneys break. Plaster, loose bricks and parapets fall.
6.5 – 6.9	VIII	Difficult to stand. Waves on ponds, cohesionless soils slump. Stucco and masonry walls fall. Chimneys, stacks, towers, and elevated tanks twist and fall.
7.0 – 7.4	IX	General fright as people are thrown down, hard to drive. Trees broken, damage to foundations and frames. Reservoirs damaged, underground pipes broken.
7.5 – 7.9	X	General panic. Ground cracks, masonry and frame buildings destroyed. Bridges destroyed, railroads bent slightly. Dams, dikes and embankments damaged.
8.0 – 8.4	XI	Large landslides, water thrown, general destruction of buildings. Pipelines destroyed, railroads bent.
8.5 +	XII	Total nearby damage, rock masses displaced. Lines of sight/level distorted. Objects thrown into air.

SOURCE: UNITED STATES GEOLOGICAL SURVEY.

Alquist-Priolo Special Study Zone

The California legislature passed the Alquist-Priolo Special Studies Zone Act in 1972 to address seismic hazards associated with faults and to establish criteria for developments for areas with identified seismic hazard zones. The California Geologic Survey (CGS) evaluates faults with available geologic and seismologic data and determines if a fault should be zoned as active, potentially active, or inactive. If CGS determines a fault to be active, then it is typically incorporated into a Special Studies Zone in accordance with the Alquist-Priolo Earthquake Hazard Act. Alquist-Priolo Special Study Zones are usually one-quarter mile or less in width and require site-specific evaluation of fault location and require a structure setback if the fault is found traversing a Specific Plan Area. The Specific Plan Area is not within an Alquist-Priolo Special Study Zone.

SEISMIC HAZARDS

Seismic Ground Shaking

The potential for seismic ground shaking is expected in California. As a result of the foreseeable seismicity in California, the State requires special design considerations for all structural

improvements in accordance with the seismic design provisions in the California Building Code. These seismic design provisions require enhanced structural integrity based on several risk parameters. Seismic ground shaking on the Specific Plan Area is expected during the life of the Project.

Fault Rupture

A fault rupture occurs when the surface of the earth breaks as a result of an earthquake, although this does not happen with all earthquakes. These ruptures generally occur in a weak area of an existing fault. Ruptures can be sudden (i.e. earthquake) or slow (i.e. fault creep). The Alquist-Priolo Fault Zoning Act requires active earthquake fault zones to be mapped and it provides special development considerations within these zones. As stated, the Specific Plan Area does not have surface expression of active faults and is not located within an Alquist-Priolo Fault Zone.

Liquefaction

Liquefaction typically requires a significant sudden decrease of shearing resistance in cohesionless soils and a sudden increase in water pressure, which is typically associated with an earthquake of high magnitude. According to the Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan EIR, the Citrus Heights Planning Area is not identified as having liquefication potential.

The potential for liquefaction is highest when groundwater levels are high, and loose, fine, sandy soils occur at depths of less than 50 feet. Based on a review of geologic maps and Natural Resources Conservation Service (NRCS) soil data, it is unlikely that soils on the Specific Plan Area would be subject to liquefaction in the event of an earthquake because the Specific Plan Area is underlain by relatively stable Pleistocene-age soils, and the potential seismic sources are a relatively long distance away. Additionally, the groundwater elevations in the Plan Area vicinity is between 70 to 100 feet above msl while the elevation of the Plan Area is between 170 to 180 feet above msl; therefore, the groundwater table in the Specific Plan Area is anticipated to be approximately 70 to 110 feet below the existing grade of the Plan Area. According to Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan EIR, the depth to the water table coupled with the underlying geological materials within Citrus Heights does not support high liquefication potential.

Lateral Spreading

Lateral spreading typically results when ground shaking moves soil toward an area where the soil integrity is weak or unsupported, and it typically occurs on the surface of a slope, although it does not occur strictly on steep slopes. Oftentimes, lateral spreading is directly associated with areas of liquefaction. Areas in the region that are susceptible to this hazard are located along creeks or open water bodies, or within the foothills to the west. According to the City's General Plan Draft EIR, the potential for lateral spreading throughout the General Plan Planning Area to occur during or after seismic events is considered to be low due to the distance of active faults.

Landslides

Landslides include rockfalls, deep slope failure, and shallow slope failure. Factors such as the geological conditions, drainage, slope, vegetation, and others directly affect the potential for landslides. One of the most common causes of landslides is construction activity that is associated with road building (i.e. cut and fill). The potential for landslides is considered remote in the Sacramento Valley floors due to the lack of significant slopes. Additionally, the Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan EIR identifies the Citrus Heights Planning Area as having no risk of landslide based on the flat topography of the City and lack of slopes steeper than 15 percent. For this reason, the probability of landslides occurring on the Specific Plan Area is low.

The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 180 feet above mean sea level (MSL).

NON-SEISMIC HAZARDS

Expansive Soils

Expansive soils can undergo significant volume change with changes in moisture content. They shrink and harden when dried and expand and soften when wet. If structures are underlain by expansive soils, it is important that foundation systems be capable of tolerating or resisting any potentially damaging soil movements. In addition, it is important to limit moisture changes in the surficial soils by using positive drainage away from buildings as well as limiting landscaping watering. As shown in Figure 3.4-3, the expansive potential of the Plan Area soils has not been evaluated due to approximately 99 percent of the soils on-site being identified as Urban Land. According to the City's General Plan Draft EIR, the Urban Land soil type is for large areas covered by impervious surfaces resulting in areas so altered or obstructed by urban works or structures that the identification of soils is infeasible.

Erosion

Erosion naturally occurs on the surface of the earth as surface materials (i.e. rock, soil, debris, etc.) is loosened, dissolved, or worn away, and transported from one place to another by gravity. Two common types of soil erosion include wind erosion and water erosion. The steepness of a slope is an important factor that affects soil erosion. Erosion potential in soils is influenced primarily by loose soil texture and steep slopes. Loose soils can be eroded by water or wind forces, whereas soils with high clay content are generally susceptible only to water erosion. The potential for erosion generally increases as a result of human activity, primarily through the development of facilities and impervious surfaces and the removal of vegetative cover. According to the City's General Plan Draft EIR, the erosion potential for the Project area has not been evaluated because the Plan Area is covered by impervious surfaces resulting in areas so altered or obstructed by urban works or structures. However, overall, the City's Planning Area is indicated to have a slight to moderate erosion risk.

Subsidence

Land subsidence is the gradual settling or sinking of an area with little or no horizontal motion due to changes taking place underground. It is a natural process, although it can also occur (and is greatly accelerated) as a result of human activities. Common causes of land subsidence from human activity include: pumping water, oil, and gas from underground reservoirs; dissolution of limestone aquifers (sinkholes); collapse of underground mines; drainage of organic soils; and initial wetting of dry soils. Sacramento County is affected by five causes of land subsidence: 1) compaction of unconsolidated soils from earthquakes; 2) compaction by heavy structures; 3) erosion of peat soils; 4) peat oxidation; and 5) groundwater withdrawal. Minor land subsidence was observed and recorded in the County between 1912 and the mid-1960s for all groundwater basins underlying the County. However, subsidence did not exceed 0.40-feet during this time frame. According to the City's General Plan EIR, the likeliness of subsidence in the City's Planning Area is considered low.

PALEONTOLOGICAL RESOURCES

Citrus Heights consists of geologic units (i.e., the Riverbank and Turlock Lake formations) which have been found to contain fossils (including fossils of vertebrate animals ranging from rodents and lizards to mammoths) in other areas of the Central Valley (City of Citrus Heights, July 2011).

Turlock Lake Formation Paleontological Resources Inventory

According to the Citrus Heights General Plan Update EIR, the Specific Plan is underlain by the Turlock Lake Formation, which has yielded thousands of Pleistocene-age specimens from 35 specimens from 35 species, including mammoth, ground sloth, bear sabertooth cat, wolf, deer, camel, horse, antelope, rodents, birds, reptiles, and plants. In the regional vicinity, fossilized fish specimens, plant fragments, petrified wood, and ichnofossils were reported in the sediments of the Turlock Formation near Roseville (Citrus Heights, July 2011).

Therefore, the widespread occurrence of Pleistocene vertebrate fossil remains in sediments referable to the Turlock Lake Formation suggests there is potential for uncovering additional similar fossil remains during construction-related earth-moving activities within the Specific Plan Area.

3.4.2 REGULATORY SETTING

FEDERAL

Uniform Building Code (UBC)

The purpose of the Uniform Building Code (UBC) is to provide minimum standards to preserve the public peace, health, and safety by regulating the design, construction, quality of materials, certain equipment, location, grading, use, occupancy, and maintenance of all buildings and structures. UBC standards address foundation design, shear wall strength, and other structurally related conditions.

STATE

The State of California has established a variety of regulations and requirements related to seismic safety and structural integrity, including the California Building Code, the Alquist-Priolo Earthquake Fault Zoning Act and the Seismic Hazards Mapping Act.

California Building Standards Code

The CBSC is included in Title 24 of the California Code of Regulations (CCR) and includes the California Building Code. Under state law, all building standards must be centralized in Title 24 or they are not enforceable.

The CBSC is a compilation of three types of building criteria from three different origins:

- Building standards that have been adopted by state agencies without change from building standards contained in national model codes;
- Building standards that have been adopted and adapted from the national model code standards to meet California conditions; and
- Building standards, authorized by the California legislature, that constitute extensive additions not covered by the model codes that have been adopted to address particular California concerns.

Through the CBSC, the state provides a minimum standard for building design and construction. The CBSC contains specific requirements for seismic safety, excavation, foundations, retaining walls, and site demolition. It also regulates grading activities, including drainage and erosion control.

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act of 1972 sets forth the policies and criteria of the State Mining and Geology Board, which governs the exercise of governments' responsibilities to prohibit the location of developments and structures for human occupancy across the trace of active faults. The policies and criteria are limited to potential hazards resulting from surface faulting or fault creep within Earthquake Fault Zones, as delineated on maps officially issued by the State Geologist. Working definitions include:

- Fault – a fracture or zone of closely associated fractures along which rocks on one side have been displaced with respect to those on the other side;
- Fault Zone – a zone of related faults, which commonly are braided and sub parallel, but may be branching and divergent. A fault zone has a significant width (with respect to the scale at which the fault is being considered, portrayed, or investigated), ranging from a few feet to several miles;
- Sufficiently Active Fault – a fault that has evidence of Holocene surface displacement along one or more of its segments or branches (last 11,000 years); and
- Well-Defined Fault – a fault whose trace is clearly detectable by a trained geologist as a physical feature at or just below the ground surface. The geologist should be able to locate

the fault in the field with sufficient precision and confidence to indicate that the required site-specific investigations would meet with some success.

"Sufficiently Active" and "Well Defined" are the two criteria used by the State to determine if a fault should be zoned under the Alquist-Priolo Act.

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act, passed in 1990, addresses non-surface fault rupture earthquake hazards, including liquefaction and seismically-induced landslides. Under the Act, seismic hazard zones are to be mapped by the State Geologist to assist local governments in land use planning. The program and actions mandated by the Seismic Hazards Mapping Act closely resemble those of the Alquist-Priolo Earthquake Fault Zoning Act (which addresses only surface fault-rupture hazards) and are outlined below:

The State Geologist is required to delineate the various "seismic hazard zones."

- Cities and Counties, or other local permitting authority, must regulate certain development "projects" within the zones. They must withhold the development permits for a site within a zone until the geologic and soil conditions of the site are investigated and appropriate mitigation measures, if any, are incorporated into development plans.
- The State Mining and Geology Board provides additional regulations, policies, and criteria, to guide cities and counties in their implementation of the law. The Board also provides guidelines for preparation of the Seismic Hazard Zone Maps and for evaluating and mitigating seismic hazards.
- Sellers (and their agents) of real property within a mapped hazard zone must disclose that the property lies within such a zone at the time of sale.

National Pollutant Discharge Elimination System (NPDES)

National Pollutant Discharge Elimination System (NPDES) permits are required for discharges of pollutants to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, the ocean, dry stream beds, wetlands, and storm sewers that are tributary to any surface water body. NPDES permits are issued under the Federal Clean Water Act, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.)

The Regional Water Quality Control Board (RWQCB) issues these permits in lieu of direct issuance by the Environmental Protection Agency, subject to review and approval by the Environmental Protection Agency Regional Administrator. The terms of these NPDES permits implement pertinent provisions of the Federal Clean Water Act and the Act's implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti- degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the Clean Water Act's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also Waste Discharge Requirements issued under the authority of the California Water Code.

These NPDES permits regulate discharges from publicly owned treatment works, industrial discharges, stormwater runoff, dewatering operations, and groundwater cleanup discharges. NPDES permits are issued for five years or less, and are therefore to be updated regularly. The rapid and dramatic population and urban growth in the Central Valley Region has caused a significant increase in NPDES permit applications for new waste discharges. To expedite the permit issuance process, the RWQCB has adopted several general NPDES permits, each of which regulates numerous discharges of similar types of wastes. The California State Water Resources Control Board (SWRCB) issues general permits for stormwater runoff from construction sites statewide. Stormwater discharges from industrial and construction activities in the Central Valley Region can be covered under these general permits, which are administered jointly by the SWRCB and RWQCB.

In accordance with the NPDES General Construction Permit requirements, a Storm Water Pollution Prevention Plan (SWPPP) is required for projects that disturb at least one acre of soil. The SWPPP must be submitted to the RWQCB.

Water Quality Control Plan for the Central Valley Region

The Water Quality Control Plan for the Central Valley Region (Basin Plan) includes a summary of beneficial water uses, water quality objectives needed to protect the identified beneficial uses, and implementation measures. The Basin Plan establishes water quality standards for all the ground and surface waters of the region. The term "water quality standards," as used in the Federal Clean Water Act, includes both the beneficial uses of specific water bodies and the levels of quality that must be met and maintained to protect those uses. The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards.

The RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under a number of programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes, where they are known. For water bodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included. The Basin Plan reflects, incorporates, and implements applicable portions of a number of national and statewide water quality plans and policies, including the California Water Code and the Clean Water Act.

LOCAL

Citrus Heights General Plan

The Citrus Heights General Plan contains the following goal and policies that are relevant to geotechnical aspects of the proposed Specific Plan:

COMMUNITY HEALTH ELEMENT

Goal 50: Protect life and property from risks associated with seismic activities.

Policy 50.1: Implement the California Building Code to comply with federal and State earthquake protection and slope stability standards for new development.

Policy 50.2: Require soils reports for new development to identify the potential for liquefication, expansive soils, ground settlement, and slope failure. Require reports to contain remedial measures that could be feasibly implemented to minimize potential impacts.

City of Citrus Heights Municipal Code

Chapter 18 of the Municipal Code, Building Code, provides minimum standards to safeguard life or limb, health, property, and public welfare by regulating and controlling the design, construction, installation, quality of materials, use and occupancy, location and maintenance of all buildings and structures within this jurisdiction, and certain equipment. Section 18-27 of this chapter adopts the 2019 California Building Code.

Article 12, Land Grading and Erosion Control, of Chapter 18 establishes administrative procedures, a minimum standard of review, and implementation and enforcement procedures for controlling erosion, sedimentation, and other pollutant runoff from new development projects. The ordinance also addresses grading, filling, land excavation, construction activities, and drainage as they relate to a particular project. The ordinance requires any development project resulting in the excavation of 50 cubic yards of soil or more to obtain a grading and erosion control permit. Grading and erosion control permits, and amendments thereto, are subject to the requirements of the California Environmental Quality Act (CEQA) if they have not been addressed in a previous environmental document. Individual project applicants are required to furnish a copy of the permit application to the City for review and approval. The City reviews all grading and erosion control permits and geotechnical studies and reports in accordance with the Ordinance to ensure geologic and soil stability have been properly addressed.

3.4.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed Specific Plan will have a significant impact on geology and soils if it will:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
    - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42;
    - Strong seismic ground shaking;

  - Seismic-related ground failure, including liquefaction;
  - Landslides;
- Result in substantial soil erosion or the loss of topsoil;
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property; and/or
- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

IMPACTS AND MITIGATION MEASURES

Impact 3.4-1: Specific Plan implementation would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, strong seismic ground shaking, seismic related ground failure, or landslides (Less than Significant)

The Specific Plan Area is currently developed with the Sunrise Mall and associated parking areas, which has been a major commercial and social center of Citrus Heights since its opening in 1972. To date, no strong seismic event has occurred resulting in structural damage to the mall or the injury or death of persons due to ground rupture, strong ground shaking, liquefication, or landslides. Further, no significant seismic event has been recorded in the area since 1908. The following describes the potential for the loss, injury, or death due to ground rupture, strong ground shaking, liquefication, or landslides

GROUND RUPTURE

According to the California Earthquake Hazards Zone Application, the Specific Plan Area is not within an Alquist-Priolo Special Study Zone. Additionally, there are no known faults (active, potentially active, or inactive) that traverse through the City. The principal fault zones nearest the Specific Plan Area are the Melones Fault Zone and the Bear Mountain Fault Zone, both of which are part of the Foothills Fault System.[3] The Foothill Fault system is located near Folsom Lake, and not within the boundaries of the City of Citrus Heights. Therefore, because no faults are located on the Specific Plan Area, the potential for ground rupture (cracking or breaking of the ground during an earthquake) would be less than significant.

GROUND SHAKING

According to the City's General Plan, the City of Citrus Heights is located in an area of low seismic activity. As mentioned above, no significant seismic event has been recorded in the area since 1908, when an earthquake estimated at greater than 4.0 on the Richter Scale occurred on an

[3] *Placer County Local-Hazard Mitigation Plan* (Placer County, March 2016).

unnamed fault in southwestern Placer County. The Foothill Fault System has been identified in previous studies as potentially posing a seismic hazard to the area, including ground shaking, and seismic ground failure. Additionally, there will always be a potential for groundshaking caused by seismic activity anywhere in California, including the Specific Plan Area. Therefore, this is a potentially significant impact.

To reduce the impact of seismic ground shaking, developments under the Specific Plan would be required to be constructed using standard engineering and seismic safety design techniques of the California Building Code. Seismic design provisions of current building codes generally prescribe minimum lateral forces, applied statically to the structure, combined with the gravity forces of dead-and-live loads. The code-prescribed lateral forces are generally considered to be substantially smaller than the comparable forces that would be associated with a major earthquake. Therefore, structures would be able to: (1) resist minor earthquakes without damage, (2) resist moderate earthquakes without structural damage but with some nonstructural damage, and (3) resist major earthquakes without collapse but with some structural as well as nonstructural damage.

In addition, consistent with Policy 50.2 of the City's General Plan, geotechnical investigations would be required for future developments considered for approval under the proposed Specific Plan to minimize hazards related to ground shaking. The geotechnical investigation would include site-specific assessments of the potential for ground shaking, and would provide needed recommendations, such as foundation and structural design, to minimize any potential hazards associated with site-specific geological conditions.

LIQUEFICATION

Soil liquefaction results from loss of strength during cyclic loading, such as imposed by earthquakes. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded, fine-grained sands. As stated, it is unlikely that soils on the Specific Plan Area would be subject to liquefaction in the event of an earthquake because the Specific Plan Area is underlain by relatively stable Pleistocene-age soils, and the potential seismic sources are a relatively long distance away. Additionally, the City's General Plan EIR notes Citrus Heights planning area was not identified as having liquefication potential and groundwater was found to be greater than 70 feet below existing site grade adjacent to the Specific Plan Area. For these reasons, the probability of liquefaction causing substantial adverse effects on people or structures is unlikely.

Future developments proposed under the Specific Plan would be required to obtain a site-specific geotechnical investigation to identify the potential for liquefication, expansive soils, ground settlement, and slope failure. Each geotechnical investigation would provide needed seismic design and construction recommendations, such as for foundation/structural building design and/or remedial grading, to minimize geological hazards, including liquefaction, which may be present at the site.

LANDSLIDES

According to the CGS Information Warehouse: Regulatory Maps, the Plan Area is not located within an area identified as having the potential for landslides. Additionally, the Specific Plan area

generally consists of gentle slopes, ranging from approximately 170 feet to 180 feet above mean sea level (MSL). The Specific Plan and surrounding area do not contain any significant landforms with the potential to experience landslides. As a result, the probability of landslides causing substantial adverse effects on people or structures within the Specific Plan Area is less than significant.

CONCLUSION

Although the City of Citrus Heights is located in an area of low seismic activity, Citrus Heights, as with virtually all sites within the State of California, is subject to minor ground shaking and potentially secondary hazards. Consistent with Policy 50.2 of the City's General Plan, geotechnical investigations would be required for projects considered for approval under the proposed Specific Plan to identify site-specific geotechnical conditions. Developments built under the proposed Specific Plan would be designed and built conforming to CBC seismic safety standards, which are based on factors such as occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability at the site. Further, the site-specific geotechnical investigations would estimate seismic design parameters for the proposed development based on site-specific geologic and soil conditions and the types of building occupancies proposed, and would provide recommendations regarding the design and construction of the specific development being proposed for construction. Therefore, buildout of the proposed Specific Plan would not subject people and structures to hazards from seismic-related ground shaking and ground failure, including liquefaction, and impacts would be ***less than significant.***

Impact 3.4-2: Construction and implementation of projects under the Specific Plan has the potential to result in substantial soil erosion or the loss of topsoil (Less than Significant with Mitigation)

Construction of projects identified under the proposed Specific Plan would increase the potential for soil erosion on-site through the disturbance and exposure of soils within the site. Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas.

Developments built out under the Specific Plan would be subject to the provisions of the City's Land Grading and Erosion Control Ordinance (Chapter 18, Article 12 of the Citrus Heights Municipal Code). The purpose of this Ordinance includes the regulation of grading activity on all property within the City of Citrus Heights. This Article establishes rules and regulations to control grading and erosion control activities, including fills and embankments; establishes the administrative procedure for issuance of permits; and provides for approval of plans and inspection of grading construction and erosion control plans for all graded sites.

Additionally, Mitigation Measure 3.4-1 requires an approved SWPPP that includes best management practices for grading and preservation of topsoil for all developments within the proposed Specific Plan Area. The SWPPP would be designed to control storm water quality

degradation to the extent practicable using best management practices during and after construction. Future project applicants would submit the SWPPP with a Notice of Intent to the RWQCB to obtain a General Permit. The RWQCB is an agency responsible for reviewing the SWPPP with the Notice of Intent, prior to issuance of a General Permit for the discharge of storm water during construction activities.

There is the potential for erosion associated with stormwater runoff to occur after construction activities and during the operational phase of the Specific Plan Area. Future developments under the Specific Plan would be required to incorporate design measures that treat stormwater runoff in accordance with the standards of the California Stormwater Best Management Practice New Development and Redevelopment Handbook and Section E.12 of the Phase II Small MS4 General Permit. This includes the drainage design from all paved surfaces, including streets, parking lots, driveways, and roofs, as well as landscaping.

The California Stormwater Best Management Practice New Development and Redevelopment Handbook addresses potential water quality impacts from completed development that can include the following:

- Urban activities can result in the generation of new dry-weather runoff that may contain many of the following pollutants: sediment, nutrients, bacteria and viruses, oil and grease, metals, organics, pesticides, and trash;
- Impervious surfaces associated with development, such as streets, rooftops, and parking lots, prevent runoff infiltration and increase the rate and volume of stormwater runoff that may increase downstream erosion potential and associated potential water quality impairment;
- Urban activities and increased impervious surfaces which can increase the concentration and/or total load of many of the pollutants listed above in wet weather stormwater runoff.

Practices that reduce erosion and help retain water on-site include incorporating organic amendments into disturbed soils after construction, retaining native vegetation, covering soil during revegetation, providing street trees, drainage basin maintenance, and more. Compliance with the California Stormwater Best Management Practice New Development and Redevelopment Handbook would ensure that the storm drain system does not increase flooding and erosion potential.

As noted in the Sunrise Tomorrow Specific Plan, the Sunrise Mall was built as a mound-type site, with gradual slopes draining away from the existing buildings (center of the site), towards the site perimeter. Implementation of the Specific Plan would result in the redevelopment of the on-site storm drain system to improve on-site drainage and implement Low Impact Development (LID) techniques for stormwater management. The revised storm drain system includes new lateral connections not only for new building rainwater, but also for additional drain inlets, area drains, and manholes. Additionally, as part of the potential creek restoration, the Specific Plan may include reconstruction of an existing dual box culvert at the southwest corner of the site that carries local drainage into Arcade Creek. If this optional creek restoration component does not occur, the culvert would remain underground.

Future development within the Specific Plan area would be required to employ LID methods, where feasible, to capture and treat surface runoff pollution at its source, consistent with Section 7.4.2 of the Specific Plan. As noted in Section 3.6.2 of the Specific Plan, open spaces, sidewalks, and multi-use trails shall incorporate bioretention rain gardens to capture and treat stormwater runoff and rehabilitate ground water supplies on site, as feasible based on the slope and grade. On-site treatment is intended to catch and filter/reduce pollutants to minimize what enters the public system, using natural features designed to treat urban runoff. LID techniques would be incorporated into public realm streetscape and natural or common open spaces within the Specific Plan area and community. For example, LID designs could be constructed as drainage courses within landscaped greenways and buffers, drainage swales in parking medians or planter strips, planter boxes and vegetated curb extensions, or even as demonstration or infiltration gardens that could enhance both the civic and recreational quality of the Sunrise Mall area. According to the Specific Plan, there is over 1,000 linear feet for a very wide proposed landscape/planter area strip (possible embankment in some areas) to be installed as part of the Specific Plan along most of the southern border leg of the site. Overall, compliance with the Specific Plan would result in an improved storm water system on-site to ensure buildout does not result in increased flooding and erosion potential. Additionally, the development standards found within the Specific Plan would further ensure that the collected stormwater runoff is properly treated on-site consistent with water quality standards.

With the implementation of the following mitigation measure, the Specific Plan would have a ***less than significant*** impact relative to this topic.

MITIGATION MEASURE(S)

Mitigation Measure 3.4-1: *Prior to any site disturbance, the Project proponents for developments within the Specific Plan Area shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the RWQCB in accordance with the NPDES General Construction Permit requirements. The SWPPP shall be designed to control pollutant discharges utilizing Best Management Practices (BMPs) and technology to reduce erosion and sediments. BMPs may consist of a wide variety of measures taken to reduce pollutants in stormwater runoff from the Specific Plan Area. Measures shall include temporary erosion control measures (such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover) that will be employed to control erosion from disturbed areas. Final selection of BMPs will be subject to approval by the City of Citrus Heights and the RWQCB. The SWPPP will be kept on site during construction activity and will be made available upon request to representatives of the RWQCB.*

Impact 3.4-3: The Specific Plan would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of Specific Plan implementation, and would not result in landslide, lateral spreading, subsidence, liquefaction or collapse (Less than Significant)

LIQUEFICATION AND LANDSLIDES

As discussed in Impact 3.6-1, the Specific Plan Area, like most of the Sacramento Valley, consist of gentle slopes and does not contain any soil types or geologic characteristics that make the area susceptible to the potential for landslides or liquefication. Therefore, the probability of a landslide or liquefication on the Project site is low.

LATERAL SPREADING

Lateral spreading typically occurs on the surface of a slope and is oftentimes directly associated with areas of liquefaction. As stated, the Specific Plan Area is relatively flat and there are no slopes on-site or within the surrounding area. Further, the Specific Plan Area is not located within an area identified as having the potential for liquefaction. According to the City's General Plan Draft EIR, the potential for lateral spreading throughout the General Plan Planning Area to occur during or after seismic events is considered to be low due to the flat topography of the planning area.

SUBSIDENCE

The Specific Plan Area is currently developed with the Sunrise Mall and associated parking areas, resulting in the majority of the Specific Plan Area being paved or developed with structures. Although subsidence has not been identified on the Specific Plan Area, future developments proposed under the Specific Plan would be required to obtain a site-specific geotechnical investigation, as required by City's General Plan. Standard engineering practices or site-specific recommendations provided in the geotechnical investigations would be imposed on the development project to ensure soil stability.

COLLAPSE

Collapse or soil collapse occurs when any unsaturated soils go through a radical rearrangement of particles and greatly decreases in volume upon wetting, additional loading, or both. Collapse can occur either by increasing the stress above the soil strength or by lowering soil strength below the stress. Soil deposits most likely to collapse are loose fills, altered windblown sands, hillwash or alluvial fans of low unit weight, and decomposed granite or acidic igneous rocks[4]. As previously stated, the Specific Plan Area is underlain by relatively stable Pleistocene-age soils. Additionally, the Citrus Heights General Plan EIR concluded that collapse is not expected from buildout of the General Plan and implementation of the CBC would ensure that future developments would not be subject to impacts from unstable soils (Citrus Heights, July 2011). Consistent with the General Plan EIR, future developments proposed under the Specific Plan would be required to obtain a site-

[4] United States Department of the interior. *Characteristics and Problems of Collapsible Soils [pgs. 1-3]*. February 1992.

specific geotechnical investigation, as required by City's General Plan. Standard engineering practices or site-specific recommendations provided in the geotechnical investigations would be imposed on the development project to ensure soil stability.

CONCLUSION

The Specific Plan Area is not located within an area that is considered unstable or that would become unstable and potentially result in landslide, lateral spreading, subsidence, liquefaction or collapse. Consistent with Policy 50.2 of the City's General Plan, geotechnical investigations would be required for projects considered for approval under the proposed Specific Plan to identify site-specific geotechnical conditions and provide recommendations to mitigate any potential on-site geological hazards. Developments built under the proposed Plan would be designed and built conforming to CBC seismic safety standards, which are based on factors such as occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability at the site. Standard engineering practices or site-specific recommendations provided in a geotechnical report would be used to engineer soil stability and ensure buildout of the Specific Plan would not result in geological hazards. Therefore, implementation of CBC seismic safety standards and policies of the City's General Plan, including the application of best management practices and engineering controls, would reduce potential impacts associated with unstable soils or soils that would become unstable with implementation of the proposed Specific Plan. Impacts relative to this topic would be ***less than significant.***

Impact 3.4-4: Buildout of the Specific Plan would not create substantial risks to life or property arising from expansive soils (Less than Significant)

Expansive soils are those that undergo volume changes as moisture content fluctuates; swelling substantially when wet or shrinking when dry. Soil expansion can damage structures by cracking foundations, causing settlement and distorting structural elements. Expansion is a typical characteristic of clay-type soils. Expansive soils shrink and swell in volume during changes in moisture content, such as a result of seasonal rain events, and can cause damage to foundations, concrete slabs, roadway improvements, and pavement sections.

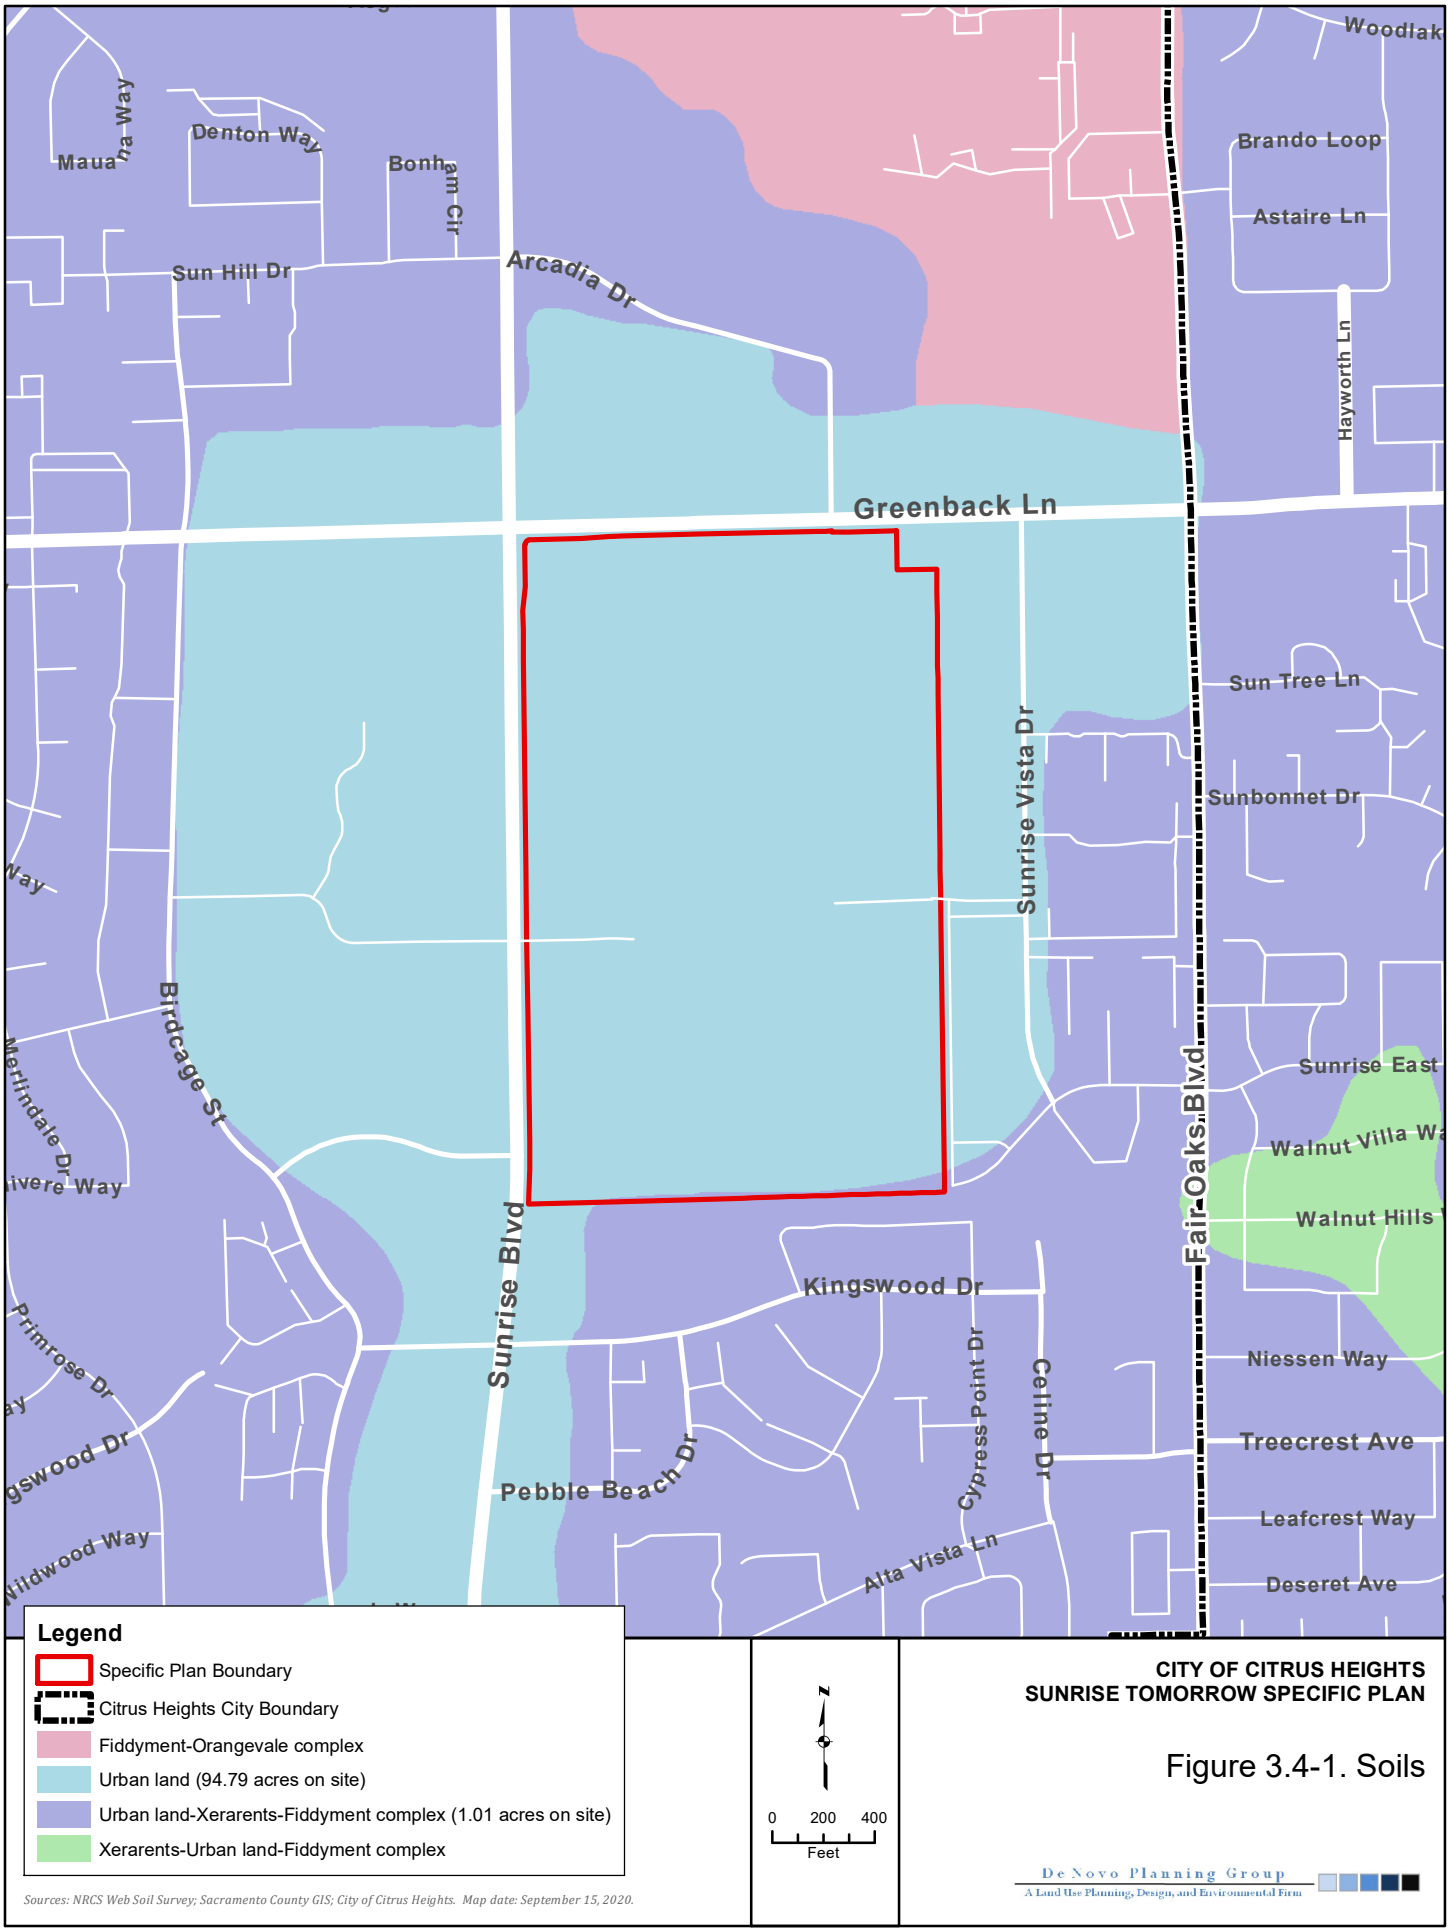
According to the General Plan EIR, urban soils within the City have a shrink-swell potential that ranges from low to high. Shrink-swell potential varies from site to site within the urban soils as the soil profiles have been previously disturbed by past construction activity. The Specific Plan Area is characterized by having urban soils, as the site is developed and impervious surfaces cover a majority of the site. Therefore, development under the proposed Specific Plan could potentially expose people or structures to hazards arising from expansive soils.

Consistent with Policy 50.2 of the City's General Plan, geotechnical investigations would be required for projects considered for approval under the proposed Specific Plan to evaluate whether site soils are suitable for supporting the proposed structures. Developments built under the proposed Plan would be designed and built conforming to CBC seismic safety standards, which are based on factors such as occupancy type, the types of soil and rock on-site, and the strength of

ground motion with a specified probability at the site. Site-specific geotechnical studies would evaluate whether site soils are suitable for supporting the proposed structures and would provide recommendations for minimizing any identified hazards related to potential expansive soils. Each project applicant would be required to comply with the recommendations of the applicable geotechnical investigation report. Therefore, buildout of the proposed Specific Plan would not create substantial risks to life or property arising from expansive soils, and impacts would be ***less than significant.***

Impact 3.4-5: Buildout of the Specific Plan has the potential to directly or indirectly destroy a unique geological feature or paleontological resource (Less than Significant with Mitigation)

The Specific Plan Area is currently developed with the Sunrise Mall and associated parking areas, resulting in the majority of the Specific Plan Area having being heavily disturbed during prior construction activities. Therefore, the Specific Plan Area is not expected to contain subsurface paleontological resources or unique geological features on-site; however, it is possible that undiscovered paleontological resources could be encountered during ground-disturbing activities from buildout of the Specific Plan Area.



Damage to or destruction of a paleontological resource would be considered a potentially significant impact under local, state, or federal criteria. Implementation of Mitigation Measure 3.4-2 would ensure steps would be taken to reduce impacts to paleontological resources in the event that they are discovered during construction, including stopping work in the event potential resources are found, evaluation of the resource by a qualified paleontologist and appropriate handling of any potential resource. This mitigation measure would reduce this impact to a ***less-than-significant*** level.

MITIGATION MEASURE(S)

Mitigation Measure 3.4-2: *If any paleontological resources are found during grading and construction activities of the Specific Plan, all work shall be halted immediately within a 200-foot radius of the discovery until a qualified paleontologist has evaluated the find.*

Work shall not continue at the discovery site until the paleontologist evaluates the find and makes a determination regarding the significance of the resource and identifies recommendations for conservation of the resource, including preserving in place or relocating on the Specific Plan Area, if feasible, or collecting the resource to the extent feasible and documenting the find with the University of California Museum of Paleontology.

This section provides a background discussion of greenhouse gases and climate change linkages and effects of global climate change. This section is organized with an existing setting, regulatory setting, approach/methodology, and impact analysis. The analysis and discussion of the greenhouse gases (GHGs), climate change, and energy conservation impacts in this section focuses on the proposed Specific Plan's consistency with local, regional, and statewide climate change planning efforts and discusses the context of these planning efforts as they relate to the proposed Specific Plan. Disclosure and discussion of the Specific Plan's estimated energy usage and greenhouse gas emissions are provided. This section is based in part on the following documents, reports, and studies:

- *Air Quality and Land Use Handbook: A Community Health Perspective* (California Air Resources Board, 2005);
- *California Emissions Estimator Model* (CalEEMod), v.2016.3.2 (California Air Pollution Control Officers Association [CAPCOA], 2017);
- *Greenhouse Gas Thresholds for Sacramento County* (SMAQMD, 2020);
- *Guide to Air Quality Assessment in Sacramento County (CEQA Guide)* (SMAQMD, 2020).

One comment was received during the public review period or scoping meeting for the Notice of Preparation regarding this topic from the Sacramento Metropolitan Air Quality Management District (SMAQMD) (September 1, 2020). This comment is addressed within this section. Full comments received are included in Appendix A.

3.5.1 ENVIRONMENTAL SETTING

GREENHOUSE GASES AND CLIMATE CHANGE LINKAGES

Various gases in the Earth's atmosphere, classified as atmospheric GHGs, play a critical role in determining the Earth's surface temperature. Solar radiation enters the Earth's atmosphere from space, and a portion of the radiation is absorbed by the Earth's surface. The Earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation.

Naturally occurring GHGs include water vapor (H_2O), carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and ozone (O_3). Several classes of halogenated substances that contain fluorine, chlorine, or bromine are also GHGs, but they are, for the most part, solely a product of industrial activities. Although the direct GHGs CO_2, CH_4, and N_2O occur naturally in the atmosphere, human activities have changed their atmospheric concentrations. From the pre-industrial era (i.e., ending about 1750) to 2011, concentrations of these three GHGs have increased globally by 40, 150, and 20 percent, respectively (IPCC, 2013).

GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that otherwise would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect. Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), ozone (O_3), water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs).

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. In California, the transportation sector is the largest emitter of GHGs, followed by the industrial and electricity generation sectors (California Energy Commission, 2020).

As the name implies, global climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern, respectively. California produced 425 million gross metric tons of carbon dioxide equivalents ($MMTCO_2e$) in 2018 (California Air Resources Board, 2020a).

Carbon dioxide equivalents are a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is also dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted.

Consumption of fossil fuels in the transportation sector was the single largest source of California's GHG emissions in 2017, accounting for 41% of total GHG emissions in the state. This category was followed by the industrial sector (24%), the electricity generation sector (including both in-state and out of-state sources) (15%), the agriculture sector (8%), the residential energy consumption sector (7%), and the commercial energy consumption sector (5%) (California Air Resources Board, 2020c).

EFFECTS OF GLOBAL CLIMATE CHANGE

The effects of increasing global temperature are far-reaching and extremely difficult to quantify. The scientific community continues to study the effects of global climate change. In general, increases in the ambient global temperature as a result of increased GHGs are anticipated to result in rising sea levels, which could threaten coastal areas through accelerated coastal erosion, threats to levees and inland water systems and disruption to coastal wetlands and habitat.

If the temperature of the ocean warms, it is anticipated that the winter snow season would be shortened. Snowpack in the Sierra Nevada provides both water supply (runoff) and storage (within the snowpack before melting), which is a major source of supply for the State. The snowpack portion of the supply could potentially decline by 50% to 75% by the end of the 21st century (National Resources Defense Council, 2014). This phenomenon could lead to significant challenges in securing an adequate water supply for a growing state population. Further, the increased ocean temperature could result in increased moisture flux into the State; however, since this would likely increasingly come in the form of rain rather than snow in the high elevations, increased precipitation could lead to increased potential and severity of flood events, placing more pressure on California's levee/flood control system.

Sea level has risen approximately seven inches during the last century and it is predicted to rise an additional 22 to 35 inches by 2100, depending on the future GHG emissions levels (California Environmental Protection Agency, 2010). If this occurs, resultant effects could include increased

coastal flooding, saltwater intrusion and disruption of wetlands. As the existing climate throughout California changes over time, mass migration of species, or failure of species to migrate in time to adapt to the perturbations in climate, could also result. Under the emissions scenarios of the Climate Scenarios report (California Environmental Protection Agency, 2010), the impacts of global warming in California are anticipated to include, but are not limited to, the following:

Public Health

Higher temperatures are expected to increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation are projected to increase from 25% to 35% under the lower warming range and from 75% to 85% under the medium warming range. In addition, if global background ozone levels increase as predicted in some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances depending on wind conditions. The Climate Scenarios report indicates that large wildfires could become up to 55% more frequent if GHG emissions are not significantly reduced.

In addition, under the higher warming scenario, there could be up to 100 more days per year with temperatures above 90°F in Los Angeles and 95°F in Sacramento by 2100. This is a large increase over historical patterns and approximately twice the increase projected if temperatures remain within or below the lower warming range. Rising temperatures will increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress caused by extreme heat.

Water Resources

A vast network of man-made reservoirs and aqueducts capture and transport water throughout the State from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snow pack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snow pack, increasing the risk of summer water shortages.

The State's water supplies are also at risk from rising sea levels. An influx of saltwater would degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta, a major State fresh water supply. Global warming is also projected to seriously affect agricultural areas, with California farmers projected to lose as much as 25% of the water supply they need; decrease the potential for hydropower production within the State (although the effects on hydropower are uncertain); and seriously harm winter tourism. Under the lower warming range, the snow dependent winter recreational season at lower elevations could be reduced by as much as one month. If temperatures reach the higher warming range and precipitation declines, there might be many years with insufficient snow for skiing, snowboarding, and other snow dependent recreational activities.

If GHG emissions continue unabated, more precipitation will fall as rain instead of snow, and the snow that does fall will melt earlier, reducing the Sierra Nevada spring snow pack by as much as 70% to 90%. Under the lower warming scenario, snow pack losses are expected to be only half as large as those expected if temperatures were to rise to the higher warming range. How much snow pack will be lost depends in part on future precipitation patterns, the projections for which remain uncertain. However, even under the wetter climate projections, the loss of snow pack would pose challenges to water managers, hamper hydropower generation, and nearly eliminate all skiing and other snow-related recreational activities.

Agriculture

Increased GHG emissions are expected to cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. Although higher carbon dioxide levels can stimulate plant production and increase plant water-use efficiency, California's farmers will face greater water demand for crops and a less reliable water supply as temperatures rise.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures are likely to worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits and nuts, and milk.

Crop growth and development will be affected, as will the intensity and frequency of pest and disease outbreaks. Rising temperatures will likely aggravate ozone pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

In addition, continued global warming will likely shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion is expected in many species while range contractions are less likely in rapidly evolving species with significant populations already established. Should range contractions occur, it is likely that new or different weed species will fill the emerging gaps. Continued global warming is also likely to alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

Forests and Landscapes

Global warming is expected to alter the distribution and character of natural vegetation thereby resulting in a possible increased risk of large of wildfires. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55%, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks will not be uniform throughout the State. For example, if precipitation increases as temperatures rise, wildfires in southern California are expected to increase by approximately 30% toward the end of the century. In contrast, precipitation decreases could increase wildfires in northern California by up to 90%.

Moreover, continued global warming will alter natural ecosystems and biological diversity within the State. For example, alpine and sub-alpine ecosystems are expected to decline by as much as 60% to 80% by the end of the century as a result of increasing temperatures. The productivity of the State's forests is also expected to decrease as a result of global warming.

Rising Sea Levels

Rising sea levels, more intense coastal storms, and warmer water temperatures will increasingly threaten the State's coastal regions. Under the higher warming scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate coastal areas with saltwater, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats.

ENERGY CONSUMPTION

Energy in California is consumed from a wide variety of sources. Fossil fuels (including gasoline and diesel fuel, natural gas, and energy used to generate electricity) are the most widely used form of energy in the State. However, renewable sources of energy (such as solar and wind) are growing in proportion to California's overall energy mix. A large driver of renewable sources of energy in California is the State's current Renewable Portfolio Standard (RPS), which requires the State to derive at least 33% of electricity generated from renewable resources by 2020, 60 percent by 2030, and to achieve zero-carbon emissions by 2045 (as passed in September 2018, under AB 100).

Overall, in 2018, California's per capita energy usage was ranked fourth-lowest in the nation (U.S. EIA, 2020b). California's per capita rate of energy usage has remained relatively constant since the 1970s. Many State regulations since the 1970s, including new building energy efficiency standards, vehicle fleet efficiency measures, as well as growing public awareness, have helped to keep per capita energy usage in the State under control.

The consumption of non-renewable energy (i.e., fossil fuels) associated with the operation of passenger, public transit, and commercial vehicles, results in GHG emissions that contribute to global climate change. Alternative fuels such as natural gas, ethanol, and electricity (unless derived from solar, wind, nuclear, or other energy sources that do not produce carbon emissions) also result in GHG emissions and contribute to global climate change.

Electricity Consumption

California relies on a regional power system composed of a diverse mix of natural gas, renewable, hydroelectric, and nuclear generation resources. In 2016, more than one-fourth of the electricity supply comes from facilities outside of the State. Much of the power delivered to California from states in the Pacific Northwest was generated by wind. States in the Southwest delivered power generated at coal-fired power plants, at natural gas-fired power plants, and from nuclear generating stations (U.S. EIA, 2020a). In 2016, approximately 50 percent of California's utility-scale net electricity generation was fueled by natural gas. In addition, about 25 percent of the State's utility-scale net electricity generation came from non-hydroelectric renewable technologies, such as solar, wind, geothermal, and biomass. Another 14 percent of the State's utility-scale net electricity

generation came from hydroelectric generation, and nuclear energy powered an additional 11 percent. The amount of electricity generated from coal is negligible (approximately 0.2 percent) (U.S. EIA, 2020a). The percentage of renewable resources as a proportion of California's overall energy portfolio is increasing over time, as directed the State's Renewable Portfolio Standard (RPS).

According to the California Energy Commission (CEC), total statewide electricity consumption increased from 166,979 gigawatt-hours (GWh) in 1980 to 228,038 GWh in 1990, which is an estimated annual growth rate of 3.66 percent. The statewide electricity consumption in 1997 was 246,225 GWh, reflecting an annual growth rate of 1.14 percent between 1990 and 1997 (U.S. EIA, 2020b). Statewide consumption was 274,985 GWh in 2010, an annual growth rate of 0.9 percent between 1997 and 2010. In 2019, electricity consumption in Sacramento County was 10,828 GWh (California Energy Commission, 2020).

Natural Gas/Propane

The State produces approximately 12 percent of its natural gas, while obtaining 22 percent from Canada and 65 percent from the Rockies and the Southwest (California Energy Commission, 2012). In 2006, California produced 325.6 billion cubic feet of natural gas (California Energy Commission, 2012). The Sacramento Municipal Utility District (SMUD) provides electricity for most of Sacramento County, including most of Citrus Heights. In 2019, natural gas consumption in Sacramento County was approximately 312 million therms (California Energy Commission, 2020).

Oil

The primary energy source for the United States is oil, which is refined to produce fuels like gasoline, diesel, and jet fuel. Oil is a finite, nonrenewable energy source. World consumption of petroleum products has grown steadily in the last several decades. As of 2016, world consumption of oil had reached 96 million barrels per day. The United States, with approximately five percent of the world's population, accounts for approximately 19 percent of world oil consumption, or approximately 18.6 million barrels per day (U.S. EIA, 2020c). The transportation sector relies heavily on oil. In California, petroleum-based fuels currently provide approximately 96 percent of the State's transportation energy needs.

3.5.2 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: NAAQS for criteria air pollutants, hazardous air pollutant standards, State attainment plans, motor National Ambient Air Quality Standards (NAAQS) vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The EPA is responsible for administering the FCAA. The FCAA requires the EPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health, and secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

On April 2, 2007, in the court case of *Massachusetts et al. vs. the USEPA et al*. (549 U.S. 497), the U.S. Supreme Court found that GHGs are air pollutants covered by the federal Clean Air Act (42 USC §§ 7401-7671q). The Supreme Court held that the Administrator of the United States Environmental Protection Agency must determine whether or not emissions of GHGs from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. In making these decisions, the Administrator is required to follow the language of Section 202(a) of the Clean Air Act. On December 7, 2009, the Administrator signed two distinct findings regarding GHGs under Section 202(a) of the Clean Air Act:

- Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed GHGs (carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride) in the atmosphere threaten the public health and welfare of current and future generations.

- Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution, which threatens public health and welfare.

These findings do not themselves impose any requirements on industry or other entities. However, this action was a prerequisite for implementing GHG emission standards for vehicles. In collaboration with the National Highway Traffic Safety Administration (NHTSA) and CARB, the USEPA developed emission standards for light-duty vehicles (2012-2025 model years), and heavy-duty vehicles (2014-2027 model years).

Energy Policy and Conservation Act

The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through this Act, Congress established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the Act, the National Highway Traffic and Safety Administration, which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards.

Since 1990, the fuel economy standard for new passenger cars has been 27.5 mpg. Since 1996, the fuel economy standard for new light trucks (gross vehicle weight of 8,500 pounds or less) has been 20.7 mpg. Heavy-duty vehicles (i.e., vehicles and trucks over 8,500 pounds gross vehicle weight) are not currently subject to fuel economy standards. Compliance with federal fuel economy standards is determined on the basis of each manufacturer's average fuel economy for the portion of its vehicles produced for sale in the U.S. The Corporate Average Fuel Economy (CAFE) program, which is administered by the EPA, was created to determine vehicle manufacturers' compliance with the

fuel economy standards. The EPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

Energy Policy Act of 1992 (EPAct)

The Energy Policy Act of 1992 (EPAct) was passed to reduce the country's dependence on foreign petroleum and improve air quality. EPAct includes several parts intended to build an inventory of alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. EPAct requires certain federal, State, and local government and private fleets to purchase a percentage of light duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are included in EPAct. Federal tax deductions will be allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the act to consider a variety of incentive programs to help promote AFVs.

Energy Policy Act of 2005

The Energy Policy Act of 2005 was signed into law on August 8, 2005. Generally, the act provides for renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for a clean renewable energy and rural community electrification; and establishes a federal purchase requirement for renewable energy.

Federal Climate Change Policy

According to the EPA, "the United States government has established a comprehensive policy to address climate change" that includes slowing the growth of emissions; strengthening science, technology, and institutions; and enhancing international cooperation. To implement this policy, "the Federal government is using voluntary and incentive-based programs to reduce emissions and has established programs to promote climate technology and science." The EPA administers multiple programs that encourage voluntary GHG reductions, including "ENERGY STAR", "Climate Leaders", and Methane Voluntary Programs. However, as of this writing, there are no adopted federal plans, policies, regulations, or laws directly regulating GHG emissions.

Mandatory Greenhouse Gas Reporting Rule

On September 22, 2009, EPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the United States. In general, this national reporting requirement will provide EPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of CO_2 per year. This publicly available data will allow the reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future. Reporting is at the facility level, except that certain suppliers of fossil fuels and industrial GHGs along with vehicle and engine manufacturers will report at the corporate level. An estimated 85% of the total U.S. GHG emissions, from approximately 10,000 facilities, are covered by this final rule.

STATE

The California Legislature has enacted a series of statutes in recent years addressing the need to reduce GHG emissions all across the State. These statutes can be categorized into four broad categories: (i) statutes setting numerical statewide targets for GHG reductions, and authorizing CARB to enact regulations to achieve such targets; (ii) statutes setting separate targets for increasing the use of renewable energy for the generation of electricity throughout the State; (iii) statutes addressing the carbon intensity of vehicle fuels, which prompted the adoption of regulations by CARB; and (iv) statutes intended to facilitate land use planning consistent with statewide climate objectives. The discussion below will address each of these key sets of statutes, as well as CARB "Scoping Plans" intended to achieve GHG reductions under the first set of statutes and recent building code requirements intended to reduce energy consumption.

Statutes Setting Statewide GHG Reduction Targets

ASSEMBLY BILL 32 (GLOBAL WARMING SOLUTIONS ACT)

In September 2006, the California State Legislature enacted the California Global Warming Solutions Act of 2006 (Health & Saf. Code, § 38500 et seq.), also known as Assembly Bill (AB) 32 (Stats. 2006, ch. 488). AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and a cap on statewide GHG emissions. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by 2020. This reduction will be accomplished through an enforceable statewide cap on GHG emissions that was phased in starting in 2012. To effectively implement the cap, AB 32 directs the California Air Resources Board (CARB) to develop and implement regulations to reduce statewide GHG emissions from stationary sources.

SENATE BILL 32

Effective January 1, 2017, SB 32 (Stats. 2016, ch. 249) added a new section 38566 to the Health and Safety Code. It provides that "[i]n adopting rules and regulations to achieve the maximum technologically feasible and cost-effective greenhouse gas emissions reductions authorized by [Division 25.5 of the Health and Safety Code], [CARB] shall ensure that statewide greenhouse gas emissions are reduced to at least 40 percent below the statewide greenhouse gas emissions limit no later than December 31, 2030." In other words, SB 32 requires California, by the year 2030, to reduce its statewide GHG emissions so that they are 40 percent below those that occurred in 1990.

Between AB 32 (2006) and SB 32 (2016), the Legislature has codified some of the ambitious GHG reduction targets included within certain high-profile Executive Orders issued by the last two Governors. The 2020 statewide GHG reduction target in AB 32 was consistent with the second of three statewide emissions reduction targets set forth in former Governor Arnold Schwarzenegger's 2005 Executive Order known as S-3-05, which is expressly mentioned in AB 32. (See Health & Saf. Code, § 38501, subd. (i).) That Executive Branch document included the following GHG emission reduction targets: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; by 2050, reduce GHG emissions to 80 percent below 1990 levels. To meet the targets, the Governor directed several State agencies to cooperate in the development of a climate action plan. The Secretary of Cal-EPA leads the Climate Action Team, whose goal is to implement global

warming emission reduction programs identified in the Climate Action Plan and to report on the progress made toward meeting the emission reduction targets established in the executive order.

In April 2015, Governor Brown issued another Executive Order, B-30-15, which created a "new interim statewide GHG emission reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030 is established in order to ensure California meets its target of reducing GHG emissions to 80 percent below 1990 levels by 2050." SB 32 codified this target.

In September 2018, the Governor issued Executive Order B-55-18, which established a statewide goal to "achieve carbon neutrality as soon as possible, and no later than 2045, and maintain and achieve negative emissions thereafter." The order directs the CARB to work with other State agencies to identify and recommend measures to achieve those goals.

Notably, the Legislature has not yet set a 2045 or 2050 target in the manner done for 2020 and 2030 through AB 32 and SB 32, though references to a 2050 target can be found in statutes outside the Health and Safety Code. In the 2015 legislative session, the Legislature passed Senate Bill 350 (SB 350) (Stats. 2015, ch. 547) (discussed in more detail below). This legislation added to the Public Utilities Code language that essentially puts into statute the 2050 GHG reduction target already identified in Executive Order S-3-05, albeit in the limited context of new state policies (i) increasing the overall share of electricity that must be produced through renewable energy sources and (ii) directing certain State agencies to begin planning for the widespread electrification of the California vehicle fleet. Section 740.12(a)(1)(D) of the Public Utilities Code now states that "[t]he Legislature finds and declares [that] … [r]educing emissions of [GHGs] to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050 will require widespread transportation electrification." Furthermore, Section 740.12(b) now states that the California Public Utilities Commission (PUC), in consultation with CARB and the California Energy Commission (CEC), must "direct electrical corporations to file applications for programs and investments to accelerate widespread transportation electrification to reduce dependence on petroleum, meet air quality standards, … and reduce emissions of greenhouse gases to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050."

Statute Setting Target for the Use of Renewable Energy for the Generation of Electricity

CALIFORNIA RENEWABLES PORTFOLIO STANDARD

In September 2002, the Legislature enacted Senate Bill 1078 (Stats. 2002, ch. 516), which established the Renewables Portfolio Standard program, requiring retail sellers of electricity, including electrical corporations, community choice aggregators, and electric service providers, to purchase a specified minimum percentage of electricity generated by eligible renewable energy resources such as wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas. (See Pub. Utilities Code, § 399.11 et seq. [subsequently amended].) The legislation set a target by which 20 percent of the State's electricity would be generated by renewable sources. (Pub. Utility Code, § 399.11, subd (a) [subsequently amended].) As described in the Legislative Counsel's Digest, Senate Bill 1078 required "[e]ach electrical corporation … to increase its total procurement of eligible

renewable energy resources by at least one percent per year so that 20 percent of its retail sales are procured from eligible renewable energy resources. If an electrical corporation fails to procure sufficient eligible renewable energy resources in a given year to meet an annual target, the electrical corporation would be required to procure additional eligible renewable resources in subsequent years to compensate for the shortfall, if funds are made available as described. An electrical corporation with at least 20 percent of retail sales procured from eligible renewable energy resources in any year would not be required to increase its procurement in the following year."

In September 2006, the Legislature enacted Senate Bill 107 (Stats. 2006, ch. 464), which modified the Renewables Portfolio Standard to require that at least 20 percent of electricity retail sales be served by renewable energy resources by year 2010. (Pub. Utility Code, § 399.11, subd (a) [subsequently amended].)

In April 2011, the Legislature, in a special session, enacted Senate Bill X1-2 (Stats. 2011, 1st Ex. Sess., ch. 1), which set even more aggressive statutory targets for renewable electricity, culminating in the requirement that 33 percent of the State's electricity come from renewables by 2020. This legislation applies to all electricity retailers in the State, including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must meet renewable energy goals of 20 percent of retail sales from renewables by the end of 2013, 25 percent by the end of 2016, and 33 percent by the end of 2020. (See Pub. Utility Code, § 399.11 et seq. [subsequently amended].)

In 2015, the Legislature enacted Senate Bill 350 (SB 350) (Stats. 2015, ch. 547) (discussed above). It increases the Renewable Portfolio Standard to require 50 percent of electricity generated to be from renewables by 2030. (Pub. Utility Code, § 399.11, subd (a); see also § 399.30, subd. (c)(2).) Of equal significance, Senate Bill 350 also embodies a policy encouraging a substantial increase in the use of electric vehicles. As noted earlier, Section 740.12(b) of the Public Utilities Code now states that the PUC, in consultation with CARB and the CEC, must "direct electrical corporations to file applications for programs and investments to accelerate widespread transportation electrification to reduce dependence on petroleum, meet air quality standards, … and reduce emissions of greenhouse gases to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050."

In March 2012, Governor Brown had issued an Executive Order, B-16-12, which embodied a similar vision of a future in which zero-emission vehicles (ZEV) will play a big part in helping the State meet its GHG reduction targets. Executive Order B-16-12 directed State government to accelerate the market for in California through fleet replacement and electric vehicle infrastructure. The Executive Order set the following targets:

- By 2015, all major cities in California will have adequate infrastructure and be "ZEV ready";
- By 2020, the State will have established adequate infrastructure to support 1 million ZEVs in California;
- By 2025, there will be 1.5 million ZEVs on the road in California; and
- By 2050, virtually all personal transportation in the State will be based on ZEVs, and GHG emissions from the transportation sector will be reduced by 80 percent below 1990 levels.

In 2018, the Legislature enacted, and the Governor signed, Senate Bill 100 (Stats. 2018, ch. 312), which revises the above-described deadlines and targets so that the State will have to achieve a 50% renewable resources target by December 31, 2026 (instead of by 2030) and achieve a 60% target by December 31, 2030. The legislation also establishes a State policy that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all State agencies by December 31, 2045.

In summary, California has set a statutory goal of requiring that, by the year 2030, 60 percent of the electricity generated in California should be from renewable sources, with increased generation capacity intended to allow the mass conversion of the statewide vehicle fleet from petroleum-fueled vehicles to electrical vehicles and/or other ZEVs. By 2045, all electricity must come from renewable resources and other carbon-free resources. Former Governor Brown had an even more ambitious goal for the State of achieving carbon neutrality as soon as possible and by no later than 2045. The Legislature is thus looking to California drivers to buy electric cars, powered by green energy, to help the State meet its aggressive statutory goal, created by SB 32, of reducing statewide GHG emissions by 2030 to 40 percent below 1990 levels. Another key prong to this strategy is to make petroleum-based fuels less carbon-intensive. A number of statutes in recent years have addressed that strategy. These are discussed immediately below.

Statutes and CARB Regulations Addressing the Carbon Intensity of Petroleum-Based Transportation Fuels

ASSEMBLY BILL 1493, PAVLEY CLEAN CARS STANDARDS

In July 2002, the Legislature enacted Assembly Bill 1493 ("Pavley Bill") (Stats. 2002, ch. 200), which directed the CARB to develop and adopt regulations that achieve the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty trucks beginning with model year 2009. (See Health & Saf. Code, § 43018.5.) In September 2004, pursuant to this directive, CARB approved regulations to reduce GHG emissions from new motor vehicles beginning with the 2009 model year. These regulations created what are commonly known as the "Pavley standards." In September 2009, CARB adopted amendments to the Pavley standards to reduce GHG emissions from new motor vehicles through the 2016 model year. These regulations created what are commonly known as the "Pavley II standards." (See California Code of Regulations, Title 13, §§ 1900, 1961, and 1961.1 et seq.)

In January 2012, CARB adopted an Advanced Clean Cars (ACC) program aimed at reducing both smog-causing pollutants and GHG emissions for vehicles model years 2017-2025. This historic program, developed in coordination with the USEPA and NHTSA, combined the control of smog-causing (criteria) pollutants and GHG emissions into a single coordinated set of requirements for model years 2015 through 2025. The regulations focus on substantially increasing the number of plug-in hybrid cars and zero-emission vehicles in the vehicle fleet and on making fuels such as electricity and hydrogen readily available for these vehicle technologies. The components of the ACC program are the Low-Emission Vehicle (LEV) regulations that reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles, and the Zero-Emission Vehicle (ZEV) regulation, which requires manufacturers to produce an increasing number of pure ZEVs (meaning battery

electric and fuel cell electric vehicles), with provisions to also produce plug-in hybrid electric vehicles in the 2018 through 2025 model years. (See California Code of Regulations, Title 13, §§ 1900, 1961, 1961.1, 1961.2, 1961.3, 1965, 1968.2, 1968.5, 1976, 1978, 2037, 2038, 2062, 2112, 2139, 2140, 2145, 2147, 2235, and 2317 et seq.)

It is expected that the Pavley regulations will reduce GHG emissions from California passenger vehicles by about 34 percent below 2016 levels by 2025, all while improving fuel efficiency and reducing motorists' costs.

Cap and Trade Program

On October 20, 2011, in a related action, CARB adopted the final cap-and-trade program for California. (See California Code of Regulations, Title 17, §§ 95801-96022.) The California cap-and-trade program will create a market-based system with an overall emissions limit for affected sectors. The program is intended to regulate more than 85 percent of California's emissions and staggers compliance requirements according to the following schedule: (1) electricity generation and large industrial sources (2012); (2) fuel combustion and transportation (2015).

According to 2012 guidance published by CARB, "[t]he Cap-and-Trade Program will reduce GHG emissions from major sources (covered entities) by setting a firm cap on statewide GHG emissions while employing market mechanisms to cost-effectively achieve the emission-reduction goals. The statewide cap for GHG emissions from major sources, which is measured in metric tons of carbon dioxide equivalent (MTCO2e), will commence in 2013 and decline over time, achieving GHG emission reductions throughout the program's duration. Each covered entity will be required to surrender one permit to emit (the majority of which will be allowances, entities are also allowed to use a limited number of CARB offset credits) for each ton of GHG emissions they emit. Some covered entities will be allocated some allowances and will be able to buy additional allowances at auction, purchase allowances from others, or purchase offset credits."

The guidance goes on to say that "[s]tarting in 2012, major GHG-emitting sources, such as electricity generation (including imports), and large stationary sources (e.g., refineries, cement production facilities, oil and gas production facilities, glass manufacturing facilities, and food processing plants) that emit more than 25,000 $MTCO_2e$ per year will have to comply with the Cap-and-Trade Program. The program expands in 2015 to include fuel distributors (natural gas and propane fuel providers and transportation fuel providers) to address emissions from transportation fuels, and from combustion of other fossil fuels not directly covered at large sources in the program's initial phase." In early April 2017, the Third District Court of Appeal upheld the lawfulness of the cap-and-trade program as a "fee" rather than a "tax." (See *California Chamber of Commerce et al. v. State Air Resources Board et al.* (2017) 10 Cal.App.5th 604.)

In early 2017, the Legislature enacted, and the Governor signed, AB 398 (Stats. 2017, ch. 135), which extended the life of the existing Cap and Trade Program through December 2030.

Statute Intended to Facilitate Land Use Planning Consistent with Statewide Climate Objectives

CALIFORNIA SENATE BILL 375 (SUSTAINABLE COMMUNITIES STRATEGY)

This 2008 legislation built on AB 32 by setting forth a mechanism for coordinating land use and transportation on a regional level for the purpose of reducing GHGs. The focus is to reduce miles traveled by passenger vehicles and light trucks. CARB is required to set GHG reduction targets for each metropolitan region for the years 2020 and 2035. Each of California's metropolitan planning organizations then prepares a sustainable communities strategy that demonstrates how the region will meet its GHG reduction target through integrated land use, housing, and transportation planning. Once adopted by the metropolitan planning organizations, the sustainable communities strategy is to be incorporated into that region's federally enforceable regional transportation plan. If a metropolitan planning organization is unable to meet the targets through the sustainable communities strategy, then an alternative planning strategy must be developed which demonstrates how targets could be achieved, even if meeting the targets is deemed to be infeasible.

Climate Change Scoping Plans

AB 32 SCOPING PLAN

In December 2008, CARB adopted the Climate Change Scoping Plan, which contains the main strategies California will implement to achieve reduction of approximately 118 million metric tons (MMT) CO_2e, or approximately 22 percent from the State's projected 2020 emission level of 545 MMT of CO_2e under a business-as-usual scenario. This is a reduction of 47 MMT CO_2e, or almost 10 percent, from 2008 emissions. CARB's original 2020 projection was 596 MMT CO_2e, but this revised 2020 projection takes into account the economic downturn that occurred in 2008. The Scoping Plan also includes CARB recommended GHG reductions for each emissions sector of the State GHG inventory. CARB estimates the largest reductions in GHG emissions would be by implementing the following measures and standards:

- improved emissions standards for light-duty vehicles (26.1 MMT CO_2e);
- the Low Carbon Fuel Standard (15.0 MMT CO_2e);
- energy efficiency measures in buildings and appliances (11.9 MMT CO_2e); and
- renewable portfolio and electricity standards for electricity production (23.4 MMT CO_2e).

In 2011, CARB adopted a cap-and-trade regulation. The cap-and-trade program covers major sources of GHG emissions in the State such as refineries, power plants, industrial facilities, and transportation fuels. The cap-and-trade program includes an enforceable emissions cap that will decline over time. The State distributes allowances, which are tradable permits, equal to the emissions allowed under the cap. Sources under the cap are required to surrender allowances and offsets equal to their emissions at the end of each compliance period. Enforceable compliance obligations started in 2013. The program applies to facilities that comprise 85 percent of the State's GHG emissions.

With regard to land use planning, the Scoping Plan expects that reductions of approximately 3.0 MMT CO_2e will be achieved through implementation of Senate Bill (SB) 375, which is discussed further below.

2014 SCOPING PLAN UPDATE

In response to comments on the 2008 Scoping Plan, and AB 32's requirement to update the Scoping Plan every five years, CARB revised and reapproved the Scoping Plan, and prepared the First Update to the 2008 Scoping Plan in 2014 (2014 Scoping Plan). The 2014 Scoping Plan contains the main strategies California will implement to achieve a reduction of 80 MMT of CO_2e emissions, or approximately 16 percent, from the State's projected 2020 emission level of 507 MMT of CO_2e under the business-as-usual scenario defined in the 2014 Scoping Plan. The 2014 Scoping Plan also includes a breakdown of the amount of GHG reductions CARB recommends for each emissions sector of the State's GHG inventory. Several strategies to reduce GHG emissions are included: the Low Carbon Fuel Standard, the Pavley Rule, the ACC program, the Renewable Portfolio Standard, and the Sustainable Communities Strategy.

2017 SB 32 SCOPING PLAN

With the passage of SB 32, the Legislature also passed companion legislation AB 197, which provides additional direction for developing the scoping plan. In response to these two pieces of legislation, CARB adopted an updated Scoping Plan in December 2017. The document represents a second update to the scoping plan to reflect the 2030 target of reducing statewide GHG emissions by 40 percent below 1990 levels codified by SB 32. The GHG reduction strategies in the plan that CARB will implement to meet the target include:

- SB 350 - achieve 50 percent Renewables Portfolio Standard (RPS) by 2030 and doubling of energy efficiency savings by 2030;
- Low Carbon Fuel Standard - increased stringency (reducing carbon intensity 18 percent by 2030, up from 10 percent in 2020);
- Mobile Source Strategy (Cleaner Technology and Fuels Scenario) - maintaining existing GHG standards for light- and heavy-duty vehicles, put 4.2 million zero-emission vehicles on the roads, and increase zero-emission buses, delivery and other trucks;
- Sustainable Freight Action Plan - improve freight system efficiency, maximize use of near-zero emission vehicles and equipment powered by renewable energy, and deploy over 100,000 zero-emission trucks and equipment by 2030;
- Short-Lived Climate Pollutant Reduction Strategy - reduce emissions of methane and hydrofluorocarbons 40 percent below 2013 levels by 2030 and reduce emissions of black carbon 50 percent below 2013 levels by 2030;
- SB 375 Sustainable Communities Strategies - increased stringency of 2035 targets;
- Post-2020 Cap-and-Trade Program - declining caps, continued linkage with Québec, and linkage to Ontario, Canada;
- 20 percent reduction in GHG emissions from the refinery sector; and
- By 2018, develop an Integrated Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

Building Code Requirements Intended to Reduce GHG Emissions

CALIFORNIA ENERGY CODE

The California Energy Code (California Code of Regulations, Title 24, Part 6), which is incorporated into the Building Energy Efficiency Standards, was first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Although these standards were not originally intended to reduce GHG emissions, increased energy efficiency results in decreased GHG emissions because energy efficient buildings require less electricity and thus less consumption of fossil fuels, which emit GHGs. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. The current 2019 Building Energy Efficiency Standards, commonly referred to as the "Title 24" standards, include changes from the previous standards that were adopted, to do the following:

- Provide California with an adequate, reasonably priced, and environmentally sound supply of energy.
- Respond to Assembly Bill 32, the Global Warming Solutions Act of 2006, which mandates that California must reduce its GHG emissions to 1990 levels by 2020.
- Pursue California energy policy that energy efficiency is the resource of first choice for meeting California's energy needs.
- Act on the California Energy Commission's Integrated Energy Policy Report, which finds that standards are the most cost effective means to achieve energy efficiency, states an expectation that the Building Energy Efficiency Standards will continue to be upgraded over time to reduce electricity and peak demand, and recognizes the role of the Building Energy Efficiency Standards in reducing energy related to meeting California's water needs and in reducing GHG emissions.
- Meet the West Coast Governors' Global Warming Initiative commitment to include aggressive energy efficiency measures into updates of State building codes.
- Meet Executive Order S-20-04, the Green Building Initiative, to improve the energy efficiency of non-residential buildings through aggressive standards.

The most recent Title 24 standards are the 2019 Title 24 standards. The 2019 Building Energy Efficiency Standards improve upon the 2016 Energy Standards for new construction of, and additions and alterations to, residential and nonresidential buildings. Buildings permitted on or after January 1, 2020, must comply with the 2019 Standards. The California Energy Commission updates the standards every three years.

Single-family homes built with the 2019 standards will use about 7 percent less energy due to energy efficiency measures versus those built under the 2016 standards. Once rooftop solar electricity generation is factored in, homes built under the 2019 standards will use about 53 percent less energy than those under the 2016 standards. This will reduce greenhouse gas emissions by 700,000 metric tons over three years, equivalent to taking 115,000 fossil fuel cars off the road. Nonresidential buildings will use about 30 percent less energy due mainly to lighting upgrades.

CALIFORNIA GREEN BUILDING STANDARDS CODE

The purpose of the California Green Building Standards Code (California Code of Regulations Title 24, Part 11) is to improve public health and safety and to promote the general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices in the following categories: 1) planning and design; 2) energy efficiency; 3) water efficiency and conservation; 4) material conservation and resource efficiency; and 5) environmental quality. The California Green Building Standards, which became effective on January 1, 2011, instituted mandatory minimum environmental performance standards for all ground-up new construction of commercial, low-rise residential uses, and State-owned buildings, as well as schools and hospitals. The mandatory standards require the following:

- 20 percent mandatory reduction in indoor water use relative to baseline levels;
- 50 percent construction/demolition waste must be diverted from landfills;
- Mandatory inspections of energy systems to ensure optimal working efficiency; and
- Low-pollutant emitting exterior and interior finish materials such as paints, carpets, vinyl flooring, and particle boards.

The voluntary standards require the following:

- **Tier I:** 15 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 65 percent reduction in construction waste, 10 percent recycled content, 20 percent permeable paving, 20 percent cement reduction, and cool/solar reflective roof.
- **Tier II:** 30 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 75 percent reduction in construction waste, 15 percent recycled content, 30 percent permeable paving, 30 percent cement reduction, and cool/solar reflective roof.

CEQA Direction

In 2008, the Schwarzenegger administration, through the Office of Planning and Research (OPR), issued Guidance regarding assessing significance of GHGs in California Environmental Quality Act (CEQA) documents; that Guidance stated that the adoption of appropriate significance thresholds was a matter of discretion for the lead agency. The OPR Guidance states:

> "[T]he global nature of climate change warrants investigation of a statewide threshold of significance for GHG emissions. To this end, OPR has asked the CARB technical staff to recommend a method for setting thresholds which will encourage consistency and uniformity in the CEQA analysis of GHG emissions throughout the state. Until such time as state guidance is available on thresholds of significance for GHG emissions, we recommend the following approach to your CEQA analysis."

Determine Significance

- When assessing a project's GHG emissions, lead agencies must describe the existing environmental conditions or setting, without the project, which normally constitutes the baseline physical conditions for determining whether a project's impacts are significant.
- As with any environmental impact, lead agencies must determine what constitutes a significant impact. In the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a "significant impact," individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice.
- The potential effects of a project may be individually limited but cumulatively considerable. Lead agencies should not dismiss a proposed project's direct and/or indirect climate change impacts without careful consideration, supported by substantial evidence. Documentation of available information and analysis should be provided for any project that may significantly contribute new GHG emissions, either individually or cumulatively, directly or indirectly (e.g., transportation impacts).
- Although climate change is ultimately a cumulative impact, not every individual project that emits GHGs must necessarily be found to contribute to a significant cumulative impact on the environment. CEQA authorizes reliance on previously approved plans and mitigation programs that have adequately analyzed and mitigated GHG emissions to a less than significant level as a means to avoid or substantially reduce the cumulative impact of a project.

The OPR Guidance did not require Executive Order S-3-05 to be used as a significance threshold under CEQA. Rather, OPR recognized that, until the CARB establishes a statewide standard, selecting an appropriate threshold was within the discretion of the lead agency.

In 2010, the California Natural Resources Agency added section 15064.4 to the CEQA Guidelines, providing new legal requirements for how agencies should address GHG-related impacts in their CEQA documents. As amended in early 2019, section 15064.4 provides as follows:

> (a) The determination of the significance of greenhouse gas emissions calls for a careful judgment by the lead agency consistent with the provisions in section 15064. A lead agency shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project. A lead agency shall have discretion to determine, in the context of a particular project, whether to:
>
> (1) Quantify greenhouse gas emissions resulting from a project; and/or
>
> (2) Rely on a qualitative analysis or performance-based standards.

> (b) In determining the significance of a project's greenhouse gas emissions, the lead agency should focus its analysis on the reasonably foreseeable incremental contribution of the project's emissions to the effects of climate change. A project's incremental contribution may be cumulatively considerable even if it appears relatively small compared to statewide, national or global emissions. The agency's analysis should consider a timeframe that is appropriate for the project. The agency's analysis also must reasonably reflect evolving scientific knowledge and state regulatory schemes. A lead agency should consider the following factors, among others, when determining the significance of impacts from greenhouse gas emissions on the environment:
>
> (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
>
> (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
>
> (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions (see, e.g., section 15183.5(b)). Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project's incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project. In determining the significance of impacts, the lead agency may consider a project's consistency with the State's long-term climate goals or strategies, provided that substantial evidence supports the agency's analysis of how those goals or strategies address the project's incremental contribution to climate change and its conclusion that the project's incremental contribution is not cumulatively considerable.
>
> (c) A lead agency may use a model or methodology to estimate greenhouse gas emissions resulting from a project. The lead agency has discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligently take into account the project's incremental contribution to climate change. The lead agency must support its selection of a model or methodology with substantial evidence. The lead agency should explain the limitations of the particular model or methodology selected for use.

Section 15126.4, subdivision (c), provides guidance on how to formulate mitigation measures addressing GHG-related impacts:

> Consistent with section 15126.4(a), lead agencies shall consider feasible means, supported by substantial evidence and subject to monitoring or reporting, of

mitigating the significant effects of greenhouse gas emissions. Measures to mitigate the significant effects of greenhouse gas emissions may include, among others:

(1) Measures in an existing plan or mitigation program for the reduction of emissions that are required as part of the lead agency's decision;

(2) Reductions in emissions resulting from a project through implementation of project features, project design, or other measures, such as those described in Appendix F;

(3) Off-site measures, including offsets that are not otherwise required, to mitigate a project's emissions;

(4) Measures that sequester greenhouse gases;

(5) In the case of the adoption of a plan, such as a general plan, long range development plan, or plans for the reduction of greenhouse gas emissions, mitigation may include the identification of specific measures that may be implemented on a project-by-project basis. Mitigation may also include the incorporation of specific measures or policies found in an adopted ordinance or regulation that reduces the cumulative effect of emissions.

California Supreme Court Decisions

THE "NEWHALL RANCH" CASE

On November 30, 2015, the California Supreme Court released its opinion on *Center for Biological Diversity v. California Department of Fish and Wildlife* (2015) 62 Cal.4th 204 (hereafter referred to as the Newhall Ranch Case).

Because of the importance of the Supreme Court as the top body within the California Judiciary, and because of the relative lack of judicial guidance regarding how GHG issues should be addressed in CEQA documents, the opinion provides very important legal guidance to agencies charged with preparing EIRs.

The case involved a challenge to an EIR prepared by the California Department of Fish and Wildlife (CDFW) for the Newhall Ranch development project in Los Angeles County, which consists of approximately 20,000 dwelling units as well as commercial and business uses, schools, golf courses, parks and other community facilities in the City of Santa Clarita.

In relation to GHG analysis, the Newhall Ranch Case illustrates the difficulty of complying with statewide GHG reduction targets at the local level using CEQA to determine whether an individual project's GHG emissions will create a significant environmental impact triggering an EIR, mitigation, and/or statement of overriding consideration. The EIR utilized compliance with AB 32's GHG reduction goals as a threshold of significance and modelled its analysis on the CARB's business-as-usual (BAU) emissions projections from the 2008 Scoping Plan. The EIR quantified the project's

annual emissions at buildout and projected emissions in 2020 under a BAU scenario, in which no additional regulatory actions were taken to reduce emissions. Since the Scoping Plan determined a reduction of 29 percent from BAU was needed to meet AB 32's 2020 reduction goal, the EIR concluded that the project would have a less-than-significant impact because the project's annual GHG emissions were projected to be 31 percent below its BAU estimate.

The Supreme Court concluded that the threshold of significance used by the EIR was permissible; however, the BAU analysis lacked substantial evidence to demonstrate that the required percentage reduction from BAU is the same for an individual project as for the entire State. The court expressed skepticism that a percentage reduction goal applicable to the State as a whole would apply without change to an individual development project, regardless of its size or location. Therefore, the Supreme Court determined that the EIR's GHG analysis was not sufficient to support the conclusion that GHG impacts would be less than significant.

In addition, the Supreme Court provided the following guidance regarding potential alternative approaches to GHG impact assessment at the project level for lead agencies:

1. The lead agency determination of what level of GHG emission reduction from business-as-usual projection that a new land development at the proposed location would need to achieve to comply with statewide goals in the Scoping Plan requires an examination of data behind the Scoping Plan's business-as-usual emission projections. The lead agency must provide substantial evidence and account for the disconnect between the Scoping Plan, which dealt with the State as a whole, and an analysis of an individual project's land use emissions (the same issues with CEQA compliance addressed in this case);

2. The lead agency may use a project's compliance with performance-based standards – such as high building energy efficiency – adopted to fulfill a statewide plan to reduce or mitigate GHG emissions to assess consistency with AB 32 to the extent that the project features comply with or exceed the regulation (See Guidelines Section 15064.4(a)(2), (b)(3); see also Guidelines Section 15064(h)(3)). A significance analysis would then need to account for the additional GHG emissions – such as transportation emissions – beyond the regulated activity. Transportation emissions are in part a function of the location, size, and density or intensity of a project, and thus can be affected by local governments' land use decision making. Additionally, the lead agency may use a programmatic effort including a general plan, long range development plan, or a separate plan to reduce GHG emissions (such as Climate Action Plan or a SB 375 metropolitan regional transportation impact Sustainable Communities Strategy) that accounts for specific geographical GHG emission reductions to streamline or tier project level CEQA analysis pursuant to Guidelines 15183.5(a)-(b) for land use and Public Resources Code Section 21155.2 and 21159.28 and Guidelines Section 15183.5(c) for transportation.

3. The lead agency may rely on existing numerical thresholds of significance for GHG emissions (such as the Bay Area Air Quality Management District's proposed threshold of significance of 1,100 MT CO_2E in annual emission for CEQA GHG emission analysis on new land use projects). The use of a numerical value provides what is "normally" considered significant

but does not relieve a lead agency from independently determining the significance of the impact for the individual project (See Guidelines Section 15064.7).

THE SANDAG CASE

In *Cleveland National Forest Foundation v. San Diego Association of Governments* (2017) 3 Cal.5th 497 (*SANDAG)*, the Supreme Court addressed the extent to which, if any, an EIR for a Regional Transportation Plan (RTP) with a Sustainable Communities Strategy (SCS) must address the proposed Specific Plan's consistency with the 2050 target set forth in Executive Order S-03-05 (i.e., 80 percent below 1990 levels). The Court held that SANDAG did not abuse its discretion by failing to treat the 2050 GHG emissions target as a threshold of significance. The Court cautioned, however, that its decision applies narrowly to the facts of the case and that the analysis in the challenged EIR should not be used as an example for other lead agencies to follow going forward. Notably, the RTP itself covered a planning period that extended all the way to 2050.

The Court acknowledged the parties' agreement that "the Executive Order lacks the force of a legal mandate binding on SANDAG[.]" (*Id*. at p. 513.) This conclusion was consistent with the Court's earlier decision in *Professional Engineers in California Government v. Schwarzenegger* (2010) 50 Cal.4th 989, 1015, which held the Governor had acted in excess of his executive authority in ordering the furloughing of State employees as a money-saving strategy. In that earlier case, which is not mentioned in the *SANDAG* decision, the Court held that the decision to furlough employees was legislative in character, and thus could only be ordered by the Legislature, and not the Governor, who, under the State constitution, may only exercise executive authority. In *SANDAG*, the Court thus impliedly recognized that Governors do not have authority to set statewide legislative policy, particularly for decades into the future. Even so, however, the Court noted, and did not question, the parties' agreement that "the Executive Order's 2050 emissions reduction target is grounded in sound science." (3 Cal.5th at p. 513.) Indeed, the Court emphasized that, although "the Executive Order 'is not an adopted GHG reduction plan' and that 'there is no legal requirement to use it as a threshold of significance,'" the 2050 goal nevertheless "expresses the pace and magnitude of reduction efforts that the scientific community believes necessary to stabilize the climate.

"This scientific information has important value to policymakers and citizens in considering the emission impacts of a project like SANDAG's regional transportation plan." (*Id*. at p. 515.) Towards the end of the decision, the Court even referred to "the state's 2050 climate goals" as though the 2050 target from E.O. S-03-05 had some sort of standing under California law. (*Id*. at p. 519.) The Court seemed to reason that, because the Legislature had enacted both AB 32 and SB 32, which followed the downward GHG emissions trajectory recommended in the Executive Order, the Legislature, at some point, was also likely to adopt the 2050 target as well: "SB 32 … reaffirms California's commitment to being on the forefront of the dramatic greenhouse gas emission reductions needed to stabilize the global climate." (*Id*. at p. 519.) Finally, the Court explained that "planning agencies like SANDAG must ensure that CEQA analysis stays in step with evolving scientific knowledge and state regulatory schemes." (*Ibid*.)

In sum, the Court recognized that the Executive Order did not carry the force of law, but nevertheless considered it to be part of "state climate policy" because the Legislature, in enacting both AB 32 and

SB 32, seems to be following both the United Nations Intergovernmental Panel on Climate Change (IPCC) recommendations for reducing GHG emissions worldwide and evolving science. Nothing in the decision, however, suggests that all projects, regardless of their buildout period, must address the 2050 target or treat it as a significance threshold.

LOCAL

Citrus Heights General Plan

The Citrus Heights General Plan contains the following goals and policies that are relevant to GHGs, climate change, and/or energy:

COMMUNITY HEALTH ELEMENT

Goal 13: Increase activity in the Sunrise MarketPlace through transportation investments that enhance the convenience and safety of driving, riding transit, bicycling, and walking to, from, and within the district.

> **Policy 13.1:** Improve mobility in the Sunrise MarketPlace area to provide adequate access for vehicles, transit, bicycles and pedestrians.
>
> **Policy 13.2:** Create convenient connections across Sunrise Boulevard for vehicles, bicycles, pedestrians and transit.
>
> **Policy 13.3:** Promote installation of additional, distinctive transit stops at key activity areas and encourage covered shelters at existing and new stops.
>
> **Policy 13.4:** Facilitate the development of new buildings in areas currently devoted to parking to shorten distances between buildings and foster better pedestrian connections between shopping centers.
>
> **Policy 13:5:** Promote transit-oriented development through reuse and redevelopment of opportunity sites near the Greenback Lane/Sunrise Boulevard intersection, including potential mixed-use projects with a residential component. Coordinate potential development plans with transit near this intersection.

Goal 31: Provide access to public transit service to all Citrus Heights residents and high quality, frequent public transit service to those residents living along designated transit routes

> **Policy 31.1:** Strive to increase fixed-route and demand responsive (i.e., paratransit) transit service coverage and frequency to Citrus Heights residents and employees.
>
> **Policy 31.2:** Strive to provide public transit that is an attractive, convenient, dependable and safe alternative to the automobile.
>
> **Policy 31.3:** Consider express commuter bus service between Citrus Heights and major employment and transit centers.

Policy 31.4: Require new development to provide transit enhancements, (including, but not limited to bus pull-outs and bus shelters) where appropriate, that decrease transit travel times, improve access to transit stops, or improve the amenities, security, or travel information at transit stops.

Goal 40: Promote energy conservation through appropriate design and construction techniques.

Policy 40.1: Encourage new buildings to maximize solar access to promote passive solar energy use, natural ventilation, effective use of daylight, and on-site solar generation.

Policy 40.2: Promote a climate-appropriate tree planting and maintenance program in order to reduce ambient air temperature on hot sunny days, and require that all tree plantings and outdoor lighting be integrated.

Goal 41: Minimize building energy consumption and transition to clean, renewable energy sources.

Policy 41.1: Require energy-efficient site and building designs in new construction.

Policy 41.2: Provide financial incentives to maximize energy conservation and the use of clean and renewable energy.

Policy 41.3: Retrofit existing buildings using low maintenance, durable building materials and high-efficiency energy systems and appliances.

Policy 41.4: Reduce energy consumption supporting municipal operations.

Goal 53: Protect and improve air quality in the Citrus Heights area to the maximum extent possible.

Policy 53.1: Promote measures that improve air quality and help meet air quality attainment standards.

Policy 53.2: Minimize the impacts of vehicle emissions on air quality.

Policy 53.3: Promote use of clean alternative fuel vehicles and construction equipment.

Policy 53.4: Enable use of electric (rather than gasoline-powered) equipment and natural gas appliances, including outdoor grills.

Policy 53.5: Discourage the development of potential stationary sources of toxic air contaminants near sensitive receptors, and the siting of sensitive receptors near sources of toxic air contaminants.

Goal 54: Integrate air quality planning with land use and transportation planning.

Policy 54.1: Encourage alternative modes of transportation and trip-reducing strategies such as telecommuting and mixed-use development.

Policy 54.2: Participate in educational efforts aimed at improving air quality, such as notifying residents and businesses during "Spare the Air" days designated by the Sacramento Air Quality Management District.

Goal 55: Reduce community-wide GHG emissions 10 to 15% below 2005 levels by 2020.

Policy 55.1: Implement a comprehensive greenhouse gas reduction plan to reduce communitywide greenhouse gasses through community engagement and leadership; land use, community design, and transportation choices; energy and water conservation techniques; solid waste reduction and building green infrastructure.

Policy 55.2: Emphasize Citrus Heights' role as an environmental steward by conducting City business in a manner that increases community understanding of the healthy and balanced relationships between developed and natural environments.

Policy 55.3: Consult and coordinate with State resource and emergency management agencies regarding updates to climate change science and development of adaptation priorities.

Goal 60: Build greener infrastructure and promote development of a healthy community.

Policy 60.1: Mitigate the urban heat island effect and sequester carbon.

Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan (MTP)/Sustainable Communities Strategy (SCS)

SACOG is designated by the federal government as the Metropolitan Planning Organization (MPO) for the Sacramento region, which requires SACOG to maintain a regional transportation plan that must be updated every four years in coordination with each local government. SACOG is the Regional Transportation Planning Agency (RTPA) for Sacramento, Sutter, Yolo, and Yuba counties. The MTP/SCS is a 20-year multimodal transportation plan that is required to be financially feasible and achieve health and sustainability goals. SACOG's MTP/SCS is federally required to be updated every four years. The SACOG Board adopted the 2020 MTP/SCS and accompanying documents at special board meeting on November 18, 2019.

3.5.3 IMPACTS AND MITIGATION MEASURES

GHG THRESHOLDS OF SIGNIFICANCE AND METHODOLOGY

Analysis Approach

Cumulative impacts (such as GHG impacts) are the collective impacts of one or more past, present, and future projects that, when combined, result in adverse changes to the environment. In determining the significance of a project's contribution to anticipated adverse future conditions, a lead agency should generally undertake a two-step analysis. The first question is whether the *combined* effects from *both* the project *and* other projects would be cumulatively significant. If the agency answers this inquiry in the affirmative, the second question is whether "the project's

incremental effects are cumulatively considerable" and thus significant in and of themselves. The cumulative project list for this issue (climate change) comprises anthropogenic (i.e., human-made) GHG emissions sources across the globe and no project alone would reasonably be expected to contribute to a noticeable incremental change to the global climate. However, legislation and executive orders on the subject of climate change in California have established a statewide context and process for developing an enforceable statewide cap on GHG emissions. Given the nature of environmental consequences from GHGs and global climate change, CEQA requires that lead agencies consider evaluating the cumulative impacts of GHGs. Small contributions to this cumulative impact (from which significant effects are occurring and are expected to worsen over time) may be potentially considerable and, therefore, significant.

The California Office of Planning and Research (OPR) recommends that lead agencies under CEQA make a good-faith effort, based on available information, to estimate the quantity of GHG emissions that would be generated by a project, including the emissions associated with construction activities, vehicular traffic, energy consumption, and area sources: to determine whether the impacts have the potential to result in a significant project or cumulative environmental impact; and, where feasible mitigation is available, to mitigate any project or cumulative impact determined to be potentially significant. In June 2020, the SMAQMD updated its greenhouse gas targets in their *Greenhouse Gas Thresholds for Sacramento County* (June 2020). The following discussion describes the analysis approach as recommended by the SMAQMD.

GREENHOUSE GASES THRESHOLDS OF SIGNIFICANCE

Per Appendix G of the CEQA Guidelines, climate change-related impacts are considered significant if implementation of the Specific Plan under consideration would do any of the following:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Methodology

Greenhouse gases attributable to the construction phase of the Specific Plan would be generated from two primary sources: 1) emissions from off-road construction vehicles used to develop the Specific Plan and 2) emissions from worker, vendor, and hauler vehicle trips and vehicle miles travelled generated during construction activities.

Greenhouse gases attributable to the operational phase of the Specific Plan would be generated from two primary sources: 1) indirect energy (e.g. electricity and natural gas) usage from the Specific Plan and 2) emissions from vehicle trips and vehicle miles travelled generated by the Specific Plan.

To demonstrate consistency with the GHG targets by sector for new developments, the SMAQMD has promulgated updated Greenhouse Gas Thresholds (see the SMAQMD's *Greenhouse Gas*

Thresholds for Sacramento County[1], for detail). For projects with a qualified Climate Action Plan, the project's consistency with such a plan would demonstrate a 'less than significant impact' with regard to GHGs.

However, if a project does not have or comply with a qualified Climate Action Plan, the project is required to implement the SMAQMD's Tier 1 Best Management Practices (BMPs). The SMAQMD's *Greenhouse Gas Thresholds for Sacramento County* identifies that if the proposed project would comply with the Tier 1 BMPs (as described in further detail below), and if overall project emissions are below 1,100 MT CO_2e/year, then the project would have a 'less than significant impact' with regard to GHGs. However, if the project cannot demonstrate overall project emissions below the threshold 1,100 MT CO_2e/year, then the project is also required to also comply with the Tier 2 BMPs (i.e. BMP 3) as promulgated by the SMAQMD.

Based on the updated guidance, the SMAQMD recommends that project proponents commit to a menu of best management practices (BMPs). There are two tiers of BMPs: Tier 1: Required for all projects to avoid conflicting with long-term State goals, and Tier 2: Required for projects that do not screen out of further requirements (e.g., large or inefficient projects). These BMPs may be revised over time to incorporate regulatory or technological advances, and are provided below.

Tier 1: BMPs Required for all projects

- BMP 1: No natural gas: projects shall be designed and constructed without natural gas infrastructure.
- BMP 2: Electric vehicle ready: projects shall meet the current CalGreen Tier 2 standards, except all EV Capable spaces shall instead be EV Ready.[2]

Tier 2: BMP Required for Large or Inefficient projects

- BMP 3: Residential projects shall achieve a 15% reduction in VMT per resident, and office projects should achieve a 15% reduction in VMT per worker compared to existing average VMT per capita for the county, or for the city if a more local SB 743 target has been established. Retail projects should achieve no net increase in total VMT, as required to show consistency with SB 743.

[1] Dated June 1, 2020. See here for the full document: http://www.airquality.org/LandUseTransportation/Documents/SMAQMDGHGThresholds2020-03-04v2.pdf A flow chart describing SMAQMD Greenhouse Gas thresholds is available here: http://www.airquality.org/LandUseTransportation/Documents/Ch6GHGBMPApplicabilityFlowChart9-23-2020.pdf

[2] Note: "EV Capable" spaces are defined by CALGreen Building Code as 'installation of "raceway" (the enclosed conduit that forms the physical pathway for electrical wiring to protect it from damage) and adequate panel capacity to accommodate future installation of a dedicated branch circuit and charging station(s).' "EV Ready" spaces are defined as 'EV Capable plus installation of dedicated branch circuit(s) (electrical pre-wiring), circuit breakers, and other electrical components, including a receptacle (240-volt outlet) or blank cover needed to support future installation of one or more charging stations.'

The City of Citrus Heights does not have a qualified climate action plan or an up-to-date GHG reduction plan. Instead, the project is analyzed in for consistency with the SMAQMD's CEQA guidance (i.e. the SMAQMD's *Greenhouse Gas Thresholds for Sacramento County*). The SMAQMD's CEQA guidance provides that, if the project can demonstrate consistency with the BMPs as promulgated by the SMAQMD (see Tier 1 and Tier 2 BMPS, as provided above), the project would have a less than significant impact on the environment, and would not conflict with any applicable GHG emissions reduction plan, policy, or regulation.

ENERGY CONSERVATION THRESHOLDS OF SIGNIFICANCE

Per Appendix G of the State CEQA Guidelines, the Specific Plan would result in a significant impact on energy use if it would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

In order to determine whether or not the Specific Plan would result in a significant impact relating to energy use, this EIR includes an analysis of project energy use, as provided under *Impacts and Mitigation Measures*, below. A description of the methodology used to estimate energy emissions is provided within the analysis provided under *Impacts and Mitigation Measures*.

IMPACTS AND MITIGATION MEASURES

Impact 3.5-1: Specific Plan implementation would generate GHGs, either directly or indirectly, that would have a significant effect on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases (Significant and Unavoidable)

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. A project's GHG emissions are at a micro-scale relative to global emissions, but could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. Implementation of the Specific Plan would contribute to increases of GHG emissions that are associated with global climate change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO_2 and other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O), from mobile sources and utility usage.

CONSTRUCTION

The Specific Plan's short-term construction-related and long-term operational GHG emissions were estimated using the California Emission Estimator Model (CalEEMod)™ (v.2016.3.2). CalEEMod is a

statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify GHG emissions from land use projects. The model quantifies direct GHG emissions from construction and operation (including vehicle use), as well as indirect GHG emissions, such as GHG emissions from energy use, solid waste disposal, vegetation planting and/or removal, and water use. Emissions are expressed in annual metric tons of CO_2 equivalent units of measure (i.e., MT CO_2e), based on the global warming potential of the individual pollutants. Section 3.2 (Air Quality) provides further detail on the construction phasing and parameters assumed for the purposes of modeling.

Construction-related activities that would generate GHGs include worker commute trips, and off-road construction equipment (e.g., dozers, loaders, excavators). Construction of the land uses in the Specific Plan Area is expected to occur over four phases over approximately 20 years. Annual mitigated construction emissions are summarized in Table 3.5-1, in units of metric tons per year (MT/year).

As presented in the table, short-term annual construction emissions of GHG associated with the Specific Plan are estimated to be a maximum of approximately 1,520.0 MT CO_2e in a single year (year 2027). Construction GHG emissions are a one-time release and are, therefore, not expected to generate a significant contribution to global climate change in the long-term. Since the project would generate greater than 1,100 MT CO_2e (between construction and project operations, as described in further detail below), the Specific Plan would be required to implement the applicable menu of GHG BMPs (i.e. BMPs 1 through 3).

TABLE 3.5-1: SUMMARY OF CONSTRUCTION-RELATED GREENHOUSE GAS EMISSIONS (METRIC TONS/YEAR)

CONSTRUCTION YEAR	BIO-CO_2	NON-BIO CO_2	TOTAL CO_2	CH_4	N_2O	CO_2E
PHASE 1

SOURCE: CALEEMOD (V.2016.3.2)

NOTES: BIO-CO_2 REFERS TO BIOGENIC SOURCES OF CO_2. THE LOSS OF CARBON SEQUESTRATION FROM THE REMOVAL OF EXISTING VEGETATION IS ADDRESSED UNDER THE OPERATIONAL IMPACT DISCUSSION UNDER IMPACT 3.5-2. THE SMAQMD PROVIDES GHG THRESHOLDS ONLY FOR CO_2E, WHICH IS AN AGGREGATE OF ALL GHG EMISSIONS AS EXPRESSED IN TERM OF CO_2.

OPERATION

The Specific Plan is anticipated to be fully developed (i.e., achieve buildout) by approximately 2040. However, partial buildout (completion of Phase 1) is anticipated to occur by 2025. The long-term operational GHG emissions estimate for the project incorporates the Specific Plan's potential area source and vehicle emissions, and emissions associated with utility and water usage, and wastewater and solid waste generation.

Project Operational Characteristics

CalEEMod was used to estimate operational emissions for the Specific Plan. As described in Section 3.2, Air Quality, the Specific Plan would incorporate operational characteristics that would reduce project operational emissions. Additionally, the Specific Plan would adhere to statewide requirements (such as statewide CALGreen Title 24 Energy Efficiency requirements and the recent Governor's Order on electric vehicles, EO-N-79-20) and local requirements (i.e. SMUD's net zero emissions target by 2040) that would further reduce project operational emissions. Moreover, the Specific Plan would include project-specific mitigation that would further project emissions. Lastly, the Specific Plan would be required to implement all feasible SMAQMD BMPs for particulate matter emissions from land use development projects.

The following operational project characteristics would reduce project operational emissions.[3] A summary of the Specific Plan characteristics that were available to be accounted for within the CalEEMod model (as parameters within the model) are provided in the bullet list below (note: the associated CalEEMod measure is provided in brackets below).

- Density of 59.1 dwelling units per acre [Traffic Mitigation LUT-1];
- Diversity through single family residential, multi-family residential, commercial, parks and recreation, and senior uses [Traffic Mitigation, LUT-3];
- Improve destination accessibility (Distance to job center is 13.25 miles) [Traffic Mitigation LUT-4];

[3] This list of project characteristics is derived from the 'Projected Development Scenario', as provided by the project applicant.

- 113 intersections per square mile (17 intersections over an area of 0.15 square miles) [Traffic Mitigation LUT-9];
- Transit accessibility (a bus stop is located on Sunrise Boulevard adjacent to the Plan Area; additional bus stops are located just to the northwest of the Plan Area) – average distance to transit for project residents would be approximately 0.2 miles) [Traffic Mitigation, LUT-5];
- Improve pedestrian network (project site and connecting off-site) [Traffic Mitigation, SDT-1];
- No hearths [Area Mitigation];
- Use low-VOC paint for interiors (50 EF g/L);

It should also be noted that the project plans for the extensive use of shade trees through the Specific Plan Area, which would reduce the urban heat island effect that would be generated by the Specific Plan. In addition, Cool Roofs and Cool Pavement may be used within the Project site. However, these Specific Plan characteristics are not available to be modeled within CalEEMod.

The following statewide and local requirements would reduce further project operational emissions. A summary of the statewide measures (i.e. CALGreen Title 24 Energy Efficiency requirements and the recent Governor's Executive Order on electric vehicles) and local measures (i.e. SMUD's net zero emissions target by 2040) that were available to be accounted for within the CalEEMod model (as parameters within the model) are provided in the bullet list below (note: the associated CalEEMod measure, if applicable, is provided in brackets below).

- Install energy efficient (i.e. LED or better lighting), as required by the 2019 version of CALGreen (for outdoor lighting) [Energy Mitigation, LE-1];
- Install energy efficient *(i.e. Energy Star)* appliances, consistent with the 2019 version of CALGreen [Energy Mitigation, BE-4];
- Install low-flow appliances, as required by the 2019 version of CALGreen (bathroom faucet, kitchen faucet, toilet, and shower) [Water Mitigation, WUW-1]; and
- Use water-efficient irrigation systems (automatic rain shut-off, maximum gallon per minute restriction, WiFi connectivity), as required by the 2019 version of CALGreen [Water Mitigation, WUW-4];
- Governor's Executive Order on electric vehicles, which would require sale only of zero-emission vehicles in California by 2035. This requirement is anticipated to reduce on-road mobile emissions generated by the project by approximately 25%;
- Receive all grid-base electricity from SMUD, which would achieve 100% renewable energy by project buildout [Energy Mitigation, AE-1, AE-2, AE-3].

The Specific Plan would also implement on-site mitigation (as provided under Mitigation Measure 3.2-1), as follows, which would reduce project emissions:[4]

[4] These measures were not available to be modeled in CalEEMod. Therefore, the mitigated operational emissions shown in Tables 3.2-11 through 3.2-13 represent a conservative estimate of the project's

- Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the Planning Manager) at all commercial and public facilities with 50 employees or more;
- Install publicly-available dual post Level 2 charge stations at locations deemed acceptable by the City of Citrus Heights. [Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is a typical traditional home outlet, while Level 2 is a 240 Volt Portable Cordset or Wall-mounted Charging Station (2-10 hours charging)].

Furthermore, the Specific Plan would implement all feasible SMAQMD BMPs for particulate matter emissions from land use development projects. The SMAQMD BMPs are required by existing regulations. The following list identifies the BMPs for operational PM emissions for land use development projects:

- Compliance with District rules that control operational PM and NOx emissions, including SMAQMD Rule 403 (Fugitive Dust). Rule 403 requires the project applicant to implement every reasonable method to control dust emissions. Actions include but are not limited to application of water or chemicals, asphalt, and/or oil depending on the dust-generating activity.
- Compliance with the mandatory measures in the California Building Energy Efficiency Standards (Title 24, Part 6) (i.e. CALGreen) that pertain to efficient use of natural gas for space and water heating and other uses at residential or non-residential land uses.
- Compliance with mandatory measures in the California Green Building Code (Title 24, Part 11). Current mandatory measures related to operational PM include requirements for bicycle parking, parking for fuel-efficient vehicles, electric vehicle charging, and fireplaces for non-residential projects. Residential project measures include requirements for electric vehicle charging and fireplaces.
- Compliance with anti-idling regulations for diesel-powered commercial motor vehicles (greater than 10,000 gross vehicular weight rating). This BMP focuses on non-residential land use projects (retail and industrial) that would attract these vehicles.

The Specific Plan would comply with each of the operational BMPs as promulgated by the SMAQMD for land use development projects.

Project Emissions

Table 3.5-2 provides mitigated operational project emissions at full buildout. As shown in the table, the Specific Plan's mitigated operational GHG emissions at buildout would be approximately 11,211.8 MT CO_2e/year. It should be noted that, for the sake of a conservative analysis, the CalEEMod defaults for natural gas usage (except for hearths) for each land use were utilized for the purposes of modeling.

mitigated emissions, since they do not include quantification of the additional measures included within Mitigation Measure 3.2-2.

TABLE 3.5-2: MITIGATED OPERATIONAL GHG EMISSIONS AT PROJECT BUILDOUT (METRIC TONS/YEAR)

CATEGORY	BIO- CO_2	NON-BIO- CO_2	TOTAL CO_2	CH_4	N_2O	CO_2E
Area	0	20.3	20.3	<0.1	0	20.7

SOURCE: CALEEMOD (V.2016.3.2)

CONSISTENCY WITH THE SMAQMD GHG THRESHOLDS FOR SACRAMENTO COUNTY

The following discussion provides an analysis of the Specific Plan's compliance with the SMAQMD's *Greenhouse Gas Thresholds for Sacramento County* (June 2020).

Best Management Practices (BMPs)

To demonstrate consistency with the GHG targets by sector for new developments, SMAQMD recommends that projects commit to their menu of BMPs. The first tier of BMPs (Tier 1) is required for all projects, to avoid conflicting with the long-term State GHG goals. The second tier of BMPs (Tier 2) is required for projects that do not meet the overall 1,100 MT CO_2e/year threshold (such as this project). The following discussion provides an analysis of the Specific Plan's consistency with these BMPs.

The proposed Specific Plan would implement the Tier 1 BMPs, as feasible. The first BMP within Tier 1 requires projects to be designed and constructed without natural gas infrastructure, or (alternatively) to implement on-site or off-site measures to the maximum extent feasible to reduce (i.e. offset) emissions generated by natural gas. The proposed Specific Plan may include some natural gas infrastructure (e.g. for restaurant uses). Therefore, the proposed project would implement on-site or off-site measures to the maximum extent feasible to reduce (i.e. offset) emissions generated by natural gas. Mitigation Measure 3.5-1 requires individual projects to offset emissions generated by natural gas, through a combination of on-site and/or off-site measures, as feasible. The second BMP within Tier 1 requires that the Specific Plan is electric vehicle ready, consistent with the current CalGreen Tier 2 standards, to ensure that all electric vehicle (EV) capable spaces will be EV Ready. The proposed Specific Plan would comply with this requirement and would implement this requirement as development occurs, as applicable.

In addition, in order to avoid conflicting with the long-term State GHG goals, the second tier of SMAQMD BMPs are required for projects that do not screen out of further requirements, such as projects that meet the OPR's de minimis VMT criteria, and projects that emit less than 1,100 MT CO_2e/year with implementation of BMPs 1 and 2. Since the proposed Specific Plan would exceed the 1,100 MT CO_2e/year threshold requirement, the Specific Plan is also required to implement the second tier of SMAQMD BMPs. Therefore, the proposed Specific Plan would be required to implement BMP 3, which requires residential projects to achieve a 15% reduction in VMT per resident, office projects to achieve a 15% reduction in VMT per worker, and retail projects to achieve

no net increase in total VMT, as required to show consistency with SB 743. The proposed Specific Plan includes residential, office and retail components. As provided under Impact 3.12-1 of Section 3.12: Transportation and Circulation of this EIR, for the Specific Plan Area's census block group, the following data was obtained:

- Persons residing in this census block group generate 13.5 VMT per capita (home-based only);
- Persons employed in this census block group generate 12.9 VMT per capita (home-to-work).

Pages 15 to 16 of the *Technical Advisory* specify that residential and employment projects may be evaluated against a regional average on a VMT per capita basis. The Streetlight Data revealed that the SACOG six-county region has an average VMT per resident of 20.1 miles and an average VMT per worker of 18.1 miles. These regional values lead to the following important conclusions:

- For residential uses, buildout of the Plan Area would be 33 percent below the regional average, as expressed on a VMT per resident basis.
- For employment uses, buildout of the Plan Area would be 29 percent below the regional average, as expressed on a VMT per employee basis.
- For visitors, which are a surrogate for visitation to retail/entertainment uses, visitors to this census block group generate VMT at a level that is 37 percent below the SACOG region average.

Therefore, the Specific Plan would achieve the reductions associated with Tier 2 of the SMAQMD BMPs (i.e. BMP 3).

CONCLUSION

Mitigation Measure 3.5-1 requires the Specific Plan to meet the requirements of BMP 1, as feasible. Additionally, the Specific Plan would meet BMPs 2 and 3, without requiring additional mitigation. Meeting the requirements of the BMPs would ensure that the Specific Plan would avoid conflicting with the long-term State GHG goals, which would ensure that the project would not generate GHG emissions in amounts that would have a significant impact on the environment, or conflict with any applicable GHG emissions reduction plan, policy, or regulation. However, even with implementation of all feasible mitigation, it may not be feasible for all individual projects within the Specific Plan to meet BMP 1 (i.e. either to be designed and construction without natural gas infrastructure, or to fully offset the greenhouse gas emissions generated by the individual project's natural gas usage). Therefore, even with implementation of Mitigation Measure 3.5-1, the Specific Plan's greenhouse gas emissions would be considered to have a ***significant and unavoidable*** impact.

MITIGATION MEASURE(S)

Mitigation Measure 3.5-1: *Prior to the approval of individual phases (i.e. tentative maps, site plan review, etc.), each project applicant shall determine whether their individual project(s) would develop any natural gas infrastructure. If any project applicant would develop natural gas infrastructure for any individual project (such as natural gas connections for cooking uses at a restaurant land use), the project applicant shall demonstrate that the individual project implements*

all feasible on-site and off-site mitigation to offset the equivalent amount of GHG emissions that would be generated from the natural gas infrastructure (i.e. usage of natural gas by the individual project). Mitigation may overlap with the mitigation utilized for Mitigation Measure 3.2-2 (see Section 3.2: Air Quality, for further detail). Mitigation may include but is not limited to:

- *Use natural refrigerants: Projects can participate in SMUD's pilot program to use lower GWP or natural alternates for refrigeration and air conditioning. Natural refrigerants include ammonia, CO_2, or hydrocarbons. To quantify the benefits of this measure, the applicant shall work with SMUD or CARB tools to calculate high-GWP emissions from traditional refrigerants (as these emissions are not typically included in CEQA emissions inventories and would not be added to the unmitigated emissions totals) and then calculate the reduction due to the lower-GWP refrigerants.*
- *Increase vegetation sequestration: Projects can increase carbon sequestration in natural and working lands through planting and management techniques. To quantify the benefits of these commitments, the applicant may use calculational methodology such as CARB's approved offsets protocols, California Climate Initiatives (CCI) tools and calculators, and/or CalEEMod.*
- *Install electric vehicle charging stations: Projects can install EV charging stations in addition to the electrical infrastructure required by BMP 2. To quantify the benefits of this measure, the applicant shall use Project-specific or applicable published literature to calculate the projected amount of charging that will be provided by the chargers, then subtract the indirect emissions from electricity used by the chargers from the gasoline- or diesel-combustion tailpipe emissions that would otherwise be produced by internal combustion-powered vehicles. The applicant shall take care not to double-count GHG reductions with reductions already assumed by the State in its base EV projections.*
- *Solar water heaters and other water heating reductions: Projects can install solar water heaters to replace the need for natural gas or electricity for water heating. Since the unmitigated default to show compliance with BMP 1 is to assume no natural gas, the GHG benefit should be the reduction in electricity that would otherwise be used to heat water.*
- *Increase water and waste reductions beyond regulatory compliance: As described in Section 5.2, projects can demonstrate GHG reductions beyond defaults based on project-specific studies and initiatives and can quantify these reductions using CalEEMod methodology.*
- *Reduce gas- or diesel-powered landscaping equipment use: Project proponents design for reduced landscaping equipment (xeriscaping) or contract with a parks district, city, or homeowners' association to require the use of electric landscaping equipment. To demonstrate GHG reductions would require enforceable mechanisms. For example, the California Electrical Code requires outdoor receptacle outlet(s) to be installed at an accessible level for all new residences; this can enable the use of electric landscaping equipment but does not ensure its use.*

Each mitigation strategy shall be developed with, and approved by, the City of Citrus Heights. Each mitigation strategy is subject to the review and approval of the City of Citrus Heights on a project-by-project basis. The City of Citrus Heights is required to verify each mitigation strategy and its associated reductions to ensure that the associated annual greenhouse gas impacts are reduced to

offset the amount of GHG emissions generated from the natural gas infrastructure, as much as is feasible.

Impact 3.5-2: Specific Plan implementation would not result in the inefficient, wasteful, or unnecessary use of energy resources, or conflict with or obstruct a state or local plan for renewable energy or energy efficiency (Less than Significant)

The State CEQA Guidelines require consideration of the potentially significant energy implications of a project. CEQA requires mitigation measures to reduce "wasteful, inefficient and unnecessary" energy usage (Public Resources Code Section 21100, subdivision [b][3]). The means to achieve the goal of conserving energy include decreasing overall energy consumption, decreasing reliance on natural gas and oil, and increasing reliance on renewable energy sources. In particular, the project would be considered "wasteful, inefficient, and unnecessary" if it were to violate state and federal energy standards and/or result in significant adverse impacts related to project energy requirements, energy inefficiencies, energy intensiveness of materials, cause significant impacts on local and regional energy supplies or generate requirements for additional capacity, fail to comply with existing energy standards, otherwise result in significant adverse impacts on energy resources, or conflict or create an inconsistency with applicable plan, policy, or regulation.

The Specific Plan includes residential, commercial, retail, and institutional development. The amount of energy used at the Plan Area would directly correlate to the number and size of the residential units, the energy consumption of associated unit appliances, outdoor lighting, and energy use associated with other on-site (e.g. commercial) buildings and activities. Other major sources of Specific Plan energy consumption include fuel used by vehicle trips generated during project construction and operation, and fuel used by off-road and on-road construction vehicles during construction. The following discussion provides calculated levels of energy use expected for the Specific Plan, based on commonly used modelling software (i.e. CalEEMod v.2016.3.2 and the California Air Resource Board's EMFAC2017).

ELECTRICITY AND NATURAL GAS

Electricity and natural gas used by the Specific Plan would be used primarily to power on-site buildings. Total annual electricity (kWh) and natural gas (kBTU) usage associated with the operation of the Specific Plan are shown in Table 3.5-3, below (as provided by CalEEMod).[5] The Specific Plan incorporates feasible mitigation to reduce the project's operational electricity consumption. As shown, by project buildout, 100% of the electricity usage within the Plan Area would be generated by renewable sources, since SMUD has a goal of 100% renewable energy generation by year 2030, and is on track to meet that goal.

According to CalEEMod's *Appendix A: Calculation Details for CalEEMod*, CalEEMod uses the California Commercial End Use Survey (CEUS) database to develop energy intensity value for non-

[5] It should be noted that, for the sake of a conservative analysis, default CalEEMod assumptions for natural gas were utilized for the purposes of modeling. However, it is anticipated that, in reality, natural gas usage would be much lower than that as shown in Table 3.5-3.

residential buildings. The energy use from residential land uses is calculated based on the Residential Appliance Saturation Survey (RASS). Similar to CEUS, this is a comprehensive energy use assessment that includes the end use for various climate zones in California.

TABLE 3.5-3: PROJECT OPERATIONAL NATURAL GAS AND ELECTRICITY USAGE

LAND USE	*ELECTRICITY (KWH/YEAR) - MITIGATED*	*NATURAL GAS (KBTU/YEAR) - MITIGATED*
Apartments Mid Rise	4,310,140	10,479,270
Retirement Community	80,772	183,120
Day-Care Center	405,339	1,777,000
Fast Food Restaurant with Drive Thru	2,417,380	2,305,600
General Office Building	9,614,570	9,170,000
General Office Building	453,258	432,300
Government (Civic Center)	1,621,360	7,108,000
High Turnover (Sit Down Restaurant)	5,990,070	25,481,700
Hotel	314,857	787,820
Movie Theater (No Matinee)	2,391,500	10,484,300
Quality Restaurant	1,340,780	688,340
Regional Shopping Center	561,846	1,512,340
Total	**29,501,872**	**70,409,790**

SOURCE: CALEEMOD (V.2016.3.2)

As shown in Table 3.5-3, Specific Plan operational energy usage would be reduced with implementation of Specific Plan components considered mitigation by CalEEMod (note: given the limited mitigation options available in the current version of CalEEMod, the reduction attributable to mitigation represents a conservative analysis). As described under Mitigation Measure 3.2-1 (see Section 3.2, Air Quality), the Specific Plan incorporates feasible mitigation that would reduce the Specific Plan's energy consumption, as compared to the unmitigated scenario. These reductions in overall project energy usage also reflect a reduction in the project's energy intensity.

ON-ROAD VEHICLES (OPERATION)

The Specific Plan would generate vehicle trips during its operational phase. Based on the traffic study prepared for the project (Fehr & Peers, 2020), the Specific Plan would generate a net increase of approximately 28,699 vehicle trips. In order to calculate operational on-road vehicle energy usage and emissions, default trip lengths generated by CalEEMod were used, which are based on the project location and urbanization level parameters selected within CalEEMod (i.e. "Sacramento County" and "Urban", respectively). These values are provided by the individual districts or a default average is used for the state, depending on the location of the project (CAPCOA, 2017). The Specific Plan would generate a total of approximately 200,084 average daily vehicle miles travelled (average daily VMT). Using fleet mix data provide by CalEEMod (v2016.3.2), and Year 2040 gasoline and diesel MPG (miles per gallon) factors for individual vehicle classes as provided by EMFAC2017, weighted MPG factors for operational on-road vehicles of approximately 39.7 MPG for gasoline and 11.3 MPG for diesel vehicles were derived. With this information, as a conservative estimate, it was calculated that the unmitigated Specific Plan would generate vehicle trips that would use a total of approximately 4,718 gallons of gasoline and 1,121 gallons of diesel fuel per day, on average, or

1,722,057 gallons of gasoline and 409,013 annual gallons of diesel fuel per year.

ON-ROAD VEHICLES (CONSTRUCTION)

The Specific Plan would also generate on-road vehicle trips during Specific Plan construction (from construction workers and vendors). Estimates of vehicle fuel consumed were derived based on the assumed construction schedule, vehicle trip lengths and number of workers for Phase 1 (as a proxy for the other construction phases) as provided by CalEEMod (v 2016.3.2), and Year 2020 gasoline and diesel MPG factors provided by EMFAC2017. Table 3.5-4, below, describes gasoline and diesel fuel used by on-road mobile sources during Phase 1 of the construction schedule. As shown, the vast majority of on-road mobile vehicle fuel used during the construction of the Specific Plan would occur during the building construction phase. See Appendix B of this EIR for a detailed calculation.

TABLE 3.5-4: ON-ROAD MOBILE FUEL GENERATED BY PROJECT CONSTRUCTION ACTIVITIES – BY PHASE

CONSTRUCTION PHASE	*TOTAL DAILY WORKER TRIPS[A]*	*TOTAL DAILY VENDOR TRIPS[A]*	*TOTAL DAILY HAULING TRIPS[A]*	*GALLONS OF GASOLINE FUEL[B]*	*GALLONS OF DIESEL FUEL[B]*
PHASE 1					
Demolition	15	0	1,279	120	34,647
Site Preparation	18	0	0	72	0
Building Construction	384	108	0	8,303	7,929
Paving	15	0	0	120	0
Architectural Coating	77	0	0	1,723	0

NOTE: [A] PROVIDED BY CALEEMOD. [B]SEE APPENDIX B FOR FURTHER DETAIL

SOURCE: CALEEMOD (V.2016.3.2); EMFAC2017.

OFF-ROAD VEHICLES (CONSTRUCTION)

Off-road construction vehicles would use diesel fuel during the construction phase of the project. A non-exhaustive list of off-road constructive vehicles expected to be used during the construction phase of the project includes: cranes, forklifts, generator sets, tractors, excavators, and dozers. Based on the total amount of CO_2 emissions expected to be generated by the project (as provided by the CalEEMod output), and a CO_2 to diesel fuel conversion factor (provided by the U.S. Energy Information Administration), the Specific Plan would use a total of approximately 5,887 gallons of diesel fuel for off-road construction vehicles (during the demolition and site preparation phases of the Specific Plan). Detailed calculations are provided in Appendix B of this EIR.

The Specific Plan could also use other sources of energy not identified here. Examples of other energy sources include alternative and/or renewable energy (such as solar PV) and/or on-site stationary sources (such as on-site diesel generators) for electricity generation. The Specific Plan would introduce solar PV onto residential rooftops, based on California Building Code requirements, which would greatly reduce the need for fossil fuel-based energy (for project buildings), including for electricity.

CONCLUSION

The Specific Plan would use energy resources for the operation of project buildings (i.e., electricity), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the Specific Plan, and from off-road construction activities associated with the project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The Specific Plan would be responsible for conserving energy, to the extent feasible, and relies heavily on reducing per capita energy consumption to achieve this goal, including through Statewide and local measures.

The Specific Plan would be in compliance with all applicable federal, state, and local regulations regulating energy usage. For example, SMUD is responsible for the mix of energy resources used to provide electricity for its customers, and is in the process of implementing the Statewide Renewable Portfolio Standard (RPS) to increase the proportion of renewable energy (e.g., solar and wind) within its energy portfolio. SMUD is expected to achieve at least a 40% mix of renewable energy resources by 2030. Additionally, energy-saving regulations, including the latest State Title 24 building energy efficiency standards ("part 6"), would be applicable to the Specific Plan. Other Statewide measures, including those intended to improve the energy efficiency of the statewide passenger and heavy-duty truck vehicle fleet (e.g. the Pavley Bill and the Low Carbon Fuel Standard), would improve vehicle fuel economies, thereby conserving gasoline and diesel fuel. These energy savings would continue to accrue over time. Furthermore, as described previously, the Specific Plan would incorporate mitigation that would further reduce energy consumption.

As a result, the Specific Plan would not result in any significant adverse impacts related to Specific Plan energy requirements, energy use inefficiencies, and/or the energy intensiveness of materials by amount and fuel type for each stage of the project including construction, operations, maintenance, and/or removal. SMUD, the electricity provider to the site, maintains sufficient capacity to serve the Specific Plan. The Specific Plan would comply with all existing energy standards, including those established by Citrus Heights, as described under Impacts 3.5-1 through 3.5-3, previously, and would not result in significant adverse impacts on energy resources. For these reasons, the Specific Plan would not be expected cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a state or local plan for renewable energy or energy efficiency. This is a ***less than significant*** impact.

This page left intentionally blank.

The purpose of this section is to disclose and analyze the potential impacts associated with hazards and hazardous materials related to the Specific Plan Area and general vicinity, and to analyze the potential for exposure of people to hazards and hazardous materials as the Plan Area is built and operated in the future. This section is based in part on the following:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Search (United States Environmental Protection Agency [EPA], 2020).
- Envirostar database search (California Department of Toxic Substances Control [DTSC], 2020);
- GeoTracker Information System and Geographic Environmental Information Management System database search (State Water Resources Control Board [SWRCB], 2020);
- National Priorities List (NPL) of Superfund Sites and Proposed NPL Sites (United States EPA], 2020);
- Federal Emergency Management Agency Flood Insurance Rate Maps (2020);
- *Phase I Environmental Site Assessment – Sunrise Tomorrow Property* (Wallace-Kuhl & Associates [WKA], November 2020);
- *Sacramento Countywide Local Hazard Mitigation Plan Update* (Sacramento County, December 2016);
- Toxics Release Inventory (TRI) Program database search (United States EPA], 2020).

Comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic from the Department of Toxic Substances Control (August 26, 2020). The portion of the comment related to this topic is addressed within this section.

As discussed in the Initial Study (see Appendix A), impacts associated with airports, private air strips, and wildland fires would be ***less than significant***. Additionally, the Plan Area is not located within a very high fire hazard severity zone; therefore, the thresholds associated with the Plan Area's proximity to state responsibility areas or lands classified as very high fire hazard severity zones are not applicable to the Specific Plan and there is no impact associated with these thresholds. As such, these CEQA topics are not relevant to the Specific Plan and will not be addressed further.

3.6.1 ENVIRONMENTAL SETTING

PHYSICAL SETTING

The City of Citrus Heights is located just south of Placer County within northeast Sacramento County, California. The unincorporated communities of Fair Oaks, Carmichael, Gold River, Orangevale, Antelope, Foothill Farms, and North Highlands surround the City, along with unincorporated industrial and agricultural areas. The City of Roseville is located immediately to the north, the City of Rancho Cordova is located approximately 3 miles to the south, and the City of

Folsom is located approximately 6 miles to the east. The City is located within the Sacramento Valley, and is underlain primarily by Holocene and Pleistoceneage alluvium, and composed primarily of sediments from the Sierra Nevada and Coast Ranges (City of Citrus Heights 2011a, 2011b).

Project Location

The 95.8-acre Specific Plan Area is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California. The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID), which is the ten-block area of the City along Greenback Lane between Birdcage Street and Fair Oaks Boulevard and along Sunrise Boulevard between Madison Avenue and just north of Arcadia Drive (City of Citrus Heights, 2011).

Existing Site Uses

The Plan Area is developed with the Sunrise Mall, totaling 1,400,000 square feet (sf) of existing building area and 6,400 parking spaces. The Plan Area contains seven parcels developed with various structures and parking facilities for a range of uses, including auto repair shops, restaurants, banks, and retail spaces. The *Phase I Environmental Site Assessment (ESA)* performed for the Plan Area (see Appendix F) identified the existing developments and occupants within the Plan Area. Table 3.6-1 provides details regarding the existing development found in each parcel of the Plan Area.

TABLE 3.6-1: EXISTING DEVELOPMENT IN THE PLAN AREA

PARCEL ID	*ACREAGE*	*DEVELOPMENT*	*OCCUPANT*
A	2.80	One structure and parking area	US Bank
B	12.36	Two structures and parking area	South-central structure: Macy's Northeastern structure: Goodyear
C	18.10	Two structures and parking area	Western structure: JC Penney Eastern structure: Firestone Auto Center
D	3.21	One structure and parking area	Red Robin Restaurant
E	25.36	Two structures and parking area	Western structure: vacant restaurant Eastern structure: Sunrise Mall
F	12.71	One structure and parking area	Macy's
G	21.27	Three structures and parking area	All structures are vacant. One structure was formerly a Sears Auto Center

SOURCE: WALLACE KUHL & ASSOCIATES, NOVEMBER 2020.

Existing Surrounding Uses

The Plan Area is located in a highly urbanized and commercial area of Citrus Heights. The Citrus Town Center and Marketplace at Birdcage shopping centers, consisting of various big box commercial vendors, retail, grocery store, and restaurant uses are located to the north and west of the Plan Area, respectively. In addition, to the north of the Plan Area past the Citrus Town Center includes the 56-acre Mitchell Farms Subdivision, which was approved in August 2018 to convert the Sunrise Golf and Disc Golf into a 260 single-family residential subdivision divided into five villages separated with open space buffers. The Plan area is also bordered on the south and east

by a mix of residential uses, including single-family homes and apartment complexes. Additionally, various commercial and office uses are located to the south of the Plan Area, along Sunrise Boulevard and to the east along Greenback Lane.

Site Topography

The elevation of the site ranges from approximately 170 feet to 190feet above mean sea level (MSL).

Site Soils

A Custom Soil Survey was completed for the Specific Plan Area using the Natural Resources Conservation Service (NRCS) Web Soil Survey program. The NRCS Soils Map is provided in Figure 3.4-1 in Section 3.4, Geology and Soils. Table 3.6-2 identifies the type and range of soils found in the Plan Area.

TABLE 3.6-2: SPECIFIC PLAN AREA SOILS

UNIT SYMBOL	*NAME*	*ACRES IN SPECIFIC PLAN AREA*	*PERCENT OF SPECIFIC PLAN AREA*
227	Urban Land	94.79	98.9%
229	Urban land-Xerarents-Fiddyment complex	1.01	1.1%

SOURCE: NRCS CUSTOM SOIL SURVEY 2020.

HAZARDS ASSESSMENT

For the purposes of this EIR, "hazardous material" is defined as provided in California Health & Safety Code, Section 25501:

- Any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment.

"Hazardous materials" include, but are not limited to, hazardous substances, hazardous waste, and any material that a handler or the administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.

"Hazardous waste" is a subset of hazardous materials. For the purposes of this EIR, the definition of hazardous waste is essentially the same as that in the California Health & Safety Code, Section 25517, and in the California Code of Regulations (CCR), Title 22, Section 66261.2:

- Hazardous wastes are wastes that, because of their quantity, concentration, physical, chemical, or infectious characteristics, may either cause, or significantly contribute to, an increase in mortality or an increase in serious illness, or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

CCR Title 22 categorizes hazardous waste into hazard classes according to specific characteristics of ignitibility, corrosivity, reactivity, or toxicity. Hazardous waste with any of these characteristics is also known as a Resource Conservation and Recovery Act (RCRA) waste.

Hazardous materials can be categorized as hazardous non-radioactive chemical materials, radioactive materials, toxic materials, and biohazardous materials. The previous definitions are adequate for non-radioactive hazardous chemicals. Radioactive and biohazardous materials are further defined as follows:

- Radioactive materials contain atoms with unstable nuclei that spontaneously emit ionizing radiation to increase their stability.
- Radioactive wastes are radioactive materials that are discarded (including wastes in storage) or abandoned.
- Toxic wastes are harmful or fatal when ingested or absorbed (e.g., containing mercury, lead). When toxic wastes are land disposed, contaminated liquid may leach from the waste and pollute groundwater.
- Biohazardous materials include materials containing certain infectious agents (microorganisms, bacteria, molds, parasites, and viruses) that cause or significantly contribute to increased human mortality or organisms capable of being communicated by invading and multiplying in body tissues.
- Medical wastes include both biohazardous wastes (byproducts of biohazardous materials) and sharps (devices capable of cutting or piercing, such as hypodermic needles, razor blades, and broken glass) resulting from the diagnosis, treatment, or immunization of human beings, or research pertaining to these activities.

There are countless categories of hazardous materials and hazardous wastes that could be found on any given property based on past uses. Some common examples include agrichemicals (chlorinated herbicides, organophosphate pesticides, and organochlorine pesticides, such as Mecoprop [MCPP], Dinoseb, chlordane, dichloro-diphenyltrichloroethane [DDT], and dichloro-diphenyl-dichloroethylene [DDE]), petroleum based products (oil, gasoline, diesel fuel), a variety of chemicals including paints, cleaners, and solvents, and asbestos-containing or lead-containing materials (e.g., paint, sealants, pipe solder).

“Recognized Environmental Conditions” is one of the terms used to identify environmental liability within the context of a Phase I ESA. The American Society for Testing and Materials (ASTM) defines the recognized environmental condition in the E1527-13 standard as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

Site Reconnaissance

According to the *Phase I ESA* (see Appendix F), site reconnaissance was conducted on October 8, 9, 16, and 20, 2020 to observe the existing site conditions at each parcel. Figure 3.6-1a provides an aerial of the Plan Area that identifies the parcel boundaries and sensitive hazardous areas.

PARCEL A

Parcel A is developed with one structure occupied by a US Bank and parking areas. Access was not provided to the US Bank during the site reconnaissance; therefore, the existing conditions within the structure could not be identified.

PARCEL B

Parcel B is developed with a structure that is attached to the main Sunrise Mall Building and occupied by Macy's. WKA was escorted by the store manager to the elevator room where staining on the concrete floor beneath the elevator machine was present; however, no cracks were observed in the concrete floor.

The second structure on Parcel B is on the northeastern portion of the parcel and is occupied by the Goodyear Tire store. Areas to the north, east, south, and west of the structure were marked for an Underground Service Alert (USA) and labeled "Penecore" – a local drilling company. In each of the USA areas, a patched area was observed that appeared to be a boring location. Additionally, an oil/water separator to the east of the structure was observed. Hazardous materials, including waste oil, waste oil filters, and waste anti-freeze, are stored in an enclosure to the west of the structure, which also contained a 180-gallon waste oil aboveground storage tank (AST). The interior of the structure consists of a customer lobby in the structure consists of a customer lobby in the northern portion and a service area and storage in the southern portion. Seven hydraulic lifts were observed in the service area, including six lifts with aboveground hydraulic fluid tanks and one tank with an underground hydraulic oil tank. Additionally, markings were observed on the floor of the service area that would indicate that the hydraulic lifts had been replaced in the past, which were likely lifts with underground hydraulic oil tanks. Eleven 55-gallon drums of new oil, other vehicle fluids in the retail sized containers, parts, and tires were located in the storage area of the building.

PARCEL C

Parcel C is developed with a structure on the western portion occupied by JC Penney, a Firestone Auto Center on the eastern portion, and parking areas. While access was provided to the Firestone Auto Center, it should be noted access was not provided to the JC Penney structure.

On the western side of the Firestone Auto Center, concrete islands with concrete square patches were observed under a canopy area that are believed to be the location of former fueling dispensers. One of the concrete patches was dated 1984. Additionally, an oil/water separator is located adjacent to the east of the Firestone Auto Center structure. The Firestone Auto Center includes sixteen hydraulic lifts located within the service area and four of the lifts may have

underground hydraulic tanks. Additionally, six 110-gallon plastic totes containing new oil are located in the central portion of the service area. Hazardous waste is stored in the southwestern portion of the service area, which has a concrete floor.

PARCEL D

Parcel D is developed with a Red Robin Restaurant and parking area. Access was not provided to the Red Robin facility during the site reconnaissance.

PARCEL E

Parcel E is developed with a vacant restaurant building on the western portion, the main Sunrise Mall building on the eastern portion, and parking areas. The main Sunrise Mall Structure is subdivided into multiple tenant spaces, with the majority of suites in the southern portion of the mall being vacant. Access was provided to multiple locations on the exterior of the mall where Sacramento Municipal Utility District (SMUD) equipment is stored. The SMUD Equipment areas were clean and orderly, with the exception of area "6047", which contained unknown substances stored in containers. The concrete beneath these containers was stained; however, it appeared to be in good condition with no cracking.

PARCEL F

Parcel F is developed with one structure attached to the main mall building, which is occupied by Macy's. Access was provided to the elevator room and emergency generator area. No evidence of leaking, such as stained floors, were observed in the elevator room. The emergency generator was located in the loading dock adjacent to the north of the structure. A 60-gallon diesel AST was located in the vicinity of the emergency generator; however, no evidence of leaks, such as staining, was observed in the vicinity of the AST.

PARCEL G

Parcel G is developed with three vacant, commercial structures and associated parking areas. The three structures were previously occupied by Sears and all include basements. The northwestern structure is attached to the main building, which has two stories aboveground. The southern-most structure was formerly occupied by a Sears Auto Service Center facility. Within the former Sears Auto Service Center facility, four square metal plates were observed in the western portion of the building; however, these metal plates could not be removed, so the nature of the feature is unknown. In the eastern portion of the building, a vapor monitoring well was identified, which was used to evaluate an oil/water separator. The service area of the Sears Auto Service Center facility contained 10 empty bays; however, the locations of former hydraulic lifts were visible. Each service bay appeared to have a hydraulic lift, which extended into the basement. An enclosed hazardous waste storage area was identified outside of the facility along the eastern exterior. No evidence of leaks, such as staining, within the enclosed hazardous waste storage area was observed.

Historical Use Information

Historical information was reviewed to develop a history of the previous uses on the Specific Plan and surrounding area, in order to evaluate the Plan Area and adjoining properties for evidence of Recognized Environmental Conditions. Standard historical sources reviewed during the preparation of the *Phase I ESA* included the following, as available: Aerial Photographs, Environmental Records, and Databases.

AERIAL PHOTOGRAPHS

The *Phase I ESA* included a review of historical aerial photographs of the Plan Area and general vicinity, covering the years 1937, 1947, 1957, 1964, 1966, 1972, 1984, 1993, 2006, 2009, 2012, and 2016. The Plan Area was vacant, grass-covered land from at least 1937 to at least 1966 and has been developed with the Sunrise Mall since at least 1972.

Parcel A: Parcel A has been developed with one structure and associated parking areas, since at least 1972; no significant changes are noted after 1972.

Parcel B: Parcel B has been developed with two structures, one on the south-central portion and one on the northeastern portion, and associated parking areas since at least 1972; no significant changes are noted after 1972.

Parcel C: Parcel C has been developed with two structures, one on the western portion and one on the eastern portion, and associated parking areas since 1972; no significant changes are noted after 1972.

Parcel D: In 1972, two structures and associated parking areas appear under construction on Parcel D, including one on the northern portion and a second structure on the southern portion. The structure on the northern portion appears to be demolished by 1993 with a new structure built by 2006. Additionally, the structure on the southern portion of the parcel appears to be demolished by 2016.

Parcel E: In 1972, one existing structure is visible and a second on the western portion is undergoing construction on Parcel E; no significant changes are noted after 1972.

Parcel F: In 1972, the existing structure and parking lot are visible; no significant changes are noted after 1972.

Surrounding Areas: In 1937, the majority of the surrounding area is grass-covered land with the exception of land to the north of Greenback Lane, which appears developed with an orchard/vineyard and two structures, and land to the south, which appears developed with an orchard and farmstead. In 1957, the previously noted orchards and vineyards have been removed to the north and a new structure, which appears to be a gas station, is visible to the northwest. In 1964, Sunrise Boulevard is visible, which runs contiguous with the western boundary of the Plan Area, and a gas station appears north of the Plan Area. By 1984 the existing shopping center to the north and west is visible and the existing residential structures to the south appear. Additionally, an existing commercial-type structure and residential structure are visible in 1984 and by 1993 two

additional commercial-type structures are visible to the east. In 2006, additional structures are visible to the west. Additionally, a structure on the northeastern portion of the parcel to the west has been removed and cleared land is visible and by 2009 a structure is developed in its place. No significant changes are noted after 2009.

ENVIRONMENTAL RECORDS AND DATABASES

The *Phase I ESA* (see Appendix F) includes a search of local, state, and federal agency databases for the Plan Area and known contaminated sites in the vicinity. Table 3.6-3 summarizes the researched ASTM required *Standard Environmental Record Sources*, as well as several *Additional Environmental Record Sources*, as defined in Sections 8.2.1 and 8.2.2 of the ASTM Standard. It should be noted that there is the potential for numerous redundancies among these various database listings.

SOURCE: WALLACE KUHL & ASSOCIATES, NOVEMBER 2020.

National Priorities List: The National Priorities List (NPL) of Superfund Sites and Proposed NPL Sites is EPA's database of more than 1,200 sites designated or proposed for priority cleanup under the Superfund program. NPL sites may encompass relatively large areas. As shown in Table 3.6-3, the Plan Area is not listed in this database.

RCRIS System: The Resource Conservation and Recovery Information System (RCRIS) is an EPA database that includes selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Identification on this list does not indicate that there has been an impact on the environment. As noted in Table 3.6-3, there are seven listings on the Federal RCRA Small Quantity Generators List in the Plan Area and adjoining areas, as well as three listings on the Federal RCRA Large Quantity Generators List.

CERCLIS Data: Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) is an EPA database that contains information on potential hazardous waste sites that have been reported to the EPA by states, municipalities, private companies, and individuals, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites that are either proposed for or on the NPL, as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. As shown in Table 3.6-3, the Plan Area is not listed in this database.

CORRACTS: Corrective Action Report (CORRACTS) is an EPA database that identifies hazardous waste handlers with RCRA corrective action activity. As shown in Table 3.6-3, the Plan Area is not listed in this database.

Cortese Database: The Cortese database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is known hazardous

substance migration. The source of this database is the California Environmental Protection Agency (Cal-EPA) and are found in the GeoTracker database. As shown in Table 3.6-3, the Plan Area is not listed in this database; however, there are seven listings within 0.5 miles of the Plan Area.

GeoTracker: GeoTracker is the State Water Resources Control Board's (SWRCB's) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks (USTs). GeoTracker has replaced past databases, such as the Leaking Underground Storage Tank Information System (LUSTIS) and the Underground Storage Tank (UST) database. As noted in Table 3.6-3, there are eight Permitted USTs located in the Plan Area and adjoining areas. Additionally, there are nine State Leaking Underground Storage Tanks within 0.5 miles of the Plan Area.

Envirostor: The DTSC maintains the *Envirostor Data Management System*, which provides information on hazardous waste facilities (both permitted and corrective action) as well as any available site cleanup information. There are no sites listed in the database within the Plan Area. The nearest Envirostor site, the All Seasons Cleaners (ID: 60001849), is located approximately 2.51 miles southwest of the Plan Area and is an Evaluation Site with a status of Inactive – Needs Evaluation.

EPA Toxic Release Inventory: The EPA Toxic Release Inventory (TRI) does not list data on disposal or other releases of toxic chemicals in the Specific Plan (USEPA, 2017). The nearest TRI site, Agilent Technologies Inc, is located in the City of Folsom approximately 4.4 miles southeast of the Plan Area.

National Pipeline Mapping System: The Pipeline and Hazardous Materials Safety Administration's online National Pipeline Mapping System (NPMS) website contains pipeline information. Based on a search of the PHMSA/NPMS data, the *Phase I ESA* identified one pipeline approximately 0.5 miles south of the Plan Area, which is reportedly operated by PG&E and used for the transmission of natural gas.

Solid Waste Information System: The Solid Waste Information System (SWIS) is a database of solid waste facilities that is maintained by the California Integrated Waste Management Board (CIWMB). The SWIS data identifies active, planned and closed sites. As noted in Table 3.6-3, there are no active or planned solid waste facilities listed in the database within 0.5 miles of the Plan Area.

PADS System: PCB Activity Database System (PADS) is an EPA database that identifies generators, transporters, commercial storers, and/or brokers and disposers of polychlorinated biphenyls (PCBs) who are required to notify EPA of such activities. The Plan Area is not listed in this database.

DTSC Haznet database: The Department of Toxic Substances Control (DTSC) Haznet database is a list of all facilities that have submitted manifests for the disposal of hazardous waste at a landfill. As shown in Table 3.6-3, 157 listings were identified on the DTSC Haznet database within 0.25 miles of the Plan Area, including four within the Plan Area. A listing on this database is not

considered to be indicative of a release of a hazardous material or petroleum product at a property.

California Environmental Reporting System Hazardous Waste: The California Environmental Protection Agency's California Environmental Reporting System Hazardous Waste System (CERS Haz Waste) database lists all facilities categorized as Hazardous Chemical Management, Hazardous Waste On-site Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA Large Quantity Hazardous Waste Generator Program. As identified on Table 3.6-3, 32 listings were identified on the CERS Haz Waste within 0.25 miles of the Plan Area. A listing on this database is not considered to be indicative of a release of a hazardous material or petroleum product at a property.

Sacramento County Master List database: The Sacramento County Master List is a database of all facilities that are regulated, permitted, and/or inspected by the Sacramento County Environmental Management Department (EMD). As shown in Table 3.6-3, 109 listings were identified on the Sacramento County Master List database within 0.25 miles of the Plan Area, including three listings located within the Plan Area. A listing on this database is not considered to be indicative of a release of a hazardous material or petroleum product at a property.

Sacramento County Contaminated Site List: The Sacramento County Environmental Management Department (EMD) maintains the Site Assessment and Mitigation Program, also referred to as the Toxic Site Cleanup Program. The Toxic Site Cleanup Program maintains a contaminated site list and provides mandated regulatory oversight of the assessment and remediation of properties on which there has been a release of hazardous materials to soil and/or groundwater. As shown in Table 3.6-3, seven listings were identified within 0.25 miles of the Plan Area, including one within the Plan Area.

Hazardous Material Sites

As noted above, the State of California Hazardous Waste and Substances Site List (also known as the "Cortese List") is a planning document used by the state, local agencies, and developers to comply with the California Environmental Quality Act (CEQA) requirements for providing information about the location of hazardous materials sites. Government Code Section 65962.5 requires Cal EPA to annually update the Cortese List. DTSC is responsible for preparing a portion of the information that comprises the Cortese List. Other state and local government agencies are required to provide additional hazardous material release information that is part of the complete list.

The *Phase I ESA* (see Appendix F) identified ten facilities within and adjacent to the Plan Area that are listed on federal, state, and local hazardous materials databases. The following summaries the information for these facilities and their potential to impact the Plan Area:

THE GOODYEAR CENTER

The Goodyear Tire Center, 7986 Greenback Lane, is located on Parcel B. The facility is listed on the CERS Haz Waste, CERS Tanks, DTSC Haznet, and Sacramento County Master List databases. As part

of the *Phase I ESA* (see Appendix F), documents on the Sacramento County EMD NextRequest website were reviewed for the facility. The most recent inspection report for the facility was dated September 28, 2016, and no violations were noted. Additionally, no records were located that indicated that the facility had any underground storage tanks for waste oil or fuel in the past. Based on the information reviewed, no additional concerns were noted; however, the historical operation of the automotive repair facility is considered an REC.

SKY CLEANERS FACILITY

The Sky Cleaners facility, 6186 Sunrise Mall, occupied a suite of a multi-tenant commercial structure located on the southern portion of Parcel D within the Plan Area, which was demolished by 2016. The facility is listed on US EPA Drycleaners, Sacramento County Master List, DTSC Haznet, and CERS databases. As part of the *Phase I* ESA (see Appendix F), inspection reports were reviewed for the facility dated between 1988 and 2000 on the Sacramento County EMD website. The inspection reports indicate that tetrachloroethylene was used by the facility. No assessment reports were available from the Sacramento County EMD.

As part of the *Phase I ESA* (see Appendix F), WKA reviewed previous Phase I ESAs and Phase II ESAs prepared for the Sky Cleaners facility to determine if the facility has the potential to impact future uses in the Plan Area. A previous Phase I ESA, dated January 17, 2008, prepared by IVI Due Diligence Services (IVI) documented a previous soil sampling investigation of the Sky Cleaners facility in October 2004. No groundwater was encountered during the previous soil sampling investigation and no groundwater samples were collected. Laboratory analysis of soil samples indicated that "trace concentrations of tetrachloroethylene, MEK, and acetone significantly below cleanup levels were found within the soil borings." Given that Sky Cleaners operated for three additional years following the 2004 soil sampling investigation, IVI prepared a Limited Phase II ESA, dated March 4, 2008, to address concerns of on-site soil contamination. The previous Limited Phase II ESA analyzed three soil borings at the suite that was previously occupied by Sky Cleaners. Laboratory analysis of a soil sample collected from the former waste storage area indicated a tetrachloroethylene concentration of 0.014 milligrams per kilogram (mg/kg), which was below the US EPA Region 9 Preliminary Remediation Goal of 0.48 mg/kg. Therefore, based on a review of previous assessments prepared by IVI, the *Phase I ESA* concluded that this facility has not impacted the Plan Area and would not impact future uses.

FIRESTONE STORE #35C

The Firestone Store #35C, 6102 Sunrise Mall, is located on the eastern portion of Parcel C. The facility is listed on the DTSC Haznet, Sacramento County Master List, and Historical Underground Storage Tank (UST) databases. As part of the *Phase I* ESA (see Appendix F), records on the Sacramento County EMD NextRequest website were reviewed for the facility. The earliest available document for the facility is a Hazardous Substance Storage Statement, dated June 8, 1984, which indicates that an underground waste oil tank was present; however, no information regarding the installation date or capacity was provided. According to a Sacramento County EMD Consolidated Application for Authority to Remove Underground Storage Tanks a 550-gallon underground waste oil storage tank was removed from the facility. A Sacramento County EMD

inspector that observed the removed tank noted that "no apparent evidence of contamination" was observed. No soil samples were collected from the location of the waste oil tank. Based on the information reviewed, concerns are noted from the lack of assessment of the location of the waste oil tank. Additionally, the historical operation of the automotive repair facility is considered an REC.

SEARS AUTO CENTER #6799 FACILITY

The Sears Auto Center #6799 facility, 5900 Sunrise Boulevard, is located on Parcel G. The facility is listed on State Water Resources Control Board's (SWRCB) LUST, DTSC Haznet, and Sacramento County Contaminated Sites databases. According to the *Phase I ESA* (see Appendix F), a previous Phase II ESA Report, dated April 13, 2015, was prepared by Terrcon Consultants, Inc. (Terracon) for the facility, which indicated three 10,000-gallon gasoline underground storage tanks USTs, one 1,000-gallon waste oil UST, dispenser island, and product lines were removed from the facility between the 1980s and 1994. The facility received a no further action status from Sacramento County EMD. Additionally, Terracon reported that one hydraulic lift was present and eight hydraulic lifts had been removed. The shafts of the hydraulic lifts extended into a basement and not into subsurface soils; therefore, no further investigation of them was warranted.

According to the *Phase I ESA* (see Appendix F), Terracon also previously reported that an oil/water separator was observed to the north of the auto center building. Terracon performed the previous Phase II ESA to evaluate potential impacts from the oil/water separator. One soil boring was installed to the north of the oil/water separator to a depth of 40 feet below ground surface. Soil samples were collected at three depths and a groundwater sample was collected for laboratory analysis. The samples were submitted for analysis of volatile organic compounds and total petroleum hydrocarbons. Laboratory analysis of the soil samples indicated that petroleum hydrocarbons were not present above laboratory reporting limits. Laboratory analysis of the groundwater sample indicated that total petroleum hydrocarbon – diesel range organics (TPH-DRO) were detected at a concentration of 0.15 milligrams per liter (mg/L), which exceeded the San Francisco Bay Regional Water Quality Control Board's (SFBRWQCB) Environmental Screening Level (ESL) of 0.10 mg/L. Total petroleum hydrocarbons oil range organics (TPH-ORO) was detected at a concentration of 0.20 mg/L, which exceeded the SFBRWQCB ESL of 0.10 mg/L. The Phase II ESA concluded that additional investigation would be required to evaluate the extent of total petroleum hydrocarbon impact in groundwater.

According to the *Phase I ESA* (see Appendix F), a Supplemental Site Investigation Letter Report, dated August 2, 2016, was prepared by BBJ Group, LLC (BBJ Group), to analyze soil and ground water samples at two soil borings at the facility. Laboratory analysis of the soil indicated a concentration of TPH-gasoline range organics of 0.0514 milligrams per kilogram (mg/kg), which was below the SFBRWQCB ESL. No other chemicals were detected in the soil samples above laboratory reporting limits. One of the temporary monitor wells did not have enough groundwater to collect a sample for analysis. Laboratory analysis of the groundwater sample indicated a concentration of TPH-DRO of 0.264 mg/kg, which exceeded the SFBRWQCB ESL of 0.1 mg/L. BBJ Group concluded that a "no further action" letter should be provided for the facility because the concentration of TPH-DRO was only slightly above the environmental screening level.

As part of the *Phase I ESA* (see Appendix F), WKA reviewed a Preliminary Investigation and Evaluation Report, dated May 4, 2018, prepared for the facility by The Vertex Companies, Inc. (Vertex). Vertex installed one monitoring well and advanced three soil borings at the facility. One groundwater sample was collected from the monitoring well for analysis of TPH-DRO and TPH-GRO. Four soil samples were collected from the borings. Laboratory analysis of the soil samples indicated a concentration of 13 mg/kg of TPH-DRO in one sample, which is below the SFBRWQCB ESL of 1,100 mg/kg. Laboratory analysis of the groundwater sample indicated a concentration of TPH-GRO of 27 micrograms per liter (ug/L), which was below the ESL of 50 ug/L, and Vertex recommended closure for the oil/water separator.

According to a Sacramento County EMD Local Oversight Program letter, dated September 14, 2018, the Sacramento County EMD requested additional investigation of the former UST location and that the facility be evaluated for vapor intrusion and direct contact/outdoor air. According to a Sacramento County EMD letter, dated May 28, 2020, the Sacramento County EMD requested a workplan sufficient to complete the investigation at the facility. According to the *Phase I ESA* (see Appendix F), no additional assessment reports for the facility were available for review; therefore, based on the above information, this facility has the potential to impact the Plan Area due to groundwater contamination from petroleum hydrocarbon.

CHEVRON #9-1703 FACILITY

The Chevron #9-1703 facility, 7999 Greenback Lane, is located 0.02 miles north of the Plan Area across Greenback Lane. The facility is listed on the SWRCB LUST database. As part of the *Phase I* ESA, a Special Groundwater Monitoring Event – Fourth Quarter 2014 report, dated November 7, 2014, was reviewed for the facility. According to the 2014 report, the depth to groundwater ranged from 38 to 44 feet below ground surface with groundwater flow reported to be to the east. According to a Sacramento County Environmental Management Department letter, dated January 23, 2017, the facility received a no further action status. Based on the information reviewed, this facility has not impacted the Plan Area.

THE SUPERIOR CLEANERS FACILITY

The Superior Cleaners facility, 8033 Greenback Lane, is located 0.09 miles north of the Plan Area across Greenback Lane. The facility has also operated under the following names: Judi's Cleaners, Sunrise Cleaners, and Greenback Square Cleaners. The facility is listed on the US EPA Drycleaners, Department of Toxic Substances Control's (DTSC) EnviroStor and Haznet, Sacramento County Master List databases. According to a Sacramento County EMD Compliance Inspection Report, dated November 22, 1994, Superior Cleaners was operating and the facility had dry cleaning machines, which had been disconnected and the facility was to be closed. According to a Sacramento County EMD Dry Cleaning Facility Inspection Notes, dated August 14, 1998, Greenback Square Cleaners was operating and the inspector noted the present of 85 gallons of perchloroethylene. As part of the *Phase I* ESA, Sacramento County EMD permits for a drycleaner from 2003 to 2009 were located for the facility in the Sacramento County EMD records. The most recent SCMED inspection report for review was dated March 25, 2009. No violations were noted for the facility in 2009. The facility is topographically downgradient of the Plan Area and

groundwater flow is reportedly to the east. Based on topography and groundwater flow, this facility has not impacted the Plan Area.

THE UNOCAL #7256 FACILITY

The Unocal #7256 facility, 8000 Greenback Lane, is located on the northeastern adjoining property. The facility is listed on SWRCB LUST, DTSC Haznet, CERS, CERS Tanks, CERS Haz Waste, and Sacramento County Contaminated Sites databases. According to information provided on the SWRCB GeoTracker website, the facility status was designated as "completed – case closed" on July 10, 1997. Based on the information reviewed, this facility has not impacted the Plan Area.

THE BRAKE MASTERS FACILITY

The Brake Masters facility, 8000 Greenback Lane, is located on the northeastern adjoining property. The facility is listed on the DTSC Haznet, and CERs databases. As part of the *Phase I* ESA, the most recent inspection reports for the facility were reviewed from the Sacramento County EMD. The facility was inspected on November 7, 2016. According to the reports, one violation was noted and corrected during the inspection. Based on the information reviewed, this facility has not impacted the Plan Area.

THE FORMER MONTGOMERY WARDS/AUTO EXPRESS FACILITY

The Former Montgomery Wards (TBA)/Auto Express facility, 6199 Sunrise Boulevard, is located 0.03 miles west of the Plan Area across Sunrise Boulevard. The facility is listed on SWRCB Leaking Underground Storage Tank (LUST), DTSC Haznet, California Environmental Reporting System (CERS), CERS Haz Waste, and the Sacramento County Contaminated Sites databases. According to a Sacramento County EMD letter, dated July 19, 2006, the facility received a no further action status. Based on the information reviewed, this facility has not impacted the Plan Area.

THE SHELL #204-1566-0800 FACILITY

The Shell #204-1566-0800 facility, 7899 Greenback Lane, is located 0.04 miles northwest of the Plan Area across the intersection of Greenback Lane and Sunrise Boulevard. The facility is listed on the DTSC Haznet, SWRCB LUST, CERS, CERS Haz Waste, and Sacramento County Contaminated Sites databases. According to a Sacramento County EMD letter, dated June 9, 2015, the facility received a no further action status. Based on the information reviewed, this facility has not impacted the Plan Area.

Preliminary Screen for Vapor Encroachment Conditions

As part of the Phase I ESA, a preliminary screening for vapor encroachment conditions (VEC) beneath the Plan Area was conducted utilizing the Tier 1 VEC evaluation.[1] The Tier 1 screening included performing a Search Distance Test to identify if there are any known or suspect

[1] The Preliminary Screen for Vapor Encroachment Conditions was based on the guidelines presented in the ASTM *E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*

contaminated properties surrounding or upgradient of the Site within specific search radii, and a Chemicals of Concern (COC) Test (for those known or suspect contaminated properties identified within the Search Distance Test) to evaluate whether or not COC are likely to be present.

Based on the completion of the VEC-screening matrix, a VEC cannot be ruled out due to potential impacts to groundwater on Parcel G. The Sacramento County EMD has requested additional investigation of the property including soil vapor sampling. According to the Phase I ESA, the VEC should be evaluated after the soil vapor investigation has been completed. In addition, if petroleum impacts are identified beneath the automotive repair facilities on Parcels B and C, the VEC should be re-evaluated.

Transportation of Hazardous Materials

The transportation of hazardous materials within the City of Citrus Heights Planning Area is subject to various federal, state, and local regulations. The following provisions are included in the California Vehicle Code (CVC) and pertain to the transportation of hazardous related materials.

- The Highway Patrol designates the routes in California which are to be used for the transportation of explosives. (Section 31616)
- The CVC applies when the explosives are transported as a delivery service for hire or in quantities in excess of 1,000 pounds. The transportation of explosives in quantities of 1,000 pounds or less, or other than on a public highway, is subject to the California Health and Safety Code. (Section 31601(a))
- It is illegal to transport explosives or inhalation hazards on any public highway not designated for that purpose, unless the use of the highway is required to permit delivery of, or the loading of, such materials. (Section 31602(b) and Section 32104(a))
- When transporting explosives through or into a city for which a route has not been designated by the Highway Patrol, drivers must follow routes as may be prescribed or established by local authorities. (Section 31614(a))
- Inhalation hazards and poison gases are subject to additional safeguards. These materials are highly toxic, spread rapidly, and require rapid and widespread evacuation if there is loss of containment or a fire. The Highway Patrol designates through routes to be used for the transportation of inhalation hazards. It may also designate separate through routes for the transportation of inhalation hazards composed of any chemical rocket propellant. (Section 32100 and Section 32102(b))

A major transportation route for hazardous materials is I-80, located approximately 2.7 miles west of the Plan Area. Other major transportation routes within Citrus Heights include Greenback Lane (bordering the Plan Area on the north), Sunrise Boulevard (bordering the Plan Area on the west), Auburn Boulevard/Old Auburn Road (approximately 1.8 miles north/northwest of the Plan Area), Antelope Road (approximately 2.0 miles north of the Plan Area), and Madison Avenue (approximately 0.5 miles south of the Plan Area). Rail lines are also a common transportation method for hazardous materials. The nearest railway is approximately 4.7 miles east of the Plan Area.

3.6.2 REGULATORY SETTING

FEDERAL

The primary federal agencies that are responsible for overseeing regulations and policies regarding hazardous materials are the Environmental Protection Agency (EPA), Department of Labor Occupational Safety and Health Administration (OSHA), and the Department of Transportation (DOT). Several laws governing the transport, storage, and use of hazardous materials are governed by these agencies as well as oversight for contaminated sites cleanup. Federal laws and regulations that are applicable to hazards and hazardous materials are presented below.

Hazardous Materials Transportation Act

The Hazardous Materials Transportation Act, as amended, is the basic statute regulating hazardous materials transportation in the United States. The purpose of the law is to provide adequate protection against the risks to life and property inherent in transporting hazardous materials in interstate commerce. This law gives the U.S. Department of Transportation (USDOT) and other agencies the authority to issue and enforce rules and regulations governing the safe transportation of hazardous materials (DOE 2002).

Natural Gas Pipeline Safety Act

The Natural Gas Pipeline Safety Act authorizes the U.S. Department of Transportation Office of Pipeline Safety to regulate pipeline transportation of natural (flammable, toxic, or corrosive) gas and other gases as well as the transportation and storage of liquefied natural gas. The Office of Pipeline Safety regulates the design, construction, inspection, testing, operation, and maintenance of pipeline facilities. While the federal government is primarily responsible for developing, issuing, and enforcing pipeline safety regulations, the pipeline safety statutes provide for State assumption of the intrastate regulatory, inspection, and enforcement responsibilities under an annual certification. To qualify for certification, a state must adopt the minimum federal regulations and may adopt additional or more stringent regulations as long as they are not incompatible.

Resource Conservation and Recovery Act

The 1976 Federal Resource Conservation and Recovery Act (RCRA) and the 1984 RCRA Amendments regulate the treatment, storage, and disposal of hazardous and non-hazardous wastes. The legislation mandated that hazardous wastes be tracked from the point of generation to their ultimate fate in the environment. This includes detailed tracking of hazardous materials during transport and permitting of hazardous material handling facilities.

The 1984 RCRA amendments provided the framework for a regulatory program designed to prevent releases from USTs. The program established tank and leak detection standards, including spill and overflow protection devices for new tanks. The tanks must also meet performance standards to ensure that the stored material will not corrode the tanks. The RCRA was further amended in 1988 to set additional standards for USTs.

In July 2015, the EPA revised the federal UST regulation, which strengthened the 1988 federal UST regulations by increasing emphasis on properly operating and maintaining UST equipment. The revision added new operation and maintenance requirements and addressed UST systems deferred in the 1988 UST regulation. The purpose of the revision was to help prevent and detect UST releases, which are a leading source of groundwater contamination. To ensure compliance performance measures reflect the 2015 UST regulation, the Environmental Protection Agency (EPA) and the Association of State and Territorial Solid Waste Management Officials coordinated to update existing compliance performance measures and add new measures. The measures required states to switch from tracking compliance against significant operational compliance measures to the more stringent technical compliance rate (TCR) measures. As of October 2019, only 43.7 percent of USTs were in compliance with all TCR categories.

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (the Act) introduced active federal involvement to emergency response, site remediation, and spill prevention, most notably the Superfund program. The Act was intended to be comprehensive in encompassing both the prevention of, and response to, uncontrolled hazardous substances releases. The Act deals with environmental response, providing mechanisms for reacting to emergencies and to chronic hazardous material releases. In addition to establishing procedures to prevent and remedy problems, it establishes a system for compensating appropriate individuals and assigning appropriate liability. It is designed to plan for and respond to failure in other regulatory programs and to remedy problems resulting from action taken before the era of comprehensive regulatory protection.

Toxic Substances Control Act

The Toxic Substances Control Act of 1976 provides the EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from Toxic Substances Control Act, including, among others, food, drugs, cosmetics and pesticides. The Toxic Substances Control Act addresses the production, importation, use, and disposal of specific chemicals including PCBs, asbestos, radon and lead-based paint.

Various sections of Toxic Substances Control Act provide authority to:

- Require, under Section 5, pre-manufacture notification for "new chemical substances" before manufacture.
- Require, under Section 4, testing of chemicals by manufacturers, importers, and processors where risks or exposures of concern are found.
- Issue Significant New Use Rules (SNURs), under Section 5, when it identifies a "significant new use" that could result in exposures to, or releases of, a substance of concern.
- Maintain the Toxic Substances Control Act Inventory, under Section 8, which contains more than 83,000 chemicals. As new chemicals are commercially manufactured or imported, they are placed on the list.

- Require those importing or exporting chemicals, under Sections 12(b) and 13, to comply with certification reporting and/or other requirements.
- Require, under Section 8, reporting and record-keeping by persons who manufacture, import, process, and/or distribute chemical substances in commerce.
- Require, under Section 8(e), that any person who manufactures (including imports), processes, or distributes in commerce a chemical substance or mixture and who obtains information which reasonably supports the conclusion that such substance or mixture presents a substantial risk of injury to health or the environment to immediately inform EPA, except where EPA has been adequately informed of such information. EPA screens all Toxic Substances Control Act b§8(e) submissions as well as voluntary "For Your Information" (FYI) submissions. The latter are not required by law, but are submitted by industry and public interest groups for a variety of reasons.

STATE

The primary state agencies that are responsible for overseeing regulations and policies regarding hazardous materials are the California Office of Emergency Services (OES), Cal EPA, DTSC, California Department of Transportation (Caltrans), California Highway Patrol (CHP), California Water Quality Control Board, and the California Air Resources Board. Several laws governing the generation, transport, and disposal of hazardous materials are administered by these agencies. State laws and regulations that are applicable to hazards and hazardous materials are presented below.

California Health and Safety Code

Cal EPA has established rules governing the use of hazardous materials and the management of hazardous wastes. Many of these regulations are embodied in the California Health and Safety Code. The code includes regulations that govern safe drinking water, substances control, land reuse and revitalization, remediation, restoration, and methamphetamine contaminated cleanups.

California Hazardous Materials Release Response Plans and Inventory Program Business Plan

When hazardous materials are improperly handled or stored, they can result in a threat to employees, public health, and/or the contamination of the environment. State and Federal Community Right-to-Know laws were passed in 1984. These laws allow public access to information about the types and amounts of chemicals being used at local businesses. The laws also require businesses to plan and prepare for a chemical emergency through the preparation of a Hazardous Materials Inventory that is certified annually and a Hazardous Materials Business Plan that is certified tri-annually. Businesses are inspected at least once every three years by a CUPA inspector to verify compliance with the California Health and Safety Code and California Code of Regulations.

A Business Emergency Response Plan and Inventory is required of any facility which handles hazardous materials or waste in amounts greater than:

- 55 gallons for liquids;
- 500 pounds for solids; or
- 200 cubic feet for compressed gases.

On October 8, 2011, Governor Brown signed Assembly Bill (AB) 408. AB 408 amends the Health & Safety Code Chapter 6.95, Section 25503.5 hazardous materials inventory reporting thresholds. With passage of this legislation, inventory reporting quantities were changed as follows:

1. For a solid or liquid hazardous material that is classified as a hazard solely as an irritant or sensitizer, the new reporting quantity is 5,000 pounds.
2. For a hazardous material that is a gas, at standard temperature and pressure, and for which the only health and physical hazards are simple asphyxiation and the release of pressure, the new reporting quantity is 1,000 cubic feet. (Reporting of gases in a cryogenic state remains unchanged).
3. For oil-filled electrical equipment that is not contiguous to an electrical facility, the new reporting quantity for the oil is 1,320 gallons.

California Code of Regulations Title 22 and Title 26

The California Code of Regulations (CCR) Title 22 provides state regulations for hazardous materials, and CCR Title 26 provides regulation of hazardous materials management. In 1996, Cal EPA established the "Unified Hazardous Waste and Hazardous Materials Management Regulatory Program" (Unified Program) which consolidated the six administrative components of hazardous waste and materials into one program.

California Government Code Section 65962.5

The provisions in Government Code Section 65962.5 are commonly referred to as the "Cortese List" (after the Legislator who authored the legislation that enacted it). The list, or a site's presence on the list, has bearing on the local permitting process as well as on compliance with CEQA. Government Code § 65962.5 was originally enacted in 1985, and per subsection (g), the effective date of the changes called for under the amendments to this section was January 1, 1992. While Government Code Section 65962.5 refers to the preparation of a "list," many changes have occurred related to web-based information access since 1992 and this information is now largely available on the Internet sites of the responsible organizations. Those requesting a copy of the Cortese "list" are now referred directly to the appropriate information resources contained on the Internet web sites of the boards or departments that are referenced in the statute.

Section 65962.5(a)(1) requires that DTSC "shall compile and update as appropriate, but at least annually, and shall submit to the Secretary for Environmental Protection, a list of all the following: ….(1) [a]ll hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code ("HSC")."

The hazardous waste facilities identified in HSC § 25187.5 are those where DTSC has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined

that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Occupational Safety and Health Act

The Occupational Safety and Health Act of 1970 (OSH Act) was passed to prevent workers from being killed or otherwise harmed at work. The law requires employers to provide their employees with working conditions that are free of known dangers. The OSH Act created the Occupational Safety and Health Administration (OSHA), which sets and enforces protective workplace safety and health standards. OSHA also provides information, training and assistance to employers and workers.

The California Division of Occupational Safety and Health, better known as Cal/OSHA, protects and improves the health and safety of working men and women in California and the safety of passengers riding on elevators, amusement rides, and tramways – through the following activities:

- Setting and enforcing standards;
- Providing outreach, education, and assistance; and
- Issuing permits, licenses, certifications, registrations, and approvals.

LOCAL

City of Citrus Heights General Plan

The Citrus Heights General Plan contains the following goal and policies that are relevant to hazards and hazardous materials:

COMMUNITY HEALTH ELEMENT

Goal 51: Protect the community's health, safety, natural resources and property from potential risks associated with the use, transport, treatment, and disposal of hazardous materials.

> **Policy 51.1:** Provide for the safe use and disposal of hazardous materials and appropriate responses to protect the City in the event of a hazardous materials incident.
>
> **Policy 51.3:** Work with Sacramento County and other public agencies to inform businesses and consumers about the proper use and disposal of hazardous materials and waste.

Sacramento Countywide Local Hazard Mitigation Plan

The Sacramento Countywide Local Hazard Mitigation Plan (December 2016) provides a guide to hazard mitigation planning to better protect the people and property of the County and participating jurisdictions from the effects of natural disasters and hazard events. This plan demonstrates the community's commitment to reducing risks from hazards and serves as a tool to help decision makers direct mitigation activities and resources. The plan was also developed in order for the County and participating jurisdictions to be eligible for certain federal disaster assistance.

County of Sacramento Emergency Operations Plan

The County of Sacramento Emergency Operations Plan addresses the County's planned response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies in or affecting the County of Sacramento. The Plan does not apply to normal day-to-day emergencies or the established departmental procedures used to cope with such emergencies. Rather, the Plan focuses on operational concepts and would be implemented relative to large-scale disasters, which can pose major threats to life, property and the environment requiring unusual emergency responses. The purpose of the County of Sacramento Emergency Operations Plan is to provide the basis for a coordinated response before, during, and after a disaster incident affecting the County of Sacramento.

Hazardous Materials Emergency Response Plan

The Sacramento Metropolitan Fire District (fire district) has developed a Hazardous Materials Emergency Response Plan. The plan describes organizational and operation responsibilities in the event of a hazardous materials emergency, including cleanup and decontamination procedures. Through mutual aid agreements, the fire district can request services from Placer County, the City of Sacramento, and the Sacramento Metropolitan Fire District Hazardous Materials Response Teams in the event of a large-scale incident. The fire district also provides assistance to the California Highway Patrol, OES, and other responding agencies, as requested, in the event of a hazardous materials spill on State Route 65 or I-80. The fire district updates its Hazardous Materials Emergency Response Plan every 3 years. The plan is an extension of the City's Multi-Hazard Functional Plan, and follows nationally adopted Incident Command System guidelines.

Sacramento County Area Plan

The Sacramento County Environmental Management Department established the Sacramento County Area Plan (SCAP) as a guideline for hazardous material related accidents or occurrences. The purpose of the SCAP is "to delineate responsibilities and actions by various agencies in Sacramento County required to meet the obligation to protect the health and welfare of the populace, natural resources (environment), and the public and private properties involving hazardous materials." The SCAP is used for making initial decisions at a hazardous materials incident. The SCAP uses Level I, Level II and Level III classifications for hazardous material incidents, which are determined by the following planning basis:

- Level of technical expertise required to abate the incident;
- Extent of Municipal, County, and State Government involved;
- Extent of evacuation of civilians; and
- Extent of injuries and/or deaths.

Sacramento County Office of Emergency Services

The Sacramento County Office of Emergency Services staffs the Operational Area Emergency Operations Center (EOC), a central facility responsible for carrying out the principles of emergency preparedness and emergency management, or disaster management functions at a strategic level

in an emergency situation, and ensuring the continuity of operation of the County. The Sacramento County Office of Emergency Services is responsible for:

- Alerting and notifying appropriate agencies when disaster strikes;
- Coordinating response recovery activities among multiple participating agencies and jurisdictions;
- Constantly monitoring incident status and maintaining situational awareness;
- Responding to complex incidents;
- Coordinating available resources to be mobilized in times of disaster;
- Developing plans and procedures in response to and recovery from disasters;
- Developing and providing preparedness materials and presentations to the public and business community; and
- Administering and coordinating the Homeland Security grants for the county of Sacramento.

Certified Unified Program Agency (CUPA)

The California Environmental Protection Agency designates specific local agencies as Certified Unified Program Agencies (CUPA), typically at the county level. Sacramento County Environmental Management Department is the CUPA for Sacramento County.

The Sacramento County Environmental Management Department (EMD) coordinates the overall County response to disasters and also works with other municipalities in the region as well as state and federal agencies, community based and private organizations. The Sacramento County EMD is responsible for the implementation of statewide programs within its jurisdiction, including: Underground storage of hazardous substances (USTs), Hazardous Materials Business Plan (HMP) requirements, California Accidental Release Prevention (Cal-ARP) program, etc. Implementation of these programs involves permitting, inspecting, providing education/guidance, investigations, and enforcement.

Additionally, the Sacramento County EMD maintains the Toxic Site Cleanup and the Local Remediation Programs. As previously stated, the Toxic Site Cleanup Program provides mandated regulatory oversight of the assessment and remediation of properties on which there has been a release of hazardous materials to soil and/or groundwater. Regulators in this program determine when and to what degree site cleanup is required to mitigate threats to public health and the environment. Most of the contaminated sites in this program have been impacted by petroleum releases from leaking underground storage tanks; however, other regulated contaminants of concern include lead, chromium, dry cleaning solvents, industrial degreasing agents, and pesticides. The Local Remediation Program provides technical regulatory oversight for corrective actions at hazardous materials release sites involving non-petroleum products (for example, dry cleaners, metal plating shops.) Because Sacramento County EMD's statutory authority to regulate non-petroleum release sites is limited, this is a voluntary site cleanup program where the responsible party (RP) has requested EMD oversight.

3.6.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact from hazards and hazardous materials if it will:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

IMPACTS AND MITIGATION MEASURES

Impact 3.6-1: Specific Plan implementation has the potential to create a significant hazard through the routine transport, use, or disposal of hazardous materials or through the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment (Less than Significant with Mitigation)

The unauthorized releases of hazardous materials into the environment could create environmental impacts to properties, the natural environment, and human health. The significance of these impacts could vary according to the release location and the quantity and nature of the substance released. Hazardous releases can occur in areas that treat, store, transport and use hazardous materials; however, certain areas are at higher risk for releases. In the event of an unauthorized release of hazardous materials/substances, emergency response measures must be implemented to mitigate potential risks and ensure the protection of human health and the natural environment.

CONSTRUCTION PHASE IMPACTS

The proposed Specific Plan would facilitate the development of up to 2,220 residential units, up to 480 hotel rooms, up to 320,000 sf of retail uses, up to 960,000 sf of office uses, and up to 450,000 sf of community/institutional land uses. The Plan Area is currently developed with the Sunrise Mall, consisting of 12 existing structures totaling approximately 1,4000,000 sf of existing building area and 6,400 existing parking spaces over seven parcels (i.e., Parcels A-G).

Buildout of the Specific Plan would involve the demolition of the on-site structures, which were originally constructed in 1972. Given the age of the structures, it is likely that asbestos containing building materials and lead-based paints were used in the construction and/or maintenance of the on-site structures. While the Sunrise Mall property manager noted that the mall did undergo extensive renovations in 1999 resulting in the removal of asbestos-containing building materials, the potential still exists for construction workers to be exposed to these hazardous materials. Pursuant to federal (NESHAP), state (8 CCR 1529), and county (SMAQMD Rule 902) regulations, all suspect asbestos-containing materials would either be presumed to contain asbestos or adequate rebuttal sampling would be conducted by an accredited building inspector prior to demolition. Demolition contractors would be required to follow applicable regulations and guidelines set forth by federal, state, and county regulations. Prior to demolition and/or renovation of structures within the Plan Area, asbestos-containing building material and lead-based paint surveys should be conducted, as required by Mitigation Measure 3.6-1. If hazardous materials are determined to be present at concentrations exceeding applicable ESLs, appropriate remediation would need to be implemented in coordination with the Sacramento County EMD.

Site grading, excavation, trenching, and backfilling for utilities would be conducted prior to buildout of proposed Specific Plan Area. As previously noted, the *Phase I ESA* (see Appendix F) identified ten facilities within and adjacent to the Plan Area that are listed on federal, state, and local hazardous materials databases and could potentially expose construction workers and the general public to hazardous materials. Of the ten facilities, four are located within the Plan Area, including the Goodyear Tire Center facility on Parcel B, the Firestone Store #35C facility on Parcel C, the Sky Cleaners facility on Parcel D, and the Sears Auto Center #6799 facility on Parcel G. Figures 3.6-1a and 3.6-1b identify these facilities on an aerial of the Plan Area and proposed Specific Plan land use map, respectively, to highlight the sensitive hazardous areas within the Plan Area.

The historical and current operation of the Goodyear Tire Center facility on Parcel B and Firestone Store #35C facility on Parcel C are identified as RECs in the *Phase I ESA*. Both automotive repair shops contain hydraulic lifts with aboveground and underground hydraulic fluid tanks, oil/water separators, and waste oil storage tanks. It should be noted that a 550-gallon underground waste oil tank was removed from the Firestone Store #35C in 1990; however, no soil samples were collected from the pit tank. Additionally, according to the *Phase I ESA*, it is possible a gas station operated at the Firestone Store #35C facility prior to 1984 due to the physical appearance of a canopy area with concrete islands to the west of the facility. However, according to City staff, the canopy area was not previously used as a gas station. Demolition and redevelopment of the Goodyear Tire Center facility and Firestone Store #35C facility could potentially result in the accidental release of hazardous materials into the environment and/or expose the public to hazardous materials. Future projects under the proposed Specific Plan involving the demolition and/or renovation of these facilities would need to conduct specific evaluations to determine if soil sampling is necessary, as required by Mitigation Measure 3.6-2. For Parcels B and C, investigations should include evaluating the locations of hydraulic lifts that have had in-ground hydraulic fluid tanks, oil/water separators, and former locations of underground waste oil tanks. If results of the soil sampling identify concentrations of hazardous materials exceeding appropriate ESLs, on-site

remediation would be required in coordination with the Sacramento County EMD. Implementation of Mitigation Measure 3.6-2 would ensure the demolition and redevelopment of the Goodyear Tire Center facility and Firestone Store #35C facility would not result in accidental release of or exposure to hazardous materials.

The Sky Cleaners facility, 6186 Sunrise Mall, occupied a suite of a multi-tenant commercial structure located on the southern portion of Parcel D within the Plan Area (see Figures 3.6-1a and 3.6-1b), which was demolished by 2016. Prior to the demolition of the multi-tenant commercial structure, assessment of the suite formerly occupied by Sky Cleaners was conducted for contamination. Laboratory analysis of soil and groundwater samples collected from the former Sky Cleaners suite indicated that concentrations of tetrachloroethylene detected in soils were below environmental screening levels. Therefore, impacts from the Sky Cleaners facility would be less than significant.

The Sears Auto Center #6799 facility, 5900 Sunrise Boulevard, is located in the southernmost structure on Parcel G (see Figures 3.6-1a and 3.6-1b). The Sears Auto Center #6799 facility was formerly occupied by the Sears Auto Service Center and is a LUST site that has been undergoing assessment under the oversight of the Sacramento County EMD. As previously mentioned, the *Phase I ESA* (see Appendix F) identifies on-site concerns from potential petroleum hydrocarbon impacts to groundwater. According to a Sacramento County EMD Local Oversight Program letter, dated September 14, 2018, the Sacramento County EMD requested additional investigation of the former UST location if no data was available and that the facility be evaluated for vapor intrusion and direct contact/outdoor air. According to a Sacramento County EMD letter, dated May 28, 2020, the Sacramento County EMD requested a workplan sufficient to complete the investigation at the facility. According to the *Phase I ESA*, no additional assessment reports for the facility were available for review. Therefore, the *Phase I ESA* recommends the owner of Parcel G should continue the investigation of the potential petroleum hydrocarbon impacts to groundwater under the oversight of the Sacramento County EMD. This recommendation has been incorporated as Mitigation Measure 3.6-3 and shall be implemented prior to demolition and/or redevelopment Sears Auto Center #6799 facility.

Additionally, site reconnaissance conducted as part of the *Phase I ESA* identified unknown hazardous materials on Parcel E, which has the potential for hazardous releases during demolition and/or redevelopment. As previously noted, Parcel E contains Sacramento Municipal Utility District (SMUD) equipment areas located along the exterior of the main Sunrise Mall structure. During site reconnaissance, one SMUD equipment area labeled “6047” contained unknown hazardous materials stored within multiple containers. Given the concrete beneath the containers was stained and the materials within the containers is unknown, the potential exists for the accidental release of and/or exposure to hazardous materials during site demolition and redevelopment if not properly discarded. Prior to demolition and redevelopment of SMUD equipment area “6047” and neighboring areas, the existing containers with unknown contents shall be identified and properly disposed, as required by Mitigation Measure 3.6-4.

Construction activities associated with implementation of the proposed Specific Plan would likely require the use of petroleum-based products (oil, gasoline, diesel fuel), and a variety of chemicals

including paints, cleaners, and solvents. The use of these materials would pose a reasonable risk of release into the environment if not properly handled, stored, and transported. Mitigation Measure 3.6-5 requires the project applicant for individual development within the Specific Plan area to submit a Construction Site Management Plan, for review and approval by the City, that establishes management practices for handling hazardous materials, including fuels, paints, cleaners, solvents, etc., during construction to reduce the potential for spills and to direct the safe handling of hazardous materials if encountered. Moreover, an accidental release into the environment could result in the contamination of water, habitat, and countless resources. Mitigation Measure 3.4-1 contained in Section 3.4, Geology and Soils, ensures compliance with existing regulatory requirements of the Regional Water Quality Control Board, which require the preparation a project specific Stormwater Pollution Prevention Plan (SWPPP). The SWPPP is required to include project specific best management measures that are designed to control erosion and the loss of topsoil to the extent practicable using best management practices (BMPs) that the RWQCB has deemed effective in controlling erosion, sedimentation, and runoff during construction activities.

Additionally, if, during the construction process, the project applicant or subcontractors generates hazardous waste, the applicant must register with the CUPA as a generator of hazardous waste, obtain an EPA ID# and accumulate, ship and dispose of the hazardous waste per Health and Safety Code Ch. 6.5. (California Hazardous Waste Control Law). Contractors would be required to comply with Cal-EPA's Unified Program; regulated activities would be managed by the Sacramento County EMD, the designated Certified Unified Program Agency for Sacramento County, in accordance with the regulations included in the Unified Program (e.g., hazardous materials release response plans and inventories, California UFC hazardous material management plans and inventories).

Overall, Implementation of Mitigation Measures 3.6-1 through 3.6-5 and Mitigation Measure 3.4-1 contained in Section 3.4, Geology and Soils, would reduce potential impacts that could occur due to the routine transport, use, or disposal of hazardous materials or through the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment associated with construction activities within the Plan area to a ***less than significant*** level.

OPERATIONAL PHASE IMPACTS

The operational phase of implementation of the Specific Plan would occur after construction is completed and business operators/employees, and residents move in to occupy the structures and facilities on a day-to-day basis. Hazardous waste generators in the Plan Area include industries, businesses, public and private institutions, and households. Facilities that store, use or handle hazardous materials above reportable amounts are required to prepare and file a Hazardous Materials Business Plan (Business Plan) for the safe storage and use of chemicals. In the event of an emergency, firefighters, health officials, planners, public safety officers, health care providers and others rely on the Business Plan. Implementation of the Business Plan would prevent or reduce damage to the health and safety of people and the environment if a hazardous material is released.

The Sacramento County EMD, as the local CUPA, is responsible for administering/overseeing compliance with the Hazardous Materials Business Plan requirements, as well as other related regulatory programs such as those involving USTs, hazardous waste generation, hazardous waste treatment and disposal facility permitting, and hazardous materials releases.

Implementation of the proposed Specific Plan would result in the continued use and storage of hazardous materials, including common cleaning products, building maintenance products, paints and solvents, and other similar items. Routinely used hazardous materials, however, would not be of the type or occur in sufficient quantities to pose a significant hazard to public health and safety or to the environment. It is anticipated that some facilities within the Specific Plan area would use certain classes of hazardous materials that require risk management plans to protect surrounding land uses. Future development also would result in continued generation of hazardous waste by certain facilities. Therefore, the transport of hazardous materials could occur during future operational activities. However, transport of hazardous materials would be subject to existing federal, State, and local regulations, as well as cooperation with the local CUPA and the Sacramento Metropolitan Fire District.

Implementation of the Specific Plan would allow a mix of development that supports a livable urban neighborhood, including residential uses for townhouses, multi-family units, and senior housing units; retail/food/beverage uses for anchor retail department stores, ground floor retail stores, movie theatres, music venues, grocery stores, restaurants, breweries, and bars; mixed-uses for residential lofts above ground floor retail and office uses; office uses for creative, tech, and professional offices; community/institutional uses for child care centers, gyms, and community centers; and hotel uses for conference center hotels, boutique hotels, and extended stay hotels.

Each of these uses would likely use a variety of hazardous materials commonly found in urban areas including: paints, cleaners, and cleaning solvents. There could be a risk of release of these materials into the environment if they are not stored and handled in accordance with best management practices approved by Sacramento County EMD and the Sacramento Metropolitan Fire District. In addition, prior to bringing hazardous materials onsite, the applicant would be required to submit a Hazardous Materials Business Plan (HMBP) to Sacramento County EMD (CUPA) for review and approval. This would be required by existing laws and regulations governing hazardous materials in the County. Compliance with the applicable regulations, as well as implementation of the following mitigation measures, as appropriate, would ensure that the implementation of the Specific Plan would have a ***less than significant*** impact relative to this issue.

MITIGATION MEASURE(S)

Mitigation Measure 3.6-1*: Prior to any renovations or demolition of the existing structures within the Plan Area, surveys shall be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. If concentrations of hazardous materials are determined to exceed applicable ESL thresholds, appropriate on-site remediation shall be conducted in coordination with the Sacramento County EMD. Removal, demolition and disposal of any of the above-mentioned chemicals shall be*

conducted in compliance with California and other local environmental regulations and policies, including but not limited to the Sacramento Metropolitan Air Quality Management District's Rule 902.

***Mitigation Measure 3.6-2**: Prior to the demolition of sensitive hazardous areas identified on Figures 3.6-1a and 3.6-1b for Parcels B (Goodyear Tire Center facility) and C (Firestone Store #35C) , area specific evaluations shall be conducted to determine if soil sampling is required, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. Investigations shall include evaluating the locations of hydraulic lifts that have had in-ground hydraulic fluid tanks, oil/water separators, and former locations of underground waste oil tanks. If soil sampling is determined necessary, a soil sampling report shall be prepared by a qualified consultant that includes recommendations to any concentrations of hazardous materials in exceedance of appropriate ESL thresholds, as necessary, which shall be implemented by the future project proponent.*

***Mitigation Measure 3.6-3**: Prior to the demolition and redevelopment of the sensitive hazardous area identified on Figures 3.6-1a and 3.6-1b for Parcel G (Sears Auto Center #6799 facility), the owner of Parcel G and/or future project proponent shall complete the investigation of the potential petroleum hydrocarbon impacts to groundwater under the oversight of the Sacramento County EMD, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property. If it is determined that petroleum hydrocarbon is present and impacting groundwater, on-site remediation shall be conducted to the satisfaction of the Sacramento County EMD.*

***Mitigation Measure 3.6-4**: Prior to the demolition and redevelopment of the SMUD equipment area "6047" and neighboring areas on Parcel E, the existing containers with unknown contents shall be identified and property disposed of, as recommended by the Phase I ESA (dated November 9, 2020) prepared by WKA for the Sunrise Tomorrow Property.*

***Mitigation Measure 3.6-5**: Prior to commencement of grading, the applicant shall submit Construction Site Management Plan for review and approval by the City. The Construction Site Management Plan shall include the following requirements:*

- *Hazardous materials must be stored in locations that are removed from storm drain inlets, drainage ways, and canals, and that are surrounded by earthen berms to prevent materials from entering stormwater runoff or natural drainage features. The materials must also be covered with impervious tarps or stored inside buildings to ensure that materials are not released to the air during windy conditions or exposed to rain.*
- *All construction crew members must be trained regarding best practices for use, storage, and disposal of hazardous materials.*
- *All construction crew members must be instructed to immediately notify a construction foreperson of any spills of hazards materials, and the foreperson must take steps to contain the spilled materials.*
- *Any releases of hazardous materials must be immediately reported to the Sacramento County Environmental Compliance Division of Sacramento County's Environmental*

Management Department and remediated in accordance with Sacramento County's requirements. This may include excavating and disposing of contaminated soil. Typically, construction projects require on-site storage of relatively small amounts of hazardous materials, which would also limit the potential impacts from a release of these materials.

Impact 3.6-2: Specific Plan implementation would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school (Less than Significant)

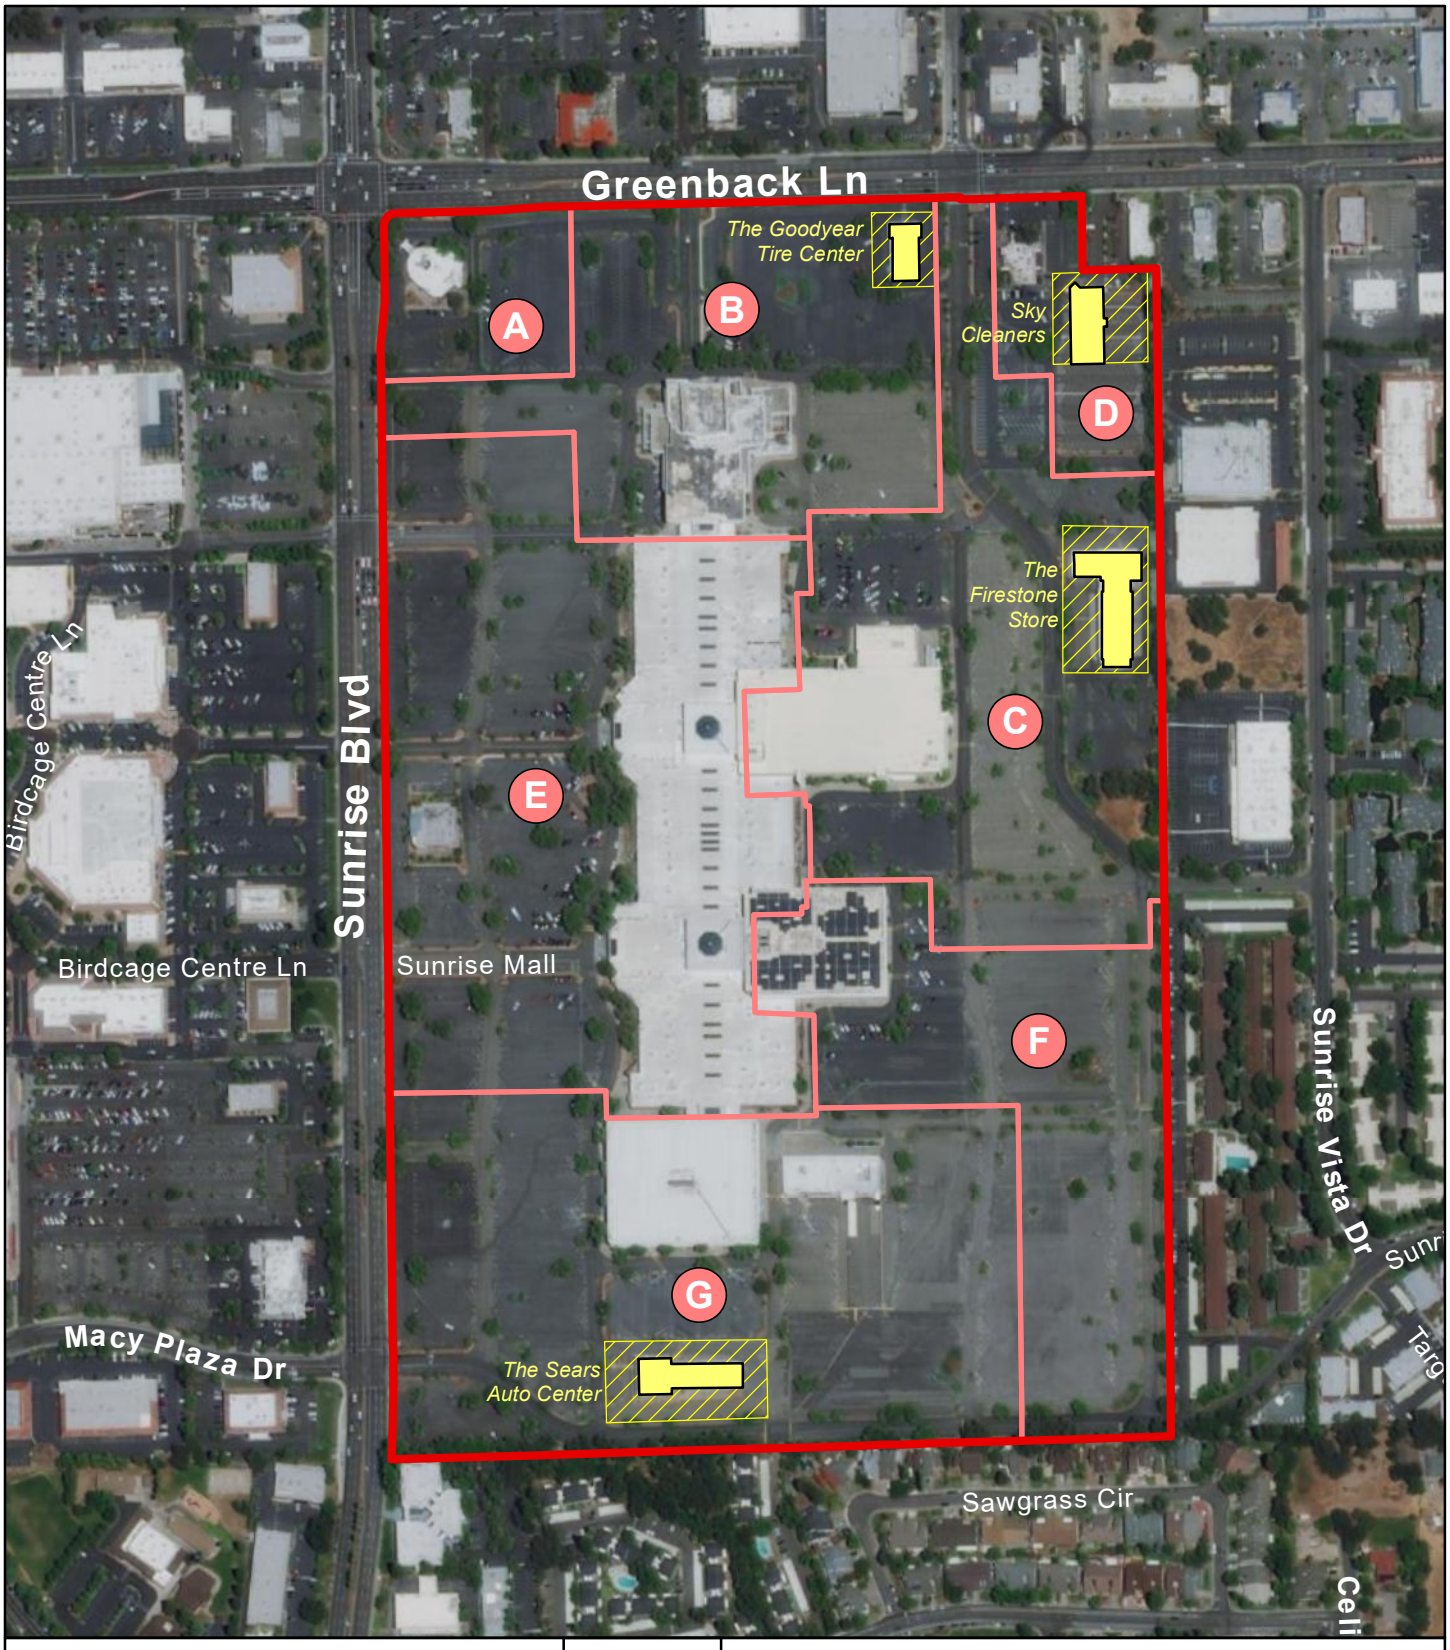
The Specific Plan has the potential for the routine transport, use, or disposal of hazardous materials, as described under Impact 3.6-1. The closest school to the Plan Area is the Saint Lutheran Church and School located within approximately 0.1 miles from the southwest corner of the Plan Area. Additionally, Kingswood Elementary School is located approximately 0.26 miles from the southwest corner of the Plan Area. However, as provided under Impact 3.6-1, with implementation of Mitigation Measures 3.6-1 through 3.6-5, potential risks associated with the routine transport, use, or disposal of hazardous materials resulting from implementation of the Specific Plan would be reduced to a less than significant level. Mitigation Measure 3.6-5 requires the preparation of a Construction Site Management Plan to establish management practices for handling hazardous materials, including fuels, paints, cleaners, solvents, etc., during construction to reduce the potential for spills and to direct the safe handling of hazardous materials if encountered. In addition, businesses generating hazard waste would be required to comply with a HMBP and to register with the CUPA, as appropriate and as required by existing laws and regulations governing hazardous materials in the County. Additional requirements are provided in Mitigation Measures 3.6-1 through 3.6-4, such as additional site assessments and other remediation activities including surveys and assessments, cleanup plans, programs, and activities, as applicable. Therefore, the potential for existing or new hazards within the Plan Area or generated by the proposed Specific Plan to affect nearby schools is less than significant. Moreover, compliance with the applicable General Plan objectives and policies would ensure that the Specific Plan implementation would have a limited potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste with one-quarter of an existing school. Therefore, implementation of the Specific Plan would have a ***less than significant*** impact with respect to emitting hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within 0.25-mile of an existing or proposed school.

Impact 3.6-3: Specific Plan implementation would not result in impacts from being included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (Less than Significant)

According to the *Phase I ESA*, the Plan Area is not on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Implementation of the Specific Plan would have a ***less than significant*** impact with regards to this environmental issue.

Impact 3.6-4: Specific Plan implementation would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan (Less than Significant)

(*Note: The following discussion is associated with potential impacts of the Specific Plan on emergency response plans and/or evacuation plans. Proposed emergency vehicle access to and from the site is addressed in Section 3.12, Transportation and Circulation*.)



Buildout of the Specific Plan would not result in any substantial modifications to the existing roadway system and would not interfere with potential evacuation or response routes used by emergency response teams. The Specific Plan would redevelop the site to establish an on-site network of streets, roadways, access points, and pedestrian and bicycle routes, allowing for easy access across and to/from the Plan Area. Buildout of the Specific Plan would provide for safe and efficient vehicular circulation connecting to existing roadways and creating additional connections to adjacent uses. Primary access would be from Sunrise Boulevard and Greenback Lane.

The City is a participatory agency for the Sacramento Countywide Local Hazard Mitigation Plan, which plans for emergency management and evacuation in the event of disasters. According to the Plan, potential hazards in the County include severe weather (likely or highly likely), agricultural hazards (highly likely), bird strike (highly likely), climate change (highly likely), dam failure (unlikely), drought (likely), earthquake (occasional), flood (occasional/unlikely or highly likely), landslides (unlikely), levee failure (occasional), bank erosion (highly likely), subsidence (highly likely), volcano (unlikely), and wildfire (highly likely). The Sacramento Countywide Local Hazard Mitigation Plan does not include any specific requirements that would affect the Plan Area.

Sacramento County OES has prepared several emergency response plans to aid coordination between local, state, and federal agencies during emergency situations such as human-caused disasters, natural disasters, and national security incidents. The Sacramento County Evacuation Plan establishes a strategy for evacuation of people within Sacramento County during the event of an emergency. The plan includes procedures for public alert and warning, transportation, and care and shelter of affected individuals. This evacuation plan is in addition to Sacramento County's Emergency Operations Plan, which sets forth a plan to address response to large-scale disasters before, during, and after an incident (Sacramento County 2017). The various plans and procedures (i.e., dam failure plan, flood alert system, and evacuation procedures) for emergency response and evacuation are integrated into the Emergency Operations Plan. The Emergency Operations Plan does not include any specific requirements that would affect the Plan Area. Additionally, the Sacramento Metropolitan Fire District has developed a Hazardous Materials Emergency Response Plan that specifies organization and operation responsibilities in the event of a hazardous materials emergency, including cleanup and decontamination procedures.

Overall, buildout of the Specific Plan would not interfere with any emergency response plan or emergency evaluation plan, as the Specific Plan does not include any actions that would impair or physically interfere with the Sacramento Countywide Local Hazard Mitigation Plan and redevelopment of the site would improve the on-site circulation network. Additionally, the specific design and layout of future development projects under the Specific Plan would be reviewed by

the City's law enforcement and fire personnel to ensure that adequate emergency ingress and egress is provided throughout the site that would not interfere or impair evacuation plans. Therefore, impacts related to the potential for the project to impair implementation of emergency response plans would be ***less than significant*** impact.

This section describes the regulatory setting, regional hydrology and water quality impacts that are likely to result from Specific Plan implementation, and includes measures to reduce potential impacts related to stormwater drainage, flooding and water quality. This section is based in part on the following documents, reports and studies:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- *Citrus Heights Water District 2015 Urban Water Management Plan* (CHWD, 2016); and
- *Water Supply Assessment for the Sunrise Tomorrow Specific Plan* (West Yost, November 2020).

A comment was received during the public review period for the Notice of Preparation regarding this topic from the Central Valley Regional Water Quality Control Board (RWQCB, September 2020). This comment is addressed within this section.

As described in the Initial Study (see Appendix A), impacts associated with flooding, dam inundation, and inundation by seiche, tsunami, or mudflow would be ***less than significant***. These issues will not be addressed further.

3.7.1 ENVIRONMENTAL SETTING

REGIONAL HYDROLOGY

The Plan Area is located in the City of Citrus Heights, within Sacramento County near the center of the Sacramento Valley, approximately 16 miles northeast of the confluence of the American and Sacramento Rivers. The Sacramento Valley is bordered by the Coast Ranges and Delta on the west and the foothills of the Sierra Nevada to the east. Water resources in this region include rivers, streams, sloughs, marshes, wetlands, channels, harbors, and underground aquifers. The topography is generally flat, and is drained by the Sacramento River, which is part of the Sacramento River Flood Control Project.

Climate

Climate in the Sacramento Valley is characterized by warm, dry summers with an almost complete absence of rain, and mild winters with relatively light rains. Periods of dense and persistent low-level fog that are most prevalent between storms are characteristic of Sacramento Valley winter weather. The average winter temperature is a moderate 49 degrees Fahrenheit (°F). Most precipitation in the area results from air masses that move in from the Pacific Ocean from the west or northwest during the winter rainy season (October to April). During the summer, daily temperatures range from 50°F to more than 100°F. The inland location and surrounding Coastal mountains shelter the area from much of the ocean breezes that keep the coastal regions moderate in temperature. Additionally, wind from the Delta Breeze carries cooler air from off the Pacific Ocean, which provides moderate temperature relief in the summer.

Watersheds

A watershed is a region that is bound by a divide that drains to a common watercourse or body of water. Watersheds serve an important biological function, oftentimes supporting an abundance of aquatic and terrestrial wildlife including special-status species and anadromous and native local fisheries. Watersheds provide conditions necessary for riparian habitat.

The State of California uses a hierarchical naming and numbering convention to define watershed areas for management purposes. This means that boundaries are defined according to size and topography, with multiple sub-watersheds within larger watersheds. Table 3.7-1 shows the primary watershed classification levels used by the State. The second column indicates the approximate size that a watershed area may be within a particular classification level, although variation in size is common.

TABLE 3.7-1: STATE OF CALIFORNIA WATERSHED HIERARCHY NAMING CONVENTION

WATERSHED LEVEL	*APPROXIMATE SQUARE MILES (ACRES)*	*DESCRIPTION*
Hydrologic Region (HR)	12,735 (8,150,000)	Defined by large-scale topographic and geologic considerations. The State of California is divided into ten HRs.
Hydrologic Unit (HU)	672 (430,000)	Defined by surface drainage; may include a major river watershed, groundwater basin, or closed drainage, among others.
Hydrologic Area (HA)	244 (156,000)	Major subdivisions of hydrologic units, such as by major tributaries, groundwater attributes, or stream components.
Hydrologic Sub-Area (HSA)	195 (125,000)	A major segment of an HA with significant geographical characteristics or hydrological homogeneity.

SOURCE: CALIFORNIA DEPARTMENT OF WATER RESOURCES, 2012.

HYDROLOGIC REGION

The Plan Area is located in the Sacramento River Hydrologic Region, which covers approximately 17.4 million acres (27,200 square miles) and all or large portions of Modoc, Siskiyou, Lassen, Shasta, Tehama, Glenn, Plumas, Butte, Colusa, Sutter, Yuba, Sierra, Nevada, Placer, Sacramento, El Dorado, Yolo, Solano, Lake, and Napa counties. Small areas of Alpine and Amador counties are also within the region. Geographically, the region extends south from the Modoc Plateau and Cascade Range at the Oregon border, to the Sacramento-San Joaquin Delta. The Sacramento Valley, which forms the core of the region, is bounded to the east by the crest of the Sierra Nevada and southern Cascades and to the west by the crest of the Coast Range and Klamath Mountains. Other significant features include Mount Shasta and Lassen Peak in the southern Cascades, Sutter Buttes in the south-central portion of the valley, and the Sacramento River, which is the longest river system in the State of California with major tributaries the Pit, Feather, Yuba, Bear and American rivers. Area population centers include Sacramento, Redding, Chico, and Davis.

HYDROLOGIC UNIT

The Plan Area is located within the Valley-American Hydrologic Unit. For purposes of regional planning, hydrologic units are generally considered to be the appropriate watershed planning

level. However, the hydrologic unit level is generally too large in terms of a planning scale for individual projects, and a hydrologic area or hydrologic subarea may be considered more appropriate.

HYDROLOGIC AREA/SUB-AREA

The Plan Area is located within the Coon American Area and the Lower American Sub-Area. The Coon American Area is a tributary to the Sacramento River. Storm water flows in the area captured in the local storm drains are discharged to the American River. The Lower American Sub-Area is a seasonal water tributary to the Sacramento River.

LOCAL SETTING

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 2.0-3). The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 180 feet above mean sea level (MSL).

No federally regulated wetlands are present within the Plan Area according to wetland maps prepared by the US Department of the Interior, Fish and Wildlife Service's Internet Wetland Interactive Mapper. Additionally, no vegetation characteristics of wetlands are present within the Plan Area. There are no areas within a 0.25-mile radius of the Plan Area which could be or have been determined by the U.S. Army Corps of Engineers to be wetlands. The closet wetland identified by the US Department of the Interior, Fish and Wildlife Service's Internet Wetland Interactive Mapper is located approximately 0.5 miles north of the Plan Area within the Mitchell Village subdivision.

San Juan Creek is the closest surface water body to the Plan Area, and the natural portions of the Creek are located immediately adjacent to the Plan Area at the southwest corner where it meets the southern Plan Area boundary. In the Plan Area, the Creek exists within a previously-constructed box culvert. The natural portion of San Juan Creek flows into the culvert in the Plan Area, and farther west of the Plan Area the creek flows out of downstream iterations of the box culvert into other channel designs and ultimately back to a natural creek channel. The next closest open surface water to the Plan Area is Arcade Creek, which is located approximately 0.42 miles (approximately 2,200 feet) to the north. According to FEMA Flood Plain Panel # 060262 0095E, the majority of the Plan Area is located in Zone X (unshaded), which is outside of the 500-year flood-plain. A small portion of the Plan Area, along Sunrise Boulevard to the west, is located in Zone X (shaded), which is defined as areas of 500-year flood; areas of 100-year flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 100-year flood.

Drainage

The Plan Area is currently developed with the Sunrise Mall and associated parking areas. San Juan Creek is the closest surface water body to the Plan Area, located immediately adjacent to the Plan Area at the southwest corner where it meets the southern Plan Area boundary. Stormwater runoff is collected by catch basins and discharges into the municipal stormwater management system.

Stormwater Quality

Potential hazards to surface water quality include the following nonpoint pollution sources: high turbidity from sediment resulting from erosion of improperly graded construction projects; concentration of nitrates and dissolved solids from agriculture or surfacing septic tank failures; viruses, bacteria, and nutrients from pet waste and failing septic systems; oil, grease, and toxic chemicals from motor vehicles; heavy metals from roof shingles motor vehicles, and other sources; contaminated street and other impervious area run-off from urban areas; and warm water drainage discharges into cold water streams.

A critical period for surface water quality is following a rainstorm (also known as “first flush events”) which produces drainage runoff into streams with low flows, resulting in poor dilution of contaminants and elevated levels in the low flowing streams. Such conditions are most frequent during the fall at the beginning of the rainy season when stream flows are near their lowest annual levels and contaminants have accumulated on impervious surfaces over the drier summer months. Besides greases, oils, pesticides, litter, and organic matter associated with such runoff, heavy metals such as copper, zinc, and cadmium can cause considerable harm to aquatic organisms when introduced to streams in low flow conditions.

Urban stormwater runoff was managed as a non-point discharge (a source not readily identifiable) under the Federal Water Pollution Control Amendments of 1972 (PL 92-500, Section 208) until the mid-1980s. However, since then, the Federal Environmental Protection Agency has continued to develop policies and permitting which categorize urban runoff as a point source (an identifiable source) subject to National Pollution Discharge Elimination System (NPDES) permits. Rules now affect medium and large urban areas, and further rulemaking is expected as programs are developed to meet requirements of Federal water pollution control laws.

Surface water pollution is also caused by erosion. Excessive and improperly managed grading and vegetation removal associated with urban development can lead to increased erosion of exposed earth and sedimentation of watercourses during rainy periods. In slower moving water bodies, these same factors often cause a buildup of sediment, which ultimately reduces the capacity of the water system to percolate and recharge groundwater basins, as well as adversely affects both aquatic resources and flood control efforts.

303(D) IMPAIRED WATER BODIES

Section 303(d) of the federal Clean Water Act requires States to identify waters that do not meet water quality standards or objectives and thus, are considered "impaired." Once listed, Section 303(d) mandates prioritization and development of a Total Maximum Daily Load (TMDL). The

TMDL is a tool that establishes the allowable loadings or other quantifiable parameters for a waterbody and thereby the basis for the States to establish water quality-based controls. The purpose of TMDLs is to ensure that beneficial uses are restored and that water quality objectives are achieved.

Arcade Creek has been identified under the federal Clean Water Act Section 303(d)(1)(A) as an impaired water body due to elevated concentrations of the insecticides diazinon and chlorpyrifos, in addition to dissolved copper, mercury, and methylmercury (Central Valley RWQCB RESO No. R5-2004-0109). A total maximum daily load was established for the creek that includes water quality objectives and numeric targets to ensure that water in the creek is maintained free of toxic substances. Based on the last Water Quality Progress report, water quality is improving in the creek, but has not yet reached the total maximum daily load targets (EPA 2015).

Additionally, as required by the MS4 permit (2016), the Sacramento Stormwater Quality Partnership (SSQP) has a monitoring program to address the TMDL requirements. The City of Citrus Heights actively participates in the SSQP. Monitoring associated with specific, historic low impact development (LID) projects in the City of Citrus Heights has been used as a key component of the SSQP monitoring program.

Chlorpyrifos and diazinon are organophosphorus pesticides used for urban and agricultural pest control, while the source of mercury for the Sacramento and American rivers is associated with legacy mining activities within their watersheds.

WATER RESOURCES

The Citrus Heights Water District (CHWD) would provide water supplies to the Specific Plan Area through its water supply system. CHWD uses purchased surface water, self-supplied surface water and groundwater as its sources of water supply. The Department of Water Resources (DWR) defines purchased water as water purchased from other suppliers, including non-self-supplied surface water. The water demands of the Specific Plan will be met with groundwater and surface water. Both of these sources are discussed in detail below.

Water Service Area

Domestic water service to the City of Citrus Heights is provided by three water districts. The water provider in the project vicinity is CHWD. The CHWD (originally the Citrus Heights Water Irrigation District) was formed on October 25, 1920, and is one of the oldest public agencies in the City. As stated, CHWD receives surface water from the SJWD. As documented in the SJWD Urban Water Management Plan, SJWD operates a 150 million gallon per day (mgd) WTP; storage facilities; several pump stations; and 17 miles of transmission facilities. SJWD's wholesale customers include the City of Folsom, north of the American River; CHWD; Fair Oaks Water District; Orangevale Water Company; and San Juan Water District Retail. SJWD has three primary sources of surface water supplies: (1) pre-1914 water rights, (2) a long-term Central Valley Project contractual supply, and (3) a long-term contract with Placer County Water Agency. Surface water from these three sources is diverted through U.S. Bureau of Reclamation facilities at Folsom Dam and delivered to

the Sidney N. Peterson WTP, and then sent to the Hinkle Reservoir before being distributed to the CHWD (Kennedy Jenks 2016).

CHWD and the other wholesale customer agencies of SJWD routinely coordinate supply planning and other issues, such as through membership and participation in the Regional Water Authority and the Sacramento Groundwater Authority. The Regional Water Authority coordinates regional water supply planning and represents member agencies regarding state-wide water issues. The Sacramento Groundwater Authority helps support management and monitoring of the groundwater basin to maintain sustainability.

The CHWD participated in the Water Forum, a regional stakeholder effort to ensure reliable water supplies for the region through the year 2030 and to protect the environmental, aesthetic, and recreational values of the Lower American River. The Water Forum process began in the early 1990s and a comprehensive Water Forum Agreement (WFA) was adopted by the Water Forum participants in 2000. In addition, purveyor-specific agreements for each water purveyor based on the commitments made in the WFA were signed in 2000.

Water Forum stakeholders developed the WFA as an integrated package of actions that will meet the two primary objectives of the Water Forum. Each element of the WFA is necessary for a regional solution to work. These elements are:

- Increase surface water divisions;
- Actions to meet customers' needs while reducing diversion impacts on the lower American River in drier years;
- An improved pattern of fishery flow releases from Folsom Reservoir;
- Lower American River Habitat Management, which also addresses recreation in the lower American River;
- Water conservation;
- Groundwater management; and
- Water Forum successor efforts.

Under the WFA and the purveyor-specific agreements, water agencies may be expected to reduce their surface water diversions in certain dry years, depending on the inflow of water into Folsom Reservoir. As occurred in the recent drought, the WFA envisions that water agencies will meet customer demands during the dry years through a mix of conjunctive use and conservation programs to reduce customer demands (CHWD 2016).

Water Distribution System

The CHWD water system consists of water treatment plants, pipelines, storage tanks, and wells. Projects within the Plan Area would connect to CHWD existing water supply infrastructure located at the intersection of Sunrise Boulevard and Greenback lane. New water distribution pipelines and valves would be provided within the Specific Plan Area, primarily within the roadways, to serve the proposed development.

Surface Water

CHWD purchases the majority of its surface water from the San Juan Water District (SJWD). SJWD treats water from Folsom Lake at Peterson Water Treatment Plant (WTP) located near the southwestern edge of Folsom Lake in Granite Bay. The Peterson WTP provides domestic water supply meeting federal and state drinking water standards, with a treatment capacity of 150 million gallons per day. SJWD serves five wholesale customer agencies, with a total population of 151,131 and 50,850 connections. The CHWD territory includes a population of 65,093 (43% of the total population) through 19,785 connections (39% of the total connections). In 2015, the CHWD supplied a total of 9,974 acre-feet of water, with 78% of this water going to residential customers. In the 2015 Urban Water Management Plan, CHWD projects relatively low population growth, with a 0.5% annual increase in connections. The population is estimated to increase to 66,720 by 2020 and 68,348 by 2025.

SJWD has supplied the CHWD with between 17,000 acre-feet to 20,500 acre-feet of surface water annually between 1998 and 2008. In 2015, SJWD projected total wholesale demands of 31,223 acre-feet of water, of which 30,276 acre-feet were sold to other agencies. The remaining demands were for flows to Baldwin reservoir, process water used at the Peterson WTP, golf course irrigation, and estimated system losses. Annual water demand between 2000 and 2008 had been higher, ranging between 50,000 and 60,000 acre-feet per year, and has been trending downward since 2008. In 2015, SJWD's retail customers exceeded the 36% reduction in water use mandated by the State Water Resources Control Board in 2015.

SJWD's water supply includes pre-1914 rights to 33,000 acre-feet per year (AFY) of water from Folsom Reservoir. It also includes an additional 24,200 AFY of Central Valley Project water from Folsom Reservoir through a contract with the U.S. Bureau of Reclamation and 25,000 AFY through a contract with the Placer County Water Agency. However, these can be substantially reduced in dry years. In 2015, SJWD was allowed only 796 acre-feet under its contract with the U.S. Bureau of Reclamation and 10,000 acre-feet from the Placer County Water Agency. SJWD has water rights to 53,700 acre-feet in 2018 and 46,000 acre-feet in 2019. According to the SJWD, even in the driest water year, sufficient water supply is available to serve its retail water agencies.

Groundwater

The groundwater basin underlying the District is the North American Sub-basin, part of the larger Sacramento Valley groundwater basin. California Department of Water Resources California's Groundwater Update 2003, Bulletin 118, identifies the basin as 5- 21.64.

Water bearing formations beneath the District occur in two major strata. The upper water-bearing units include the geologic formations of the Victor, Fair Oaks, and Laguna Formations and are typically unconfined. The lower water-bearing unit consists primarily of the Mehrten Formation, which exhibits confined conditions. The Mehrten Formation is the most productive fresh water-bearing unit in the eastern Sacramento Valley, though some of the permeable layers of the Fair Oaks Formation produce moderate amounts of water. Much of the recharge of these aquifer systems comes from the Sacramento and American Rivers and their tributaries where gravel

deposits exist. To a lesser extent, aquifer recharge also occurs where the Mehrten Formation reaches the surface in the foothills in eastern Sacramento and western El Dorado County areas.

Supply wells in the Sacramento region draw water primarily from the Mehrten and Fair Oaks formations and typically produce 500-1,500 gallons per minute (gpm) of good to excellent quality water. Although there are areas within the basin, outside CHWD, that exhibit elevated levels of iron, manganese, and arsenic; CHWD's wells do not exhibit any water quality issues that impact its use as potable water supply or require treatment other than disinfection prior to service.

The local groundwater basin does contain three significant major groundwater contamination areas. The Union Pacific Railroad plume located northwest of the District in Roseville and the McClellan Air Force Base plume located west of the District. Both plumes are down-gradient and not expected to impact the District's groundwater quality. A third groundwater contamination plume attributed to Aerojet's historic operations was first detected in groundwater south of the American River in 1979. Since that time, Aerojet has installed groundwater treatment facilities and has conducted other efforts to treat and control the plume migration. However, the plume was detected north of the American River near Fair Oaks in 2000 and another plume was detected north of the American River in 2005 near Ancil Hoffman Park in Carmichael. Additional monitoring wells and pump-and-treat facilities have been installed to monitor and treat the plumes attributed to Aerojet.

Total usable capacity and safe yield of the basin have not yet been determined. Usable capacity is assumed to be the yield calculated in the DWR's American Basin Conjunctive Use Project Feasibility Study (1997). The study assumed a specific yield of 7 percent and an assumed thickness of 200 feet. Applying these assumptions to the total basin area results in a usable capacity of 70.2 million acre-feet. The Sacramento Groundwater Authority (SGA) has recently adopted a groundwater accounting framework. The framework allows for SGA member agencies to account for groundwater banking and conjunctive use efforts, and includes consideration and monitoring of groundwater levels. This information will be used to proactively manage the basin's storage capacity and available yield to support a conjunctive use strategy.

Up until the early 2000s, groundwater levels had been generally declining in Sacramento County for the previous 50 years, with many areas declining at a rate of 1.5 to 2.0 feet per year. A groundwater depression that was evident in 1968 significantly expanded and deepened in 1996. The region responded in part through the development of the SGA Groundwater Management Plan and development of multiple conjunctive use projects. As a result of these efforts, SGA reports that groundwater elevation levels have stabilized, or in some cases increased. SGA is also the California Statewide Groundwater Elevation Monitoring (CASGEM) reporting agency for the basin conditions. CHWD is a member of SGA and, through SGA, will continue to track contamination threats and participate in conjunctive use programs or other projects to minimize the risk of the contamination plumes. The comprehensive SGA basin monitoring program and other strategies to mitigate groundwater overdraft on a regional basis are included in the SGA Groundwater Management Plan.

DWR Bulletin 118 does not specifically identify the sub-basin as being in overdraft, but does identify the previous issues with groundwater levels. Groundwater management efforts by the region through SGA and other partnerships have improved and stabilized basin levels.

CHWD plans to construct an additional three wells over the next seven years to provide additional dry-year supplies. The District plans to maintain groundwater supply equivalent of 5,000 AFY from its well system. However, groundwater production could increase up to the full well capacities in successive dry year scenarios. Well site availability could impact the number of wells constructed or the construction implementation schedule. The District continues to monitor its service area for potential well sites and obtains land as available. CHWD's groundwater supplies are subject to factors that could impact reliability. Groundwater basin issues could impact CHWD's groundwater supply. If the wells begin to produce contaminated groundwater, the supply could either be eliminated, reduced or treated. The basin elevation levels have historically decreased, and only recently stabilized or even increased in some locations. If the groundwater levels decrease further, CHWD well capacities could be impacted or even eliminated. However, the SGA has a groundwater accounting framework implemented by the region's water agencies to mitigate and improve the groundwater basin conditions. It is assumed the only issue that could impact supply availability is groundwater contamination. Should this occur, CHWD will evaluate pump-and-treat alternatives versus drilling new wells.

SJWD provided information to CHWD regarding surface water supply availability during each year single, normal and multiple dry water year types. Through 2035, SJWD projects they will have sufficient surface water supply if demands are reduced 15 percent during dry years per the Water Forum Agreement. CHWD will maintain a groundwater supply of up to 5,000 AFY through the its groundwater system.

Water Use

Constraints on CHWD's surface water supplies includes the significant variation of supplies that are available depending on the climate year type. Even though the surface water supplies are not available at a consistent level of use, CHWD has available groundwater supplies to be able to replace the reduction in surface water supplies in dry years. CHWD refers to this potential to use groundwater in addition to its surface water supplies as its conjunctive use program. While groundwater is more consistently available over different climate year types, it has been constrained by groundwater contamination plumes, some naturally occurring contaminants, and the long term need to not exceed the safe yield. Groundwater is considered to be the last priority in meeting water demands, after surface water entitlements and surface water treatment plant capacity area used. The capacity of supply and conveyance facilities is also a constraint on both surface water and groundwater supplies. SCWA has plans to construct additional water supply facilities. In general, water quality does not have a significant impact on CHWD's current and projected water supplies. The SWTP and groundwater treatment plants provide treatment to meet drinking water standards.

3.7.2 REGULATORY SETTING

There are a number of regulatory agencies whose responsibility includes the oversight of the water resources of the state and nation including the Federal Emergency Management Agency, the US Environmental Protection Agency, the State Water Resources Control Board, and the Regional Water Quality Control Board. The following is an overview of the federal, state and local regulations that may be applicable to projects within the City of Citrus Heights.

FEDERAL AND STATE

Clean Water Act (CWA)

The Clean Water Act (CWA), initially passed in 1972, regulates the discharge of pollutants into watersheds throughout the nation. The State Water Resources Control Board (SWRCB) is responsible for implementing the CWA and does so through issuing NPDES permits to cities and counties through RWQCBs. Federal regulations allow two permitting options for stormwater discharges (individual permits and general permits). The Central Valley Regional Water Quality Control Board has developed a single region-wide General Permit for Discharges from Municipal Separate Stormwater Systems (MS4s) (Order No. R5-2016-0040) issued pursuant to CWA Section 402 in order to promote greater watershed/drainage shed coordination, water quality measure protections, and program implementation efficiencies throughout the Central Valley Region. The City has been designated as part of an encompassing municipal separate storm sewer system that includes Elk Grove, Folsom, Galt, Rancho Cordova, Sacramento, and the County of Sacramento, in accordance with Central Valley RWQCB Order R5- 2015-0023, NPDES No. CAS082597.

303(D) IMPAIRED WATER BODIES

Section 303(d) of the federal Clean Water Act requires States to identify waters that do not meet water quality standards or objectives and thus, are considered "impaired." Once listed, Section 303(d) mandates prioritization and development of a Total Maximum Daily Load (TMDL). The TMDL is a tool that establishes the allowable loadings or other quantifiable parameters for a waterbody and thereby the basis for the States to establish water quality-based controls. The purpose of TMDLs is to ensure that beneficial uses are restored and that water quality objectives are achieved.

As noted previously, Arcade Creek has been identified under the federal Clean Water Act Section 303(d)(1)(A) as an impaired water body due to elevated concentrations of the insecticides diazinon and chlorpyrifos, in addition to dissolved copper, mercury, and methylmercury (Central Valley RWQCB RESO No. R5-2004-0109). A total maximum daily load was established for the creek that includes water quality objectives and numeric targets to ensure that water in the creek is maintained free of toxic substances. Based on the last Water Quality Progress report, water quality is improving in the creek, but has not yet reached the total maximum daily load targets (EPA 2015).

California Water Code – Porter-Cologne Act

The Federal Clean Water Act places the primary responsibility for the control of surface water pollution and for planning the development and use of water resources with the states, although this does establish certain guidelines for the States to follow in developing their programs and allows the Environmental Protection Agency to withdraw control from states with inadequate implementation mechanisms.

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act of 1970 (Division 7 of the California Water Code) (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and each of the RWQCBs power to protect water quality, and is the primary vehicle for implementation of California's responsibilities under the Federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and the RWQCBs authority and responsibility to adopt plans and policies, to regulate discharges to surface and groundwater, to regulate waste disposal sites and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a water quality control plan (Basin Plan) for its region. The regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its State water policy. The Porter-Cologne Act also provides that a RWQCB may include within its regional plan water discharge prohibitions applicable to particular conditions, areas, or types of waste.

National Pollutant Discharge Elimination System (NPDES)

NPDES permits are required for discharges of pollutants to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, the ocean, dry stream beds, wetlands, and storm sewers that are tributary to any surface water body. NPDES permits are issued under the Federal Clean Water Act, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.)

The RWQCB issues these permits in lieu of direct issuance by the Environmental Protection Agency, subject to review and approval by the Environmental Protection Agency Regional Administrator. The terms of these NPDES permits implement pertinent provisions of the Federal Clean Water Act and the Act's implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti- degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the Clean Water Act's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also Waste Discharge Requirements issued under the authority of the California Water Code.

These NPDES permits regulate discharges from publicly owned treatment works, industrial discharges, stormwater runoff, dewatering operations, and groundwater cleanup discharges. NPDES permits are issued for periods of five years or less, and are therefore to be updated

regularly. The rapid and dramatic population and urban growth in the Central Valley Region has caused a significant increase in NPDES permit applications for new waste discharges. To expedite the permit issuance process, the RWQCB has adopted several general NPDES permits, each of which regulates numerous discharges of similar types of wastes. Stormwater discharges from industrial and construction activities in the Central Valley Region can be covered under these general permits, which are administered jointly by the SWRCB and RWQCB.

Water Quality Control Plan for the Central Valley Region

The Water Quality Control Plan for the Central Valley Region (Basin Plan) includes a summary of beneficial water uses, water quality objectives needed to protect the identified beneficial uses, and implementation measures. The Basin Plan establishes water quality standards for all the ground and surface waters of the region. The term "water quality standards," as used in the Federal Clean Water Act, includes both the beneficial uses of specific water bodies and the levels of quality that must be met and maintained to protect those uses. The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards.

The RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under a number of programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes, where known. For water bodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included. The Basin Plan reflects, incorporates, and implements applicable portions of a number of national and statewide water quality plans and policies, including the California Water Code and the Clean Water Act.

LOCAL

Central Sacramento County Groundwater Management Plan (CSCGMP)

The Central Sacramento County Groundwater Management Plan (CSCGMP) was completed in 2006 by Central Sacramento County Groundwater Basin stakeholders, in coordination with the SCWA, to establish a framework for maintaining a sustainable groundwater resource for the various users overlying the basin in Sacramento County between the American and Cosumnes Rivers. The CSCGMP assists overlying water users in maintaining a safe, sustainable, and high quality groundwater resource within a given groundwater basin. The five basin management objectives that have been proposed for the Central Basin are listed below. Each objective focuses on managing and monitoring the basin to benefit all groundwater users in the basin and are intended to be specific enough to result in numerical criteria for the basin, but also able to be modified or adapted to new information on groundwater basin behavior over time:

- Maintain the long-term average groundwater extraction rate at or below 273,000 AFY.

- Maintain specific groundwater elevations within all areas of the basin consistent with the Water Forum.
- Protect against any potential inelastic land surface subsidence by limiting subsidence to no more than 0.007 feet per 1 foot of drawdown in the groundwater basin.
- Protect against any adverse impacts to surface water flows in the American, Cosumnes, and Sacramento rivers.
- Water quality objectives for several constituents of concern:
    - Maintain total dissolved solids (TDS) concentration of less than 1,000 milligrams per liter (mg/L);
    - Maintain nitrate (NO_3) concentration of less than 45 mg/L; and
    - Monitor volatile organic compounds (VOC) migration and consider any measurable trace of VOC in private or public wells as significant.

Sacramento Stormwater Quality Partnership (SSQP)

The permittees of the NPDES Municipal Stormwater Permit, i.e. Sacramento County and the cities of Rancho Cordova, Sacramento, Citrus Heights, Elk Grove, Galt, and Folsom, have joined together to form the SSQP. The SSQP is a collaborative partnership that protects and improves water quality in local waterways for the benefit of the community and the environment. The purpose of the SSQP is to:

- Educate and inform the public about urban runoff pollution;
- Encourage public participation in community and clean-up events;
- Work with industries and businesses to encourage pollution prevention;
- Require construction activities to reduce erosion and pollution; and
- Require developing projects to include pollution controls that will continue to operate after construction is complete.

The permittees cooperatively participate in decision-making and goal-setting for the monitoring program, are involved in consultant selection and review, and comment on compliance reports and other work products. Annual Reports are produced that describe the activities conducted to comply with the NPDES permit.

The stormwater pollution prevention efforts needed to satisfy the NPDES permit requirements are implemented by the SSQP through its Stormwater Quality Improvement Plan (SQIP), either jointly or by the individual permittees. The major categories of SQIP activities, conducted jointly by the SSQP, are:

- program management – including legal authority and funding, inter- and intra-agency coordination, effectiveness assessment;
- target pollutant program (including implementation of plans to target mercury and pesticides);
- monitoring program to satisfy monitoring requirements specified in the monitoring and reporting program (MRP) portion of the NPDES permit;
- planning and new development standards such as Hydromodification and LID standards;

- special studies; and
- regional public outreach.

The City of Citrus Heights actively participates in SSQP. Currently, the Sacramento Stormwater Quality Partnership (SSQP) has a monitoring program as required by the MS4 permit (2016) to address the TMDL requirements.

Stormwater Quality Design Manual for Sacramento Region

The Stormwater Quality Design Manual for the Sacramento Region (SQDM) provides locally-adapted information for design and selection of multiple categories of stormwater quality control measures: source control, hydromodification control, treatment control, and low impact development measures. The 2018 edition of the SQDM is based on the *2007 Stormwater Quality Design Manual for the Sacramento and South Placer Regions*, but has been revised to incorporate hydromodification management and low impact development design standards.

This SQDM outlines planning tools and requirements to reduce urban runoff pollution to the maximum extent practicable (MEP) from new development and redevelopment projects. The SQDM is primarily intended for people involved in the design or review/approval of development projects. Chapter 3 of the SQDM outlines steps to select and design stormwater quality features in order to effectively incorporate stormwater management into site design and satisfy the requirements of the permitting agencies in Sacramento County.

Citrus Heights Municipal Code

City of Citrus Heights Code of Ordinances, Article XII, Land Grading and Erosion Control, regulates grading to minimize damage to surrounding properties and public rights-of-way; minimize the degradation of water quality of waterways; minimize the disruption of natural or authorized drainage flows caused by the activities of clearing, grubbing, grading, filling, and excavating of land; and minimize sediment and pollutant runoff from other construction-related activities. In addition, these ordinances regulate grading such that it complies with the provisions of Sacramento County NPDES Permit Number CA0082597, Sacramento Area Stormwater Program, issued by the Central Valley RWQCB.

City of Citrus Heights General Plan

The Citrus Heights General Plan contains the following goals and policies that are relevant to hydrology and water quality:

RESOURCE CONSERVATION ELEMENT

Goal 34: Preserve, protect and enhance natural habitat areas, including creek and riparian corridors, oak woodlands, and wetlands.

> **Policy 34.1:** Preserve continuous riparian corridors and adjacent habitat along the City's creeks and waterways.

Goal 37: Ensure that surface and groundwater quality supports public use, enjoyment and a healthy aquatic environment.

Policy 37.1: Implement low impact development strategies to create water conserving landscapes.

Policy 37.3: Implement water sensitive urban design techniques to promote water efficiency and protect water quality.

Goal 49: Implement stormwater management programs to protect life and property from flood related hazards.

Policy 49.1: Promote drainage improvements through natural means and practices that minimize flooding.

Policy 49.8: Reduce pollutants being discharged into the drainage system to the maximum extent feasible to meet required federal National Pollution Discharge Elimination System standards

3.7.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed Specific Plan will have a significant impact on the environment associated with hydrology and water quality if it will:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality;
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
    - Result in substantial erosion or siltation on- or off-site;
    - Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
    - Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
    - Impede or redirect flood flows;
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

IMPACTS AND MITIGATION MEASURES

Impact 3.7-1: Specific Plan implementation would not violate water quality standards or waste discharge requirements during construction (Less than Significant)

According to the United States Environmental Protection Agency, polluted stormwater runoff is a leading cause of impairment to the nearly 40 percent of surveyed U.S. water bodies which do not meet water quality standards. Over land or via storm drain systems, polluted runoff is discharged, often untreated, directly into local water bodies. Soil erosion is one of the most common sources of polluted stormwater runoff during construction activities. When left uncontrolled, storm water runoff can erode soil and cause sedimentation in waterways, which collectively result in the destruction of fish, wildlife, and aquatic life habitats; a loss in aesthetic value; and threats to public health due to contaminated food, drinking water supplies, and recreational waterways.

Mandated by Congress under the Clean Water Act, the NPDES Stormwater Program is a comprehensive two-phased national program for addressing the non-agricultural sources of stormwater discharges which adversely affect the quality of our nation's waters. The program uses the National Pollutant Discharge Elimination System (NPDES) permitting mechanism to require the implementation of controls designed to prevent harmful pollutants, including soil erosion, from being washed by stormwater runoff into local water bodies. The construction activities for the proposed Specific Plan would be governed by the Construction General Permit (CGP) 2009-0009-DWQ (amended by 2010-0014-DWQ & 2012-0006-DWQ), which states:

> *"…Particular attention must be paid to large, mass graded sites where the potential for soil exposure to the erosive effects of rainfall and wind is great and where there is potential for significant sediment discharge from the site to surface waters. Until permanent vegetation is established, soil cover is the most cost-effective and expeditious method to protect soil particles from detachment and transport by rainfall. Temporary soil stabilization can be the single most important factor in reducing erosion at construction sites. The discharger is required to consider measures such as: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. These erosion control measures are only examples of what should be considered and should not preclude new or innovative approaches currently available or being developed. Erosion control BMPs should be the primary means of preventing storm water contamination, and sediment control techniques should be used to capture any soil that becomes eroded…."*

CGP 2009-0009-DWQ (amended by 2010-0014-DWQ & 2012-0006-DWQ) further states that:

> *"Sediment control BMPs should be the secondary means of preventing storm water contamination. When erosion control techniques are ineffective, sediment control techniques should be used to capture any soil that becomes eroded. The discharger is required to consider perimeter control measures such as: installing silt fences or placing straw wattles below slopes. These sediment control measures are only examples of what*

should be considered and should not preclude new or innovative approaches currently available or being developed…. Inappropriate management of run-on and runoff can result in excessive physical impacts to receiving waters from sediment and increased flows. The discharger is required to manage all run-on and runoff from a Specific Plan Area. Examples include: installing berms and other temporary run-on and runoff diversions…. All measures must be periodically inspected, maintained and repaired to ensure that receiving water quality is protected. Frequent inspections coupled with thorough documentation and timely repair is necessary to ensure that all measures are functioning as intended…."

Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. To ensure that construction activities are covered under CGP 2009-0009-DWQ (amended by 2010-0014-DWQ & 2012-0006-DWQ), projects in California with land disturbance of one-acre or more must prepare a Stormwater Pollution Prevention Plan (SWPPP) containing Best Management Practices (BMPs) to reduce erosion and sediments to meet water quality standards. Such BMPs may include: temporary erosion control measures such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover. The BMPs and overall SWPPP is submitted to the Regional Water Quality Control Board and the City of Citrus Heights as part of the permitting process. Once submitted, the SWPPP is kept on site and implemented during construction activities and must be made available upon request to representatives of the RWQCB and/or the City of Citrus Heights.

In accordance with the NPDES Stormwater Program, an approved SWPPP would be required for future development projects in the Plan Area and designed to control erosion and the loss of topsoil to the extent practicable using BMPs that the RWQCB has deemed effective in controlling erosion, sedimentation, runoff during construction activities. Such BMPs shall include: temporary erosion control measures such as silt fences, staked straw bales/wattles, silt/sediment basins and traps, check dams, geofabric, sandbag dikes, and temporary revegetation or other ground cover or other equally or more effective measures. The BMPs and overall SWPPP are submitted to the RWQCB and the City of Citrus Heights as part of the permitting process. The SWPPP is kept on site and implemented during construction activities and must be made available upon request to representatives of the RWQCB and/or the City of Citrus Heights. The RWQCB has stated that these erosion control measures are only examples of what should be considered and should not preclude equally or more effective new or innovative approaches currently available or being developed. The specific controls are subject to the review and approval by the RWQCB.

CONCLUSION

Future development in accordance with the proposed Specific Plan would not violate water quality standards or waste discharge requirements during construction for activities in compliance with the CGP. Pursuant to the SWPPP that would be required for future projects, the use of BMPs during construction activities would be required in order to reduce erosion, control sediment, and

manage runoff from the Plan Area. The BMPs may include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. The use of these measures would prevent polluted, non-treated runoff from entering the nearby storm drains and waterways. The various RWQCBs have evaluated the effectiveness of the types of BMPs required by a SWPPP and have determined that BMPs are known to be effective in protecting receiving waters[1]. Through compliance with future site-specific SWPPPs, the proposed Specific Plan would have a ***less than significant*** impact relative to this topic.

Impact 3.7-2: Specific Plan implementation would not violate water quality standards or waste discharge requirements during operation (Less than Significant)

The long-term operations of future development projects in the Plan Area could result in long-term impacts to surface water quality from urban stormwater runoff. The proposed Specific Plan would result in new impervious areas associated with roadways, driveways, parking lots, buildings, and landscape areas. However, the Specific Plan would incorporate best practices to support sustainable development including creek & habitat restoration, bioswale / run-off collection, and large permeable green surfaces that would reduce long term impacts to surface water quality. San Juan Creek, a tributary to Arcade Creek was previously buried and undergrounded as part of the original Sunrise Mall construction. As part of the proposed Specific Plan, this existing on-site creek may be restored along with the associated native riparian habitat. A public trail would be provided adjacent to the restored creek.

As part of the optional creek restoration, the Specific Plan may remove and construct an existing dual box culvert at the southwest corner of the site that carries local drainage into Arcade Creek. In order to potentially open this drainage area up as a greenway for aesthetics on the site, the embankment and fill over the dual box-culvert would be removed up to the roadway limits, both on- and offsite. Should the creek restoration be completed, the embankment and grading would need to be reconstructed to creek levels and any construction within the creek channel would need to meet all associated permit requirements, etc. A new headwall and wing walls would need to be constructed at the intake section of the dual box culvert, but existing storm drain flows and patterns are not anticipated to be affected.

The Specific Plan identifies opportunities for implementation of water quality measures that would occur as part of future development activities within the site. Specifically, the Specific Plan identifies over 1,000 linear feet for a very wide proposed landscape/planter area strip (possible embankment in some areas) to be installed as part of the Specific Plan along most of the southern border leg of the site. This area could be made available to construct multiple treatment control

[1] Refer to "Review of Stormwater Best Management Practices at Large Construction Sites" by the Los Angeles RWQCB; Available online:
http://www.waterboards.ca.gov/rwqcb4/water_issues/programs/stormwater/bmp/largeconstreport-august-06.pdf

measures such as vegetated swale(s) or landscape planter. The existing dual 4'x8' box culvert lies directly below this area and there could be an opportunity to add greenway area if a portion of the engineered creek box culvert were removed at the natural entry point to San Juan Creek. To construct and prepare optional improvements near the Creek, permits and approvals would be needed from several regulatory agencies including (but not exclusive to) the Department of Fish & Game, Central Valley Regional Water Quality Control Board, and Sacramento Area Flood Control Agency (SAFCA). Also, in this area of the site is a possible parcel/location that could accommodate a water quality detention basin. There are options to create aesthetic locations for placement of a possible basin along the western perimeter of the Specific Plan site as well (Parcels 3-B-4 and/or 3-B-5).

Normal activities in developed areas include the use of various automotive petroleum products (i.e. oil, grease, and fuel), common household hazardous materials, heavy metals, pesticides, herbicides, fertilizers, and sediment. Within urban areas, these pollutant sources are generally called nonpoint source pollutants until they accumulate in the storm drain system and become point source pollutants. The pollutant levels vary based on factors such as time between storm events, volume of storm event, type of uses, and density of people.

The majority of development allowed under the Specific Plan would be within areas currently developed with urban uses, and the amount and type of runoff generated by various future development and infrastructure projects would be similar to existing conditions; however, the runoff resulting from Specific Plan development could be mitigated through the incorporation of LID and other pollutant control features.

Section 303(d) of the federal Clean Water Act requires States to identify waters that do not meet water quality standards or objectives and thus, are considered "impaired." Once listed, Section 303(d) mandates prioritization and development of a Total Maximum Daily Load (TMDL). The TMDL is a tool that establishes the allowable loadings or other quantifiable parameters for a waterbody and thereby the basis for the States to establish water quality-based controls. The purpose of TMDLs is to ensure that beneficial uses are restored and that water quality objectives are achieved.

As noted previously, Arcade Creek has been identified under the federal Clean Water Act Section 303(d)(1)(A) as an impaired water body due to elevated concentrations of the insecticides diazinon and chlorpyrifos, in addition to dissolved copper, mercury, and methylmercury (Central Valley RWQCB RESO No. R5-2004-0109). A total maximum daily load was established for the creek that includes water quality objectives and numeric targets to ensure that water in the creek is maintained free of toxic substances. Based on the last Water Quality Progress report, water quality is improving in the creek, but has not yet reached the total maximum daily load targets.

Storm water runoff may play a role in the water quality impairments described above. Runoff that occurs as overland flow across yards, driveways, and public streets is intercepted by the storm water drainage system and conveyed to local drainages before eventually being routed to the Pacific. This storm water can carry pollutants that can enter the local waterways and result in the types of water quality impairments described above. Common sources of storm water pollution in

the City include litter, trash, pet waste, paint residue, organic material (yard waste), fertilizers, pesticides, sediments, construction debris, metals from automobile brake pad dust, air pollutants that settle on the ground or attach to rainwater, cooking grease, illegally dumped motor oil, and other harmful fluids.

At this time there is no existing storm drain master plan in place for the Specific Plan Area. The City is scheduled to develop a storm drain master plan in Fiscal Year 2021/2022 The south side of the Specific Plan area property generally flows south and west towards Macy's Plaza Drive, where drainage ultimately outfalls into San Juan Creek via an existing double 4'x8' box culvert. The northern section of the Specific Plan area property ultimately outfalls into a 30" storm drain pipe under Arcadia Drive where it drains north from Greenback Lane towards the Mitchell Village/Farms subdivision.

The proposed site plan and anticipated development would require some detailed design, demolition of the mains at several locations, and flow calculations for pipe sizing. There would be many new lateral connections not only for new building LID features, but also for additional drain inlets, area drains, and manholes. This revised storm drain site system would need to be modified for multiple added surface barriers that would be placed on site for redevelopment (curbs, buildings, trash enclosures, landscaped medians, retaining structures, etc.). This does not include the underground clearances that would also need to be made (utility crossings) for both existing and proposed utilities. However, even with the proposed modifications to the storm drain system, there would be no increase in overall surface flows and as a result no need to modify or up-size any off-site storm drainage mains in order to collect on-site drainage, outside of adding new connections that are not part of this Specific Plan (or existing pipes that could remain, but are found to be defective/inoperative).

The proposed storm drainage system is shown in Figure 2.0-13 in Chapter 2.0, Project Description. As shown, storm drain infrastructure would be located throughout the Plan Area, including but not limited to within roadway right-of-ways, parking areas, and pedestrian pathways. There should be no need to modify or up-size any off-site storm drainage mains in order to collect on-site drainage, outside of adding any new connections to them that are not part of the Specific Plan (or existing pipes that could remain, but are found to be depleted and/or inoperative). As noted previously, the existing box culvert could be removed to expose San Juan Creek and restore the natural habitat.

The Specific Plan may remove and construct the existing dual box culvert at the southwest corner of the site. In order to potentially open this drainage area up as a greenway for aesthetics on the site, the embankment and fill over the dual box-culvert would be removed up to the roadway limits, both on- and offsite. Should the creek restoration be completed, the embankment and grading would need to be reconstructed to creek levels and any construction within the creek channel would need to meet all associated permit requirements, etc. A new headwall and wing walls would need to be constructed at the intake section of the dual box culvert, but existing storm drain flows and patterns are not anticipated to be affected.

The Specific Plan would implement specified performance requirements and requirements for BMPs as appropriate to minimize the long-term, post construction discharge of stormwater pollutants from new development in compliance with the requirements of Order 2016-0040. Each future development and infrastructure project would be required to prepare a detailed project specific drainage plan and a SWPPP that would control storm water runoff and erosion, both during and after construction. If the site-specific development involves the discharge into surface waters, the project proponent would need to acquire a Dewatering permit, NPDES permit, and Waste Discharge permit from the CVRWQCB.

As described above, under the Regulatory Setting, the City is required to implement a range of measures and procedures when reviewing new development and infrastructure projects. Implementation of the City's General Plan policies and actions, as well as the City's adopted Municipal Code requirements, would ensure that water quality is preserved.

CONCLUSION

Compliance with existing City and County construction and stormwater management codes and the SQIP, as outlined above, would reduce these potential impacts related to stormwater quality. In addition, prior to the issuance of grading permits, each site developed under the proposed General Plan would be required to submit a SWPPP and SWMP to the City for approval.

The City manages local storm drain facilities and the SCWA is responsible for regional flood control planning within the County. Provision of LID and BMPs as needed would reduce runoff rates and peak flows. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, WQMPs, SWPPPs, and to implement Best Management Practices. These regulatory requirements are intended to ensure that water quality does not degrade to levels that would violate water quality standards. Through implementation of the Citrus Heights Municipal Code requirements identified above, and compliance with mandatory Federal and State regulations would ensure that impacts to drainage patterns and water quality would be ***less than significant***.

Impact 3.7-3: Specific Plan implementation may decrease groundwater supplies or interfere substantially with groundwater recharge such that the Specific Plan may impede sustainable groundwater management of the basin (Less than Significant with Mitigation)

The quantity of ground water in the Sacramento Valley has been declining for decades, as evidenced by the substantial lowering of water levels in the aquifers. Impacts on groundwater in the Sacramento area are an important consideration in any development plan. See Section 3.13, Utilities and Service Systems, for further discussions regarding groundwater demand, groundwater supplies, groundwater recharge, and groundwater quality. Impacts related to groundwater supplies and interference with groundwater recharge are considered in two ways: (1) conversion of pervious surfaces (which allow for groundwater recharge), and (2) use of groundwater as a water supply (which reduces the amount of local groundwater supply).

GROUNDWATER RECHARGE

While the majority of the Plan Area would remain as impervious surface, future development projects in the Plan Area may result in new rainwater infiltration and groundwater recharge with the development of new previous surfaces. The Specific Plan would incorporate best practices to support sustainable development including restored creek and native habitat, bioswale/run-off collection, and large permeable green surfaces that would reduce new impervious surfaces, rainwater infiltration, and support groundwater recharge. Infiltration rates vary depending on the overlying soil types. In general, sandy soils have higher infiltration rates and can contribute to significant amounts of ground water recharge; clay soils tend to have lower percolation potential; and impervious surfaces such as pavement significantly reduce infiltration capacity and increase surface water runoff.

Future development would include storm water quality BMPs designed to minimize runoff from impervious surfaces entering existing storm drains and surface water courses. Peak runoff and total volume of runoff will be minimized by future development of storm drainage design which retains water to the maximum extent possible.

Future development of the Plan Area under the proposed Specific Plan will modify the movement of water across the land surface and the infiltration of rain water into the groundwater system. Buildout in accordance with the proposed Specific Plan would not decrease groundwater recharge beyond existing conditions as the majority of the site is currently paved with minimal landscaped area allowing for infiltration into the groundwater. The implementation of the proposed Specific Plan would allow for increased infiltration and groundwater recharge due to the development of BMPs to support sustainable development including the optional restoration of creek and native habitat, bioswale / run-off collection, and large permeable green surfaces.

The SQDM, City General Plan policies, and City Municipal Code requirements include BMPs aimed at preserving water quality and groundwater recharge areas. The BMPs required as part of future development of the Plan Area are designed to infiltrate as much storm water runoff as practicable into the ground. A portion of the retained runoff will infiltrate into the ground, helping to replenish the aquifers. The required BMPs are designed to trap contaminants and to beneficially make use of nutrients in the vegetated swales and planted areas. For example, trash capture technologies, such as trash screens at curb inlets are designed to keep trash on the street and stop trash from entering the storm drain system. The aggregate effect of the proposed Specific Plan will, therefore, be to decrease the loading of nutrients into the groundwater.

GROUNDWATER SUPPLIES

The proposed Specific Plan would be served from the CHWD's existing and future water supplies. As discussed in Section 3.13, Utilities, the CHWD currently supplements its surface water supply with five groundwater wells; this provides additional capacity for CHWD to meet peaking, pressure, shortage, and emergency demands. During normal supply years, CHWD draws 900 acre-feet of groundwater to supplement surface water supply.

The Citrus Heights Water District forecasts that it will have sufficient water supplies for demands in its service area over the 2020 to 2040 period in normal, single-dry-year, and multiple-dry-year conditions. Additionally, the Specific Plan water demand is not expected to exceed the CHWD's supplies in any normal, single dry, or multiple dry year between 2020 and 2040.

GROUNDWATER MANAGEMENT PLAN

As noted previously, the CSCGMP was prepared in conformance with SCWA. The objectives of the CSCGMP have been developed to monitor, protect, and sustain groundwater within the region. The City of Citrus Heights and the other participating agencies subsequently adopted the groundwater management plan in 2006.

As discussed above, the Specific Plan would not decrease groundwater supplies or interfere substantially with groundwater recharge such that the Plan may impede sustainable groundwater management. Compliance with the City's General Plan policies and actions will reduce flooding from new development, reduce storm water pollution from new development, and protect and enhance natural storm drainage and water quality features, increase rainwater infiltration, and support groundwater recharge.

CONCLUSION

The Specific Plan would be subject to the SQDM, as required by Mitigation Measure 3.7-1. The Specific Plan would be subject to the required stormwater quality control measures, including source control, low impact development control, treatment control, and trash capture. Table 3-3 of the SQDM summarizes the various stormwater control measures that are required depending on the project type. With regard to stormwater quality, the Plan Area would be designed to conform with current City and regional requirements, as discussed above.

Implementation of the following mitigation measure would reduce potential water quality impacts post-construction to a ***less than significant*** level.

MITIGATION MEASURE(S)

Mitigation Measure 3.7-1*: Before approval of the site plans for all project phases, a detailed Best Management Practice (BMP) and storm water quality maintenance plan (SWQMP) shall be prepared by a qualified engineer retained by the project applicant that meets the standards of the City's NPDES Permit (No. CAS082597) and shall document that stormwater runoff from the Plan Area is treated per the standards in the SQDM. Drafts of the SWQMP shall be submitted to the City of Citrus Heights for review and approval concurrently with development of site plans for all project phases. The SWQMP shall finalize the storm water quality improvements and further detail the structural and nonstructural BMPs proposed for the Specific Plan. The SWQMP shall include the elements described below.*

- *A quantitative hydrologic and storm water quality analysis of proposed conditions incorporating the proposed drainage design features.*

- *Pre-development and post-development calculations demonstrating that the proposed water quality BMPs meet or exceed requirements established by the City of Citrus Heights and including details regarding the size, geometry, and functional timing of storage and release pursuant to the SQDM.*
- *Source control programs to control water quality pollutants on the Plan Area, which may include but are limited to recycling, street sweeping, storm drain cleaning, household hazardous waste collection, waste minimization, prevention of spills and illegal dumping, and effective management of public trash collection areas.*
- *Low Impact Development (LID) shall be integrated into the BMP and SWQMP. These may include, but are not limited to:*
    - *Bioretention planters;*
    - *surface swales;*
    - *replacement of conventional impervious surfaces with pervious surfaces (e.g., porous pavement, green roofs);*
    - *impervious surfaces disconnection; and*
    - *trees planted to intercept stormwater.*

Impact 3.7-4: Specific Plan implementation would not alter the existing drainage pattern in a manner which would result in substantial erosion or siltation on- or off-site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite, or create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff (Less than Significant)

Specific Plan buildout would result in redevelopment of the currently developed site. Upon full buildout, the Plan Area would have an increase in the amount of pervious surfaces on-site compared to the existing condition due to the proposed park, open space, and landscape areas. This could result in a decrease in the volume of stormwater runoff from the Plan Area, which is considered a beneficial impact. Future development would include water quality BMPs designed to reduce runoff entering existing storm drains and surface water courses. Peak runoff and total volume of runoff would be reduced compared to the existing conditions and minimized by the storm drainage design which would be required to retain and treat water to the maximum extent possible.

The proposed Specific Plan would not alter drainage patterns in a manner which would cause flooding, erosion, or siltation. Surface runoff from the area would be managed via parcel-based LID measures and flow reducing BMPs to prevent local flooding within the site. These features would also reduce peak flows from the Plan Area to receiving creeks and storm drains to amounts equal to or less than flows under existing conditions. It is also noted that stormwater resulting from the Plan Area as a whole would be cohesively managed via the proposed network of stormwater improvements and LID measures and BMPs. Flooding, erosion, or siltation is not anticipated by the

proposed Specific Plan given the storm drain design requirements and best management practices that would be implemented.

The proposed Specific Plan would not alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, or polluted runoff. With the implementation of the Specific Plan policies already presented above, compliance with existing regulatory requirements which pertain to water quality and runoff, and with the design and construction of the improvements included in the proposed storm drainage system, the proposed Specific Plan would have a ***less than significant*** impact relative to this topic.

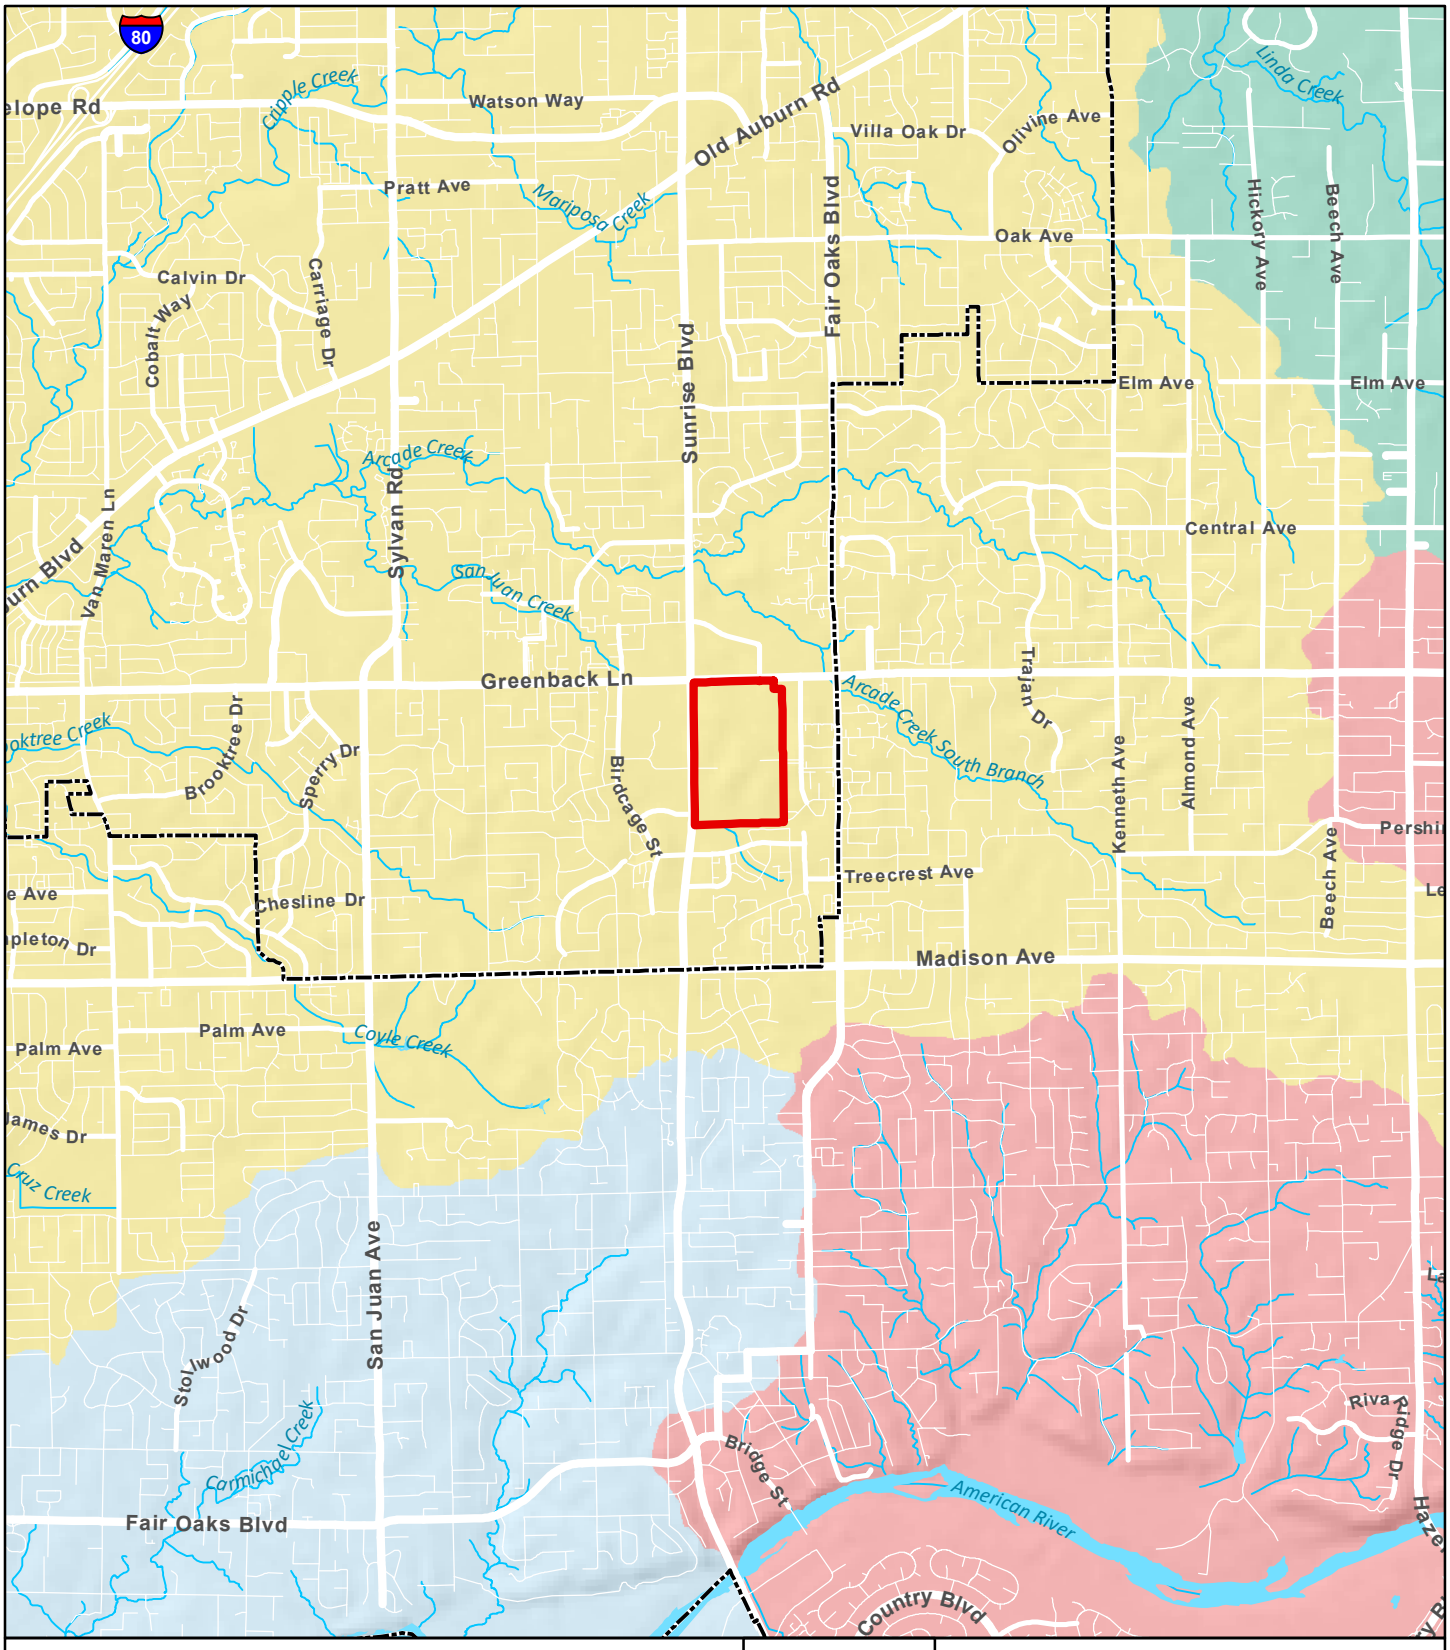
Impact 3.7-5: Specific Plan implementation would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan (Less than Significant)

The Water Quality Control Plan for the Central Valley Region and the Groundwater Sustainability Plan (GSP) are the two guiding documents for water quality and sustainable groundwater management in the Plan Area. Consistency with the two plans is discussed below.

WATER QUALITY CONTROL PLAN FOR THE CENTRAL VALLEY REGION

The Water Quality Control Plan for the Central Valley Region (Basin Plan) includes a summary of beneficial water uses, water quality objectives needed to protect the identified beneficial uses, and implementation measures. The Basin Plan establishes water quality standards for all the ground and surface waters of the region. The RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under a number of programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes, where known.

As discussed in Impacts 3.7-1 and 3.7-2, impacts related to water quality during construction and operation of future projects in the SPA would be less than significant. Through compliance with future site-specific SWPPPs, the proposed Specific Plan would have a less than significant impact on storm water quality relative to construction. Additionally, the Specific Plan would have a less than significant impact on water quality associated with project operations through compliance with City General Plan policies, City Municipal Code requirements, and proposed Specific Plan policies. Thus, the proposed Specific Plan would have a ***less than significant*** impact relative to the Water Quality Control Plan for the Central Valley Region.



GROUNDWATER SUSTAINABILITY PLAN

As part of a partnership of local municipal water purveyors, irrigation districts, a flood control district, and the overlying county, the CSCGMP was prepared in conformance with SCWA. The objectives of the CSCGMP have been developed to monitor, protect, and sustain groundwater within the region. The City of Citrus Heights and the other participating agencies subsequently adopted the groundwater management plan in 2006.

As discussed in Impact 3.7-3, Specific Plan implementation would not decrease groundwater supplies or interfere substantially with groundwater recharge such that the Specific Plan may impede sustainable groundwater management of the basin. Upon full buildout, the Plan Area would have an increase in the amount of pervious surfaces on-site compared to the existing condition due to the proposed park, open space, and landscape areas. This could result in a decrease in the volume of stormwater runoff from the Plan Area, which is considered a beneficial impact to groundwater recharge. The required stormwater BMPs would be designed to reduce runoff below that which occurs currently during storm events and ensure groundwater recharge from the Plan Area to the MEP. As described earlier, with the Specific Plan proposing items such as a public park, open landscape areas, and multiple locations to catch surface drainage, the total impervious surface area would be reduced when compared to existing conditions, which would result in an overall reduction in surface runoff. Additionally, the Specific Plan water demand is not expected to exceed the City's supplies in any normal, single dry, or multiple dry year between 2020 and 2040.

CONCLUSION

Overall, implementation of the proposed Specific Plan would have a ***less than significant*** impact related to conflicts with a water quality control plan or sustainable groundwater management plan.

The purpose of this EIR section is to identify the existing land use conditions in the Plan Area and the surrounding areas, and analyze the Specific Plan's consistency with relevant planning documents and policies. Information in this section is based primarily on information provided by the Specific Plan team, site surveys conducted by De Novo Planning Group in 2020, ground and aerial photographs, and the following reference documents:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- City of Citrus Heights Zoning Code;
- *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy and Draft EIR* (SACOG, November 2019); and
- *Sunrise Mall Market Impact Analysis* (MXD Development Strategists, October 2020).

No comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic.

3.8.1 ENVIRONMENTAL SETTING

PLAN AREA

The 95.8-acre Plan Area is part of the Sunrise Marketplace Business Improvement District (BID) located in the Citrus Heights city limits and is developed with the Sunrise Mall and associated parking areas. The Plan Area is located at the southeast corner of Sunrise Boulevard and Greenback Lane and is made up by the following Sacramento County Assessor Parcel Numbers (APNs): 243-0192-012 through 243-0192-018. The elevation of the site ranges from approximately 170 feet to 180 feet above mean sea level (MSL).

Since opening in 1972, Sunrise Mall has been a major commercial and social center of Citrus Heights, and generations of residents and visitors have patronized its many businesses and community events. The Sunrise Mall offers over 90 retailers including Macys and JCPenney in the heart of the Sunrise Marketplace BID. The Sunrise Marketplace BID is the ten-block area of the City along Greenback Lane between Birdcage Street and Fair Oaks Boulevard and along Sunrise Boulevard between Madison Avenue and just north of Arcadia Drive (City of Citrus Heights, 2011). The Sunrise Marketplace BID is a benefit assessment district whose purpose is to provide improvements and activities which constitute and create special benefit to assessed parcels. The Sunrise Marketplace provides local jobs, a myriad of shopping opportunities, personal and business services, office space, and generates a significant share of city sales tax revenue.

SURROUNDING LAND USES

As shown in Figure 2.0-2, the Plan Area is located in a highly urbanized and commercial area of Citrus Heights. The Citrus Town Center and Marketplace at Birdcage shopping centers, consisting of various big box commercial vendors, retail, grocery store, and restaurant uses are located to the

north and west of the Plan Area, respectively. In addition, to the north of the Plan Area past the Citrus Town Center includes the 56-acre Mitchell Farms Subdivision, which was approved in August 2018 to convert the Sunrise Golf and Disc Golf into a 260 single-family residential subdivision divided into five villages separated with open space buffers. The Plan area is also bordered on the south and east by a mix of residential uses, including single-family homes and apartment complexes. Additionally, various commercial and office uses are located to the south of the Plan Area, along Sunrise Boulevard and to the east along Greenback Lane.

GENERAL PLAN LAND USE AND ZONING DESIGNATIONS

The General Plan Land Use Map designates the Plan Area as General Commercial (GC) (see Figure 2.0-14 of Chapter 2.0, Project Description). The General Plan land uses surrounding the site include: GC to the north and west, Business Professional (BP) and Medium Density Residential (MDR) to the south, and General Commercial (GC), BP, and MDR to the east. The General Plan land use designations for the Plan Area and surrounding lands are described as follows:

Medium Density Residential. The MDR designation provides for single family detached and attached homes, duplexes, triplexes, fourplexes, multi-family residential units, group quarters, public and quasi-public uses, and similar and compatible uses. Residential densities shall be in the range of 9-20 units per net acre. The floor area ratio (FAR) for nonresidential uses shall not exceed 0.5. This is the predominant land use category of the City's neighborhoods adjacent to commercial corridors.

General Commercial. The GC designation provides for retail uses, services, restaurants, professional and administrative offices, hotels and motels, mixed-use projects, multi-family residences, public and quasi-public uses, and similar and compatible uses. The FAR for nonresidential uses shall not exceed 0.6. Residential densities shall not exceed 40 units per net acre.

Business Professional. The BP designation provides for office uses, including uses supportive of offices, public and quasi-public uses, mixed-use projects, multi-family and similar and compatible uses. The FAR for nonresidential uses shall not exceed 0.5. Residential densities shall not exceed 20 units per net acre.

The Plan Area is currently zoned Shopping Center (SC) by the Citrus Heights Zoning Map.

Shopping Center. The SC zoning district is applied to areas appropriate for a wide range of retail and service land uses, promoting the unified grouping of these uses with convenient off-street parking and loading. Residential uses may also be accommodated as part of mixed use projects. Residential densities shall not exceed 40 units per net acre. Projects within this zone are intended to be designed to be an integral part of the surrounding neighborhood, and the larger community. The SC zoning district is consistent with the General Commercial land use designation of the General Plan.

3.8.2 REGULATORY SETTING

STATE

Government Code

California Government Code Section 65300 et seq. establishes the obligation of cities and counties to adopt and implement general plans. The general plan is a comprehensive, long-term, and general document that describes plans for the physical development of a jurisdiction and of any land outside its boundaries that, in the jurisdiction's judgment, bears relation to its planning. The general plan addresses a broad range of topics, including, at a minimum, land use, circulation, housing, conservation, open space, noise, and safety. In addressing these topics, the general plan identifies the goals, objectives, policies, principles, standards, and plan proposals that support the jurisdiction's vision for the area. The general plan is a long-range document that typically addresses the physical character of an area over a 20-year period. Although the general plan serves as a blueprint for future development and identifies the overall vision for the planning area, it remains general enough to allow for flexibility in the approach taken to achieve the plan's goals.

The State Zoning Law (California Government Code Section 65800 et seq.) establishes that zoning ordinances, which are laws that define allowable land uses within a specific district, are required to be consistent with the general plan and any applicable specific plans. When amendments to the general plan are made, corresponding changes in the zoning ordinance may be required within a reasonable time to ensure the land uses designated in the general plan would also be allowable by the zoning ordinance (Government Code, Section 65860, subd. [c]).

REGIONAL

Sacramento Area Council of Governments

The Sacramento Area Council of Governments (SACOG) is an association of local governments from six counties and 22 cities within the Sacramento Region. The counties include El Dorado, Placer, Sacramento, Sutter, Yolo, and Yuba. SACOG is responsible for the preparation of, and updates to, the Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for the region and the corresponding Metropolitan Transportation Improvement Program (MTIP). The MTP/SCS provides a 20-year transportation vision and corresponding list of projects. The MTIP identifies short-term projects (seven-year horizon) in more detail. The 2020 MTP/SCS was adopted by the SACOG board in November 2019.

METROPOLITAN TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY

The MTP/SCS is a long-range plan that addresses land use, transportation improvements, air quality, and greenhouse gas emissions in the region. The MTP/SCS supports the Sacramento Region Blueprint, which implements smart growth principles, including housing choice, compact development, mixed-use development, natural resource conservation, use of existing assets, quality design and transportation choice. It also provides increased transportation options while reducing

congestion, shortening commute times, and improving air quality. The plan is based on projections for growth in population, housing, and jobs. SACOG determines the regional growth projections by evaluating baseline data (existing housing units and employees, jobs/housing ratio, and percent of regional growth share for housing units and employees), historic reference data (based upon five- and ten-year residential building permit averages and historic county-level employment statistics), capacity data (General Plan data for each jurisdiction), and current MTP data about assumptions used in the most recent MTP/SCS.

LOCAL

City of Citrus Heights General Plan

California Government Code, Section 65300, requires each county and city to adopt a general plan to guide development. The General Plan establishes a city's development goals and policies; sets the land use, housing, and development policies for a city; and designates allowable land uses for all property throughout the city. The Citrus Heights General Plan, adopted in August 2011, sets forth goals, policies, and implementation measures to guide land use and development within its planning area. The Citrus Heights General Plan includes five chapters, which address the following 10 topics:

- Circulation;
- Conservation;
- Housing;
- Land Use;
- Noise;
- Open Space;
- Safety;
- Climate Change;
- Complete Streets; and
- Water Quality and Flooding.

California planning law dictates that all land use decisions be consistent with the implementing jurisdiction's adopted General Plan. Therefore, the proposed Specific Plan must be consistent with the City's General Plan and the City's Zoning Ordinance.

GENERAL PLAN LAND USE MAP

The Land Use Map portrays the anticipated uses of land in and around Citrus Heights through land use designations. The General Plan includes nine residential, commercial, industrial, and other land use designations to depict the types of land uses that will be allowed in the General Plan Area. Each land use designation is defined in terms of the allowable uses and density and intensity standards.

GENERAL PLAN GOALS AND POLICIES

General Plan goals and policies applicable to environmental issues associated with land use are summarized below. General Plan policies associated with specific environmental topics (aesthetics, air quality, biological resources, cultural resources, geology/soils, hazards, hydrology/water quality, housing, noise, parks, public services, transportation, utilities, etc.) are discussed in the relevant chapters of this EIR.

Goal 1: Ensure quality development by establishing and maintaining an orderly land use pattern.

Policy 1.1: Development in the City shall occur as shown on *Map 1: Land Use Diagram* and *Table 4: Land Use Designations.*

Policy 1.2: Encourage merger of parcels to create larger parcels and more usable properties.

Goal 2: Preserve the unique character of Citrus Heights, and create a distinctive community identity.

Policy 2.1: Distinguish Citrus Heights from other communities through quality development that typifies the City's desired image.

Policy 2.2: Preserve the City's small-town attributes and sense of community.

Policy 2.3: Maintain a high level of services for all citizens, including high standards of public safety.

Policy 2.4: Preserve individual neighborhoods and promote a prosperous business community.

Goal 3: Preserve the unique character of Citrus Heights, and create a distinctive community identity.

Policy 3.1: Recognize and reinforce the City's individual neighborhoods.

Policy 3.3: Preserve and enhance the best qualities of Citrus Heights' neighborhoods, including well-maintained buildings and landscaping, well-maintained public infrastructure, and high levels of personal safety and security.

Policy 3.4: Enhance the visual quality of City neighborhoods.

Policy 3.5: Plan, design, and construct neighborhood streets to encourage walking and bicycling while discouraging high vehicle speeds and volumes consistent with Policy 29.1.

Goal 4: Ensure that new development is compatible within its neighborhood

Policy 4.1: Require new residential development to maintain or enhance the positive characteristics of the surrounding neighborhood.

Policy 4.2: Ensure that decisions concerning land use and development are not detrimental to the positive character and identity of existing residential neighborhoods in Citrus Heights.

Policy 4.5: Ensure that requests for rezonings to increase the allowable residential density in all neighborhoods shall only be approved for projects providing superior design and enhanced community benefit. It shall be the responsibility of the applicant to demonstrate how the rezoning will allow for the development of a project that exceeds the City's minimum requirements by proving superior design and enhanced community benefit. In addition, rezonings shall only be approved if the following findings can be made:

- The proposed rezoning shall result in a project that contributes to and enhances the best characteristics of the surrounding neighborhood.
- The applicant has demonstrated that the increased density will not negatively impact storm drainage within the local area. Proponents shall be required to provide adequate topographic and flow characteristics information to demonstrate their project will not contribute to or worsen any flooding problems in the locale.
- The applicant has demonstrated that adequate public infrastructure, including streets, water, and sewer, is available to serve the project.
- The proposed rezoning will assist the City in meeting the goals of the General Plan.

Goal 8: Maintain the economic strength of retail centers by focusing retail activities at major intersections.

Policy 8.1: Locate retail businesses at or near major intersections.

Policy 8.2: Discourage spot retail commercial developments and the creation of new strip commercial areas. Focus new retail uses within the retail nodes identified on Map 3.

Policy 8.3: Support the creation of transit centers near Greenback Lane/Sunrise Boulevard and Greenback Lane/Auburn Boulevard.

Goal 9: Revitalize and maintain corridors as economically viable and physically attractive.

Policy 9.1: Where appropriate, provide opportunities for a mix of low-intensity nonresidential land uses in residential sections of major corridors that will support attractive and healthy work and living environments.

Policy 9.2: Provide opportunities for mixed-use projects within commercial corridors.

Goal 11: Maintain and strengthen Sunrise Marketplace as the heart of commercial activity in Citrus Heights.

Policy 11.1: Actively seek to attract, retain and expand commercial activities at Sunrise Marketplace.

Policy 11.2: Locate office buildings in Sunrise Marketplace to increase the vitality of the area.

Policy 11.3: Promote new regional and community-oriented commercial development within Sunrise Marketplace that is compatible and supportive of existing uses.

Goal 12: Create an inviting and distinctive identity for Sunrise Marketplace to promote its image as the City's premier destination to shop, work, live, and play.

Policy 12.1: Implement the Sunrise Marketplace Revitalization Blueprint to enhance the physical appearance of the district, create a recognizable destination, establish a sense of place, and promote private investment in the area.

Policy 12.3: Transform the Sunrise Mall area into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play.

Goal 13: Increase activity in the Sunrise MarketPlace through transportation investments that enhance the convenience and safety of driving, riding transit, bicycling, and walking to, from, and within the district.

Policy 13.1: Improve mobility in the Sunrise MarketPlace area to provide adequate access for vehicles, transit, bicycles and pedestrians.

Policy 13.2: Create convenient connections across Sunrise Boulevard for vehicles, bicycles, pedestrians and transit.

Policy 13.3: Promote installation of additional, distinctive transit stops at key activity areas and encourage covered shelters at existing and new stops.

Policy 13.4: Facilitate the development of new buildings in areas currently devoted to parking to shorten distances between buildings and foster better pedestrian connections between shopping centers.

Goal 23: Support adequate locations and facilities for local and neighborhood gatherings.

Policy 23.1: Support the use of available facilities for community gatherings.

Policy 23.2: Incorporate plazas or other public outdoor activity spaces into public and private development projects.

Goal 26: Develop, conserve, and improve the housing stock to ensure decent accommodations for all segments of the community.

Policy 26.2: Promote construction of housing types with a variety of prices, styles, and designs.

Policy 26.3: Promote improvements and rehabilitation to enhance the quality of multi-family developments.

Policy 26.4: Promote high-quality multi-family developments that include appropriate design, scale, and amenities.

Goal 28: Ensure housing opportunities for all segments of the community.

Policy 28.5: Encourage development of a variety of sizes, design, and styles of housing so that residents will be encouraged to stay in Citrus Heights as their housing needs change.

Goal 29: Plan, design, construct, and manage a Complete Streets transportation network that accommodates the needs of all mobility types, users and ability levels.

Policy 29.4: Support safe, complete and well-connected neighborhood street, bicycle, and pedestrian access and connections that balance circulation needs with the neighborhood context.

Goal 30: Promote attractive and well-maintained roadways and sidewalks.

Policy 30.1: Improve aesthetic features along the City's roadways and maintain landscaping in an efficient and timely manner especially when it enhances the walking and biking environment.

Goal 34: Preserve, protect and enhance natural habitat areas, including creek and riparian corridors, oak woodlands, and wetlands.

Policy 34.1: Preserve continuous riparian corridors and adjacent habitat along the City's creeks and waterways.

Goal 38: Establish a system of creekside trails, passive open space and parks for public use.

Goal 39: Create open spaces in future urban development with natural features for public use and enjoyment.

Policy 39.1: Provide for appropriate open space amenities in new development, protecting existing usable open space to the extent feasible.

Policy 39.2: Require new development to provide linkages to existing and planned open space systems.

Goal 43: Preserve and protect places that embody the City's social, architectural and agricultural history.

City of Citrus Heights Zoning Code

The City of Citrus Heights Zoning Code is a codification of the ordinances of the City related to Zoning. The source materials used in the preparation of the code were the Sacramento County Code adopted by the city shortly after incorporation and ordinances subsequently adopted by the City Council. The purpose of the City of Citrus Heights Zoning Ordinance (Title 106 of the Citrus Heights Municipal Code) is to implement the goals, policies, and objectives of the Citrus Heights General Plan. The Zoning Ordinance regulates all land uses and development within the City by requiring proposed land uses, buildings, structures, and land division to comply with the regulations set forth for each zoning district.

SPECIAL PLANNING AREA

The Specific Plan is requesting a rezone to Special Planning Area (SPA). The Special Planning Area zoning district is intended to provide for flexibility in the application of Zoning Code standards to proposed developments under limited and unique circumstances. The purpose is to allow consideration of innovation in site planning and other aspects of project design, and more effective design responses to site features, uses on adjoining properties, and environmental impacts than the Zoning Code standards would produce without adjustment. The city expects each project within a Special Planning Area to be of obvious, significantly higher quality than would be achieved through conventional design practices and standards.

The Council may approve or approve a special planning area after finding all of the following findings, in addition to those required for a rezoning by Section 106.74.060 of the Citrus Heights Municipal Code. If the Council does not make all of these findings, the Special Planning Area shall not be approved.

A. The project is consistent with the General Plan and any applicable specific plan;
B. The project complies with all applicable provisions of this Zoning Code other than those modified by the SPA ordinance;
C. The approved modifications to the development standards of this Zoning Code are necessary and appropriate to accommodate the superior design of the proposed project, its compatibility with adjacent land uses, and its successful mitigation of any identified environmental impacts;
D. The project complies with all applicable provisions of the City's Design Guidelines;
E. The project can be adequately, conveniently, and reasonably served by public facilities, services, and utilities;
F. The planning concepts and design features of the project are reasonably suited to the characteristics of the site and the surrounding neighborhood;
G. The location, size, planning concepts, design features, and operating characteristics of the project are and will be compatible with the character of the site, and the land uses and development intended for the surrounding neighborhood by the General Plan;

H. The site is adequate for the project in terms of size, shape, topography, and circumstances; and
I. The establishment, maintenance, or operation of the use would not, under the circumstances of the particular case, be detrimental to the health, safety, or general welfare of persons residing or working in the neighborhood of the proposed use, or detrimental or injurious to property and improvements in the neighborhood or to the general welfare of the City.

3.8.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on land use and planning if it will:

- Physically divide an established community; and/or
- Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

IMPACTS AND MITIGATION MEASURES

Impact 3.8-1: Specific Plan implementation would not physically divide an established community (Less than Significant)

The proposed Specific Plan establishes the City's vision for future growth and development within the Plan Area. The proposed Specific Plan is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California, and is the site of the existing Sunrise Mall and associated parking areas, as shown on Figure 2.0-3 located in Chapter 2.0, Project Description.

The 95.8-acre Plan Area is part of the Sunrise Marketplace Business Improvement District (BID), which serves as the core commercial and social center of Citrus Heights. While Sunrise Mall was once a regional destination, newer and more exciting forms of retail have been developed over the past several decades, truncating the properties destination appeal from adjacent jurisdictions. According to the City's General Plan, the Sunrise Marketplace is in need of a vibrant, distinct identity to remain a major regional draw and top revenue source for the City due to competition from the development of large commercial centers in surrounding communities. Given the changing retail environment and economic conditions, the City Council adopted an Amendment to the General Plan in 2018 that requires the development of a Specific Plan for the Sunrise Mall property to guarantee a comprehensive plan for future redevelopment of the mall as a means to ensure the continued success of the City's core.

The proposed Plan would allow for the future development of up to 2,220 residential dwelling units (DU), up to 480 hotel rooms, up to 320,000 square feet (SF) of retail uses, up to 960,000 SF of office uses, up to 450,000 SF of community/institutional land uses, parking and other vehicular and non-

vehicular circulation improvements, park and open space facilities, and utility improvements. The purpose of the Sunrise Tomorrow Specific Plan is to guide the redevelopment of the Sunrise Mall to transform the Plan Area into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with the City's General Plan Goal 12 and Policy 12.3. Further, the proposed Specific Plan would define allowed land uses to ensure a mix of development that supports a livable, mixed-use, urban neighborhood, consistent with General Plan Policy 9.2.

Development allowed under the Specific Plan would require new roadway improvements and pedestrian pathways to connect the Plan Area to the existing circulation system and create connections and to allow access to and from the site and to other areas of the City. The proposed Specific Plan aims to establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns. As such, development of the Specific Plan Area would not result in any substantial physical barriers, such as a highway, or other division, that would divide an existing community, but would instead enhance the connectivity from the Plan Area to adjacent land uses through improved vehicular roadways and pedestrian and bicycle paths and lanes, and develop a cohesive network of land uses that would result in greater connectivity within the Plan Area.

Additionally, according to the Sunrise Mall Market Analysis Report prepared by MXD Development Strategists (see Appendix E), buildout of the Specific Plan would not result in significant impacts to the surrounding retail, office, and residential uses. As of January 2020, the Sunrise Mall property has a leasable floor area of 1.125 million square feet, which includes the vacant Sears anchor space and standalone buildings. While the proposed Specific Plan would result in an overall net loss of retail space, the Specific Plan would facilitate the development of new multi-family units, which would activate the Plan Area and generate further spending potential that would be captured on-site and at neighboring retail properties, such as the Marketplace at Birdcage and Citrus Heights Town Center. Further, Citrus Heights has one of the smallest inventories of office space in the region, resulting in professional, corporate and government tenants to overlook Citrus Heights. According to the Sunrise Mall Market Impact Analysis (MXD Development Strategists, 2020), the Greater Sacramento Economic Council has stated that there is an acute shortage of Class A office space with larger 25,000 to 50,000 square foot floorplates. To attract large companies, the Greater Sacramento region needs to provide newer and larger office product in amenity-rich environments. Lastly, the Greater Sacramento multi-family residential market has seen strong demand in recent years that is driven primarily by healthy employment growth and in-migration from Southern California and the Bay Area. Housing supply in Greater Sacramento has not kept pace with demand, resulting in rents continuing to increase while vacancy decreases. New high-quality housing built on the Sunrise Mall property would provide the City of Citrus Heights with a residential property type that is currently not available in the City but is much needed. The mixed-use, amenity rich, and walkable nature of the development would also lend itself to creating an environment that will entice a younger

professional demographic considering Citrus Heights as a home as well as result in greater community connectivity.

Because the overall purpose of the proposed Specific Plan is consistent with the vision for the Plan Area established in the General Plan, as well as other infrastructure improvements required to accommodate new development, implementation of the proposed Specific Plan would not adversely impact community connectivity nor divide the physical arrangement of the community. Therefore, this impact would be considered ***less than significant***.

Impact 3.8-2: Specific Plan implementation would not conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the Specific Plan adopted to avoid or mitigate an environmental effect (Less than Significant)

The proposed Specific Plan would establish the land use planning and regulatory guidance, including the land use and zoning designations and policies, for the approximately 95.8-acre Plan Area. The following provides a description of the proposed Specific Plan's consistency with existing land use plans, policies, and regulations that govern land uses within the Plan Area.

CITRUS HEIGHTS GENERAL PLAN

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The Citrus Heights General Plan currently designates the Plan Area as General Commercial by the City's General Plan Land Use Map. The densities and intensities proposed by the Specific Plan are not supported by the existing General Commercial land use designation. As such, the proposed Specific Plan would require an amendment to the Citrus Heights General Plan to create a new land use designation, Marketplace Mixed Use, to allow for a mix of development that supports a livable urban neighborhood, including residential, retail/food/beverage, mixed-use, office, community/institutional, and hotel uses. The General Plan Amendment would consist of a text amendment to create the new Marketplace Mixed Use land use designation and a map amendment to apply the new designation only to the Plan Area.

As described in Chapter 2.0, Project Description, the Plan Area is divided into six sub-Planning Areas (PA). The General Plan Amendment to Marketplace Mixed Use would permit the following Maximum Development Allowance of each Planning Area:

1. **PA-1** is 17.2 acres located in the northwestern corner of the Plan Area. PA-1 is envisioned to be an employment anchor with office space resulting in the development of 220 residential units, 120 hotel rooms, 60,000 sf of retail uses, 280,000 sf of office uses, and 24,000 sf of community institutional uses. The allowed FAR of PA-1 is 0.70.
2. **PA-2** is 23.3 acres located in the west-central portion of the Plan Area. PA-2 is envisioned as the "Mixed-Use Core" developed with retail, restaurants, office, multi-family residential units and a hotel all positioned around the Sunrise Commons central gathering space and the main street. Full buildout of PA-2 would result in 620 residential units, 240 hotel rooms,

160,000 sf of retail uses, 220,000 sf of office uses, and 34,000 sf of community institutional uses and a FAR of 1.55.

3. **PA-3** is 21.3 acres located in the southwestern corner of the Plan Area. PA-3 is envisioned as the "Anchor Entertainment" with retail and entertainment uses. In addition, the Planning Area is envisioned as a residential hub with stacked flats, townhouses, and senior housing units. Full buildout of PA-3 would result in 360 residential units, 52,000 sf of retail uses, and 12,000 sf of community/institutional uses and a FAR of 0.75.
4. **PA-4** is 12.7 acres located in the southeastern portion of the Plan Area. PA-4 is envisioned as "Anchor Retail and Mixed-Use" with retail uses along the main street. A portion of PA-4 would also feature town houses. Full buildout of PA-4 would result in 480 residential units, 20,000 sf of retail uses, 220,000 sf of office uses, and 12,000 sf of community/institutional uses and a FAR of 1.0.
5. **PA-5** is 18.1 acres located in the east-central portion of the Plan Area. PA-5 is envisioned as "Anchor Retail and Mixed-Use" along the main street with retail uses. A portion of PA-5 would also feature town houses. Full buildout of PA-5 would result in 540 residential units, 20,000 sf of retail uses, 240,000 sf of office uses, and 220,000 sf of community/institutional uses and a FAR of 1.0.
6. **PA-6** is 3.2 acres located in the northeastern corner of the Plan Area. PA-6 is envisioned to contain a hotel and restaurant uses. At full buildout, PA-6 would consist of 120 hotel rooms, 8,000 sf of retail uses, and 8,000 sf of community/institutional uses and a FAR of 0.5.

In total, the 95.8-acre Plan Area could be developed with up to 2,220 residential Dwelling Units, up to 480 hotel rooms, up to 320,000 SF of retail uses, up to 960,000 SF of office uses, and up to 450,000 SF of community/institutional land uses. Upon approval of the General Plan Amendment, the Specific Plan would be consistent with the General Plan and General Plan Land Use Map.

The proposed Specific Plan is consistent with goals and policies of the General Plan Community Development Element, including those identified above under the Regulatory Setting. As described in Chapter 2.0, Project Description, the City Council adopted an Amendment to the General Plan that requires the development of a Specific Plan for the Sunrise Mall property to guarantee a comprehensive plan for future redevelopment of the mall. Therefore, the proposed Specific Plan and General Plan Amendment is consistent with CD Goal 11 for the maintenance and strengthening of the Sunrise Marketplace as the heart of commercial activity in Citrus Heights. Additionally, implementation of the Specific Plan and General Plan Amendment would provide and allow for opportunities of mixed use projects within commercial corridors (CD Policy 9.2), as well as provide for a mix of low- and high-intensity non-residential uses adjacent to existing residential neighborhoods to support attractive and healthy work and life environments (CD Policy 9.1). The purpose of the Sunrise Tomorrow Specific Plan is to guide the redevelopment of the Sunrise Mall to transform the Plan Area into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with the City's General Plan Community Development Element (CD) Goal 12 and Policy 12.3.

The proposed Specific Plan would make a number of transportation investments enhancing the convenience and safety of driving, riding transit, bicycling, and walking to, from, and within the Plan

Area, implementing CD Goal 13. For example, the Specific Plan includes streets designed for people, with a network of safe and slow speed streets that serve pedestrians and cyclists while allowing vehicular access and enhancing mobility, consistent with CD Policy 13.1, Policy 13.2, and Policy 29.4. Additionally, the Specific Plan provides for safe, convenient, and accessible access to high quality transit corridors with frequent headways and enhanced transit stops, consistent with CD Policy 13.3. The Specific Plan and General Plan Amendment would also establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns, consistent with CD Policy 13.4, Policy 22.1, and Goal 23. Additionally, this would be consistent with CD Goal 30, which states the City should promote attractive and well-maintained roadways and sidewalks, as well as CD Policy 30.1, which states the City should improve aesthetic features along the City's roadways and maintain landscaping in an efficient and timely manner especially when it enhances the walking and biking environment.

The proposed Specific Plan and General Plan Amendment would allow for the development and overall improvement to the City's housing stock to ensure decent accommodations for all segments of the community, consistent with CD Goal 26. One of the objectives of the Specific Plan is to create connected communities with various housing options and high quality of life by providing townhomes, lifestyle housing, senior housing, and mixed use residential, consistent with General Plan CD Policy 26.2 through Policy 26.4. Further, the Specific Plan strives to provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential, consistent with CD Goal 28. Additionally, this is consistent with CD Policy 28.5, which states that the City should encourage the development of a variety of sizes, designs, and styles of housing so that residents will be encouraged to stay in Citrus Heights as their housing needs change.

The Specific Plan is also consistent with the goals, policies, and actions of the General Plan Resource Conservation Element (RC). As part of the proposed Specific Plan, an existing on-site creek, San Juan Creek, along Sunrise Boulevard (located in the southwestern corner of the Plan Area) could be restored along with the associated native riparian habitat. This is consistent with RC Goal 43, which states the City should preserve, protect and enhance natural habitat areas, including creek and riparian corridors, oak woodlands, and wetlands. A public trail could be provided adjacent to the restored creek, which is consistent with RC Policy 34.1 for the preservation of continuous riparian corridors and adjacent habitat along the City's creeks and waterways. The development of a creek side trail would also be consistent with RC Goal 38, which states the City should establish a system of creek side trails, passive open space and parks for public use. The Specific Plan also proposes to create a green network of parks, plazas, and streets that are safe and connected with an abundance of sustainably grown vegetation. The creation of a green network of parks, plazas, and streets throughout the urban development is consistent with RC Goal 39, as well as with RC Policy 39.1 and Policy 39.2.

As demonstrated above, the proposed Specific Plan would be consistent with the relevant General Plan policies. Thus, the proposed Specific Plan would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or

mitigating an environmental effect. This is considered a ***less than significant*** impact and no mitigation is required.

ZONING CODE

The Plan Area is currently zoned Shopping Center. The applicant is requesting a rezone to SPA. The SPA zoning would establish development standards and design guidelines to ensure quality and consistency in the design and implementation of the Specific Plan. The purpose of this zoning district is to allow consideration of innovation in site planning and other aspects of project design, and more effective design responses to site features, uses on adjoining properties, and environmental impacts than the Zoning Code standards would produce without adjustment. The Specific Plan document is regulatory in nature and would serve as zoning for the Plan Area. Development plans, subdivision maps, and site plans for subsequent projects must be consistent with the proposed Specific Plan. With the requested rezone and required Specific Plan consistency, the Plan Area would be consistent with the City's Zoning Code and this impact would be ***less than significant***.

METROPOLITAN TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY

The MTP/SCS provides a long-term regional plan for growth that is intended to address transportation, growth, air quality, and sustainability in the region. The goals of the MTP/SCS are to link land use and transportation facilities and programs in a way that provides long-term environmental and social benefits, including shortened commute times, reduced traffic congestion, less dependence on automobiles, improved air quality, reduced GHG emissions, and housing choices more aligned with the changing demographic of the Sacramento region. Although the MTP/SCS is not a land use plan, its success is based on certain assumptions about land use and development. The MTP/SCS is federally required to be updated every for years with the most recent MTP/SCS being the 2020 MTP/SCS adopted on November 18, 2019.

The proposed Specific Plan is designated with the Center/Corridor Community type in the 2020 MTP/SCS (2020 MTP/SCS Figure 2-2), which is defined as historic downtowns, main streets, commercial corridors, rail station areas, central business districts, town centers, or other high-density destinations. Center/Corridor Communities typically have more compact development patterns, a greater mix of uses, and a wider variety of transportation infrastructure compared to the rest of the region. The Specific Plan would provide for development of higher density residential and nonresidential uses in a location near several bus routes. Therefore, the proposed Specific Plan is consistent with the general uses envisioned for the site in the MTP/SCS.

In addition, the Specific Plan facilitates the future development of mixed-use residential and commercial neighborhood areas, walkable street grids, and bike facilities, which would reduce reliance on automobiles for transportation. The Specific Plan also provides for a high level of bicycle and pedestrian connectivity throughout the Plan Area, including non-auto connections to the parks, open space, and trails features of the Plan Area. Additionally, the Specific Plan provides for the future development of a transit center along Sunrise Boulevard designed to host conventional busses as well as adaptable to meet the future transit needs of the community. As previously mentioned, the Specific Plan may include the restoration of an existing on-site creek along Sunrise

Boulevard (located in the southwestern corner of the Plan Area), preserving aquatic resources on the site. One of the objectives of the Specific Plan is to provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential. As described in Sections 3.2, Air Quality, 3.5, Greenhouse Gases and Energy, and 3.12, Transportation and Circulation, of this Draft EIR, comprehensive features and measures are provided by the Specific Plan to reduce GHG emissions, including use of renewable energy for the residential component of the Specific Plan, an EV charging network, and use of energy-efficient and water-conserving building and design practices. Development under the proposed Specific Plan would be consistent with the land use, density, and intensity of development anticipated in the 2020 MTP/SCS. The proposed Specific Plan is consistent with the goals established in the 2020 MTP/SCS and would promote the ability of SACOG and the region to achieve those goals. This is considered a ***less than significant*** impact and no mitigation is required.

PLANS, POLICIES, AND REGULATIONS ADOPTED TO ADDRESS OTHER IMPACTS

The Specific Plan's consistency with applicable federal, state, and local plans, policies, and regulations associated with aesthetics, air quality, biological resources, cultural and tribal cultural resources, geology and soils, greenhouse gases and energy, hazards and hazardous materials, hydrology and water quality, noise, public services and recreation, transportation and circulation, and utilities are addressed in the respective sections of this Draft EIR.

CONCLUSION

Overall, the Specific Plan would be consistent with the land use plans, policies, and regulations adopted to address environmental impacts, including the Citrus Heights General Plan, the City's Zoning Code, and the MTP/SCS. Therefore, the Specific Plan would have a ***less than significant*** impact.

This section provides a general description of the existing noise sources in the Specific Plan Area vicinity, a discussion of the regulatory setting, and identifies potential noise impacts associated with the Specific Plan. Project impacts are evaluated relative to applicable noise level criteria and to the existing ambient noise environment. Mitigation measures have been identified for significant noise-related impacts. This section is based on the Environmental Noise Assessment completed for the proposed Specific Plan (Saxelby Acoustics, 2021). See Appendix F.

There were no comments received during the public review period for the Notice of Preparation regarding noise.

As discussed in the Initial Study for the proposed Specific Plan (see Appendix A), the Specific Plan Area is not located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. The closest airport is the Sacramento McClellan Airport, located approximately 6.8 miles west of the Plan Area. As such, there is ***no impact*** related to exposure of persons or workers in the area to excessive airport noise levels.

3.9.1 ENVIRONMENTAL SETTING

KEY TERMS

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given area consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of noise.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, defined as ten times the logarithm of the ratio of the sound pressure squared over the reference pressure squared.
CNEL	Community noise equivalent level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.
Frequency	The measure of the rapidity of alterations of a periodic acoustic signal, expressed in cycles per second or Hertz.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
L_{dn}	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
L_{eq}	Equivalent or energy-averaged sound level.
L_{max}	The highest root-mean-square (RMS) sound level measured over a given period of time.

$L_{(n)}$	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L_{50} is the sound level exceeded 50 percent of the time during the one-hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
Noise	Unwanted sound.
SEL	Sound exposure levels. A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy into a one-second event.

FUNDAMENTALS OF ACOUSTICS

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. All noise levels reported in this section are in terms of A-weighted levels, but are expressed as dB, unless otherwise noted.

The decibel scale is logarithmic, not linear. In other words, two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound, and twice as loud as a 60-dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level (L_{eq}), which corresponds

to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The L_{eq} is the foundation of the composite noise descriptor, L_{dn}, and shows very good correlation with community response to noise.

The day/night average level (L_{dn}) is based upon the average noise level over a 24-hour day, with a +10-decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because L_{dn} represents a 24-hour average, it tends to disguise short-term variations in the noise environment. CNEL is similar to L_{dn}, but includes a +5-dB penalty for evening noise. Table 3.9-1 lists several examples of the noise levels associated with common situations.

TABLE 3.9-1: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	*NOISE LEVEL (DBA)*	*COMMON INDOOR ACTIVITIES*
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft)	--100--	
Gas Lawn Mower at 1 m (3 ft)	--90--	
Diesel Truck at 15 m (50 ft), at 80 km/hr (50 mph)	--80--	Food Blender at 1 m (3 ft) Garbage Disposal at 1 m (3 ft)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft)	--70--	Vacuum Cleaner at 3 m (10 ft)
Commercial Area Heavy Traffic at 90 m (300 ft)	--60--	Normal Speech at 1 m (3 ft)
Quiet Urban Daytime	--50--	Large Business Office Dishwasher in Next Room
Quiet Urban Nighttime	--40--	Theater, Large Conference Room (Background)
Quiet Suburban Nighttime	--30--	Library
Quiet Rural Nighttime	--20--	Bedroom at Night, Concert Hall (Background)
	--10--	Broadcast/Recording Studio
Lowest Threshold of Human Hearing	--0--	Lowest Threshold of Human Hearing

SOURCE: CALTRANS, TECHNICAL NOISE SUPPLEMENT, TRAFFIC NOISE ANALYSIS PROTOCOL. SEPTEMBER 2013.

EFFECTS OF NOISE ON PEOPLE

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction;
- Interference with activities such as speech, sleep, and learning; and
- Physiological effects such as hearing loss or sudden startling.

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it. With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a 1 dBA change cannot be perceived;
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference;
- A change in level of at least 5-dBA is required before any noticeable change in human response would be expected; and
- A 10-dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6 dB per doubling of distance from the source, depending on environmental conditions (i.e., atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING NOISE AND VIBRATION ENVIRONMENTS

Existing Noise Receptors

Some land uses are considered more sensitive to noise than others. Land uses often associated with sensitive receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Sensitive noise receptors may also include threatened or endangered noise sensitive biological species, although many jurisdictions have not adopted noise standards for wildlife areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

Sensitivity is a function of noise exposure (in terms of both exposure duration and insulation from noise) and the types of activities involved. In the vicinity of the Plan Area, sensitive land uses include existing single-family residential uses to the south of the Plan Area and multi-family residential uses to the east of the Plan Area.

Existing General Ambient Noise Levels

The existing noise environment in the Plan Area is primarily defined by traffic on Sunrise Boulevard and Greenback Lane.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted continuous (24-hour) noise level measurements at five locations in the Plan Area. Noise measurement locations are shown on Figure 3.9-1. A summary of the noise level measurement survey results is provided in Table 3.9-2. Appendix F contains the complete results of the noise monitoring.

The sound level meters were programmed to collect hourly noise level intervals at each site during the survey. The maximum value (L_{max}) represents the highest noise level measured during an interval. The average value (L_{eq}) represents the energy average of all of the noise measured during an interval. The median value (L_{50}) represents the sound level exceeded 50 percent of the time during an interval.

Larson Davis Laboratories (LDL) Model 820, Model 812, and Model 831 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with an LDL Model CAL200 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

TABLE 3.9-2: SUMMARY OF EXISTING BACKGROUND NOISE MEASUREMENT DATA

SITE	LOCATION	DATE	L_{DN}	AVERAGE MEASURED HOURLY NOISE LEVELS, dBA					
				DAYTIME (7AM-10PM)			NIGHTTIME (10PM-7AM)		
				L_{EQ}	L_{50}	L_{MAX}	L_{EQ}	L_{50}	L_{MAX}
LT-1	Northern Boundary of Project Site	8/19/20 to 8/20/20	67	64	61	84	59	53	78
LT-2	Western Boundary of Project Site	8/19/20 to 8/20/20	71	67	65	82	63	55	79
LT-3	Eastern Boundary of Project Site	8/19/20 to 8/20/20	54	52	47	72	46	42	67
LT-4	Southwestern Boundary of Project Site	8/19/20 to 8/20/20	63	63	53	86	52	47	73
LT-5	Southeastern Boundary of Project Site	8/19/20 to 8/20/20	61	61	48	81	52	42	74

SOURCE: SAXELBY ACOUSTICS, 2021.

It should be noted that traffic volumes during the noise measurement period were lower potentially due to the COVID-19 pandemic. This could have resulted in lower ambient noise levels than those that would occur under "normal" conditions. However, due to the logarithmic nature of sound, even if traffic volumes were down by 10 percent on Greenback Lane or Sunrise Boulevard, this would only yield an approximate noise reduction of 0.5 dBA. If volumes were down by as much as 50 percent, the noise reduction would be 3 dB which is still an imperceptible difference. Therefore, the COVID-19 pandemic is unlikely to have any substantial effect on the noise analysis.

Existing Traffic Noise Environment at Off-Site Receptors

To assess noise impacts due to project-related traffic increases on the local roadway network, traffic noise levels are predicted at sensitive receptors for existing and future, project and no-project conditions.

Existing and Cumulative noise levels due to traffic are calculated using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA RD-77-108). The model is based upon the Calveno reference noise emission factors for automobiles, medium trucks, and

heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To predict traffic noise levels in terms of L_{dn}, it is necessary to adjust the input volume to account for the day/night distribution of traffic.

Project trip generation volumes were provided by the project traffic engineer (Fehr & Peers, 2020), and truck usage and vehicle speeds on the local area roadways were estimated from field observations. The predicted increases in traffic noise levels on the local roadway network for Existing conditions are provided in terms of L_{dn}.

Table 3.9-3 summarizes the existing traffic noise levels at the nearest sensitive receptors along each roadway segment in the Plan Area. Appendix F provides the complete inputs and results of the FHWA traffic modeling.

TABLE 3.9-3: EXISTING TRAFFIC NOISE LEVELS

ROADWAY	*SEGMENT*	*EXTERIOR TRAFFIC NOISE LEVEL, DB L_{DN}*

3.9.2 REGULATORY SETTING

FEDERAL

There are no federal regulations related to noise that apply to the Specific Plan.

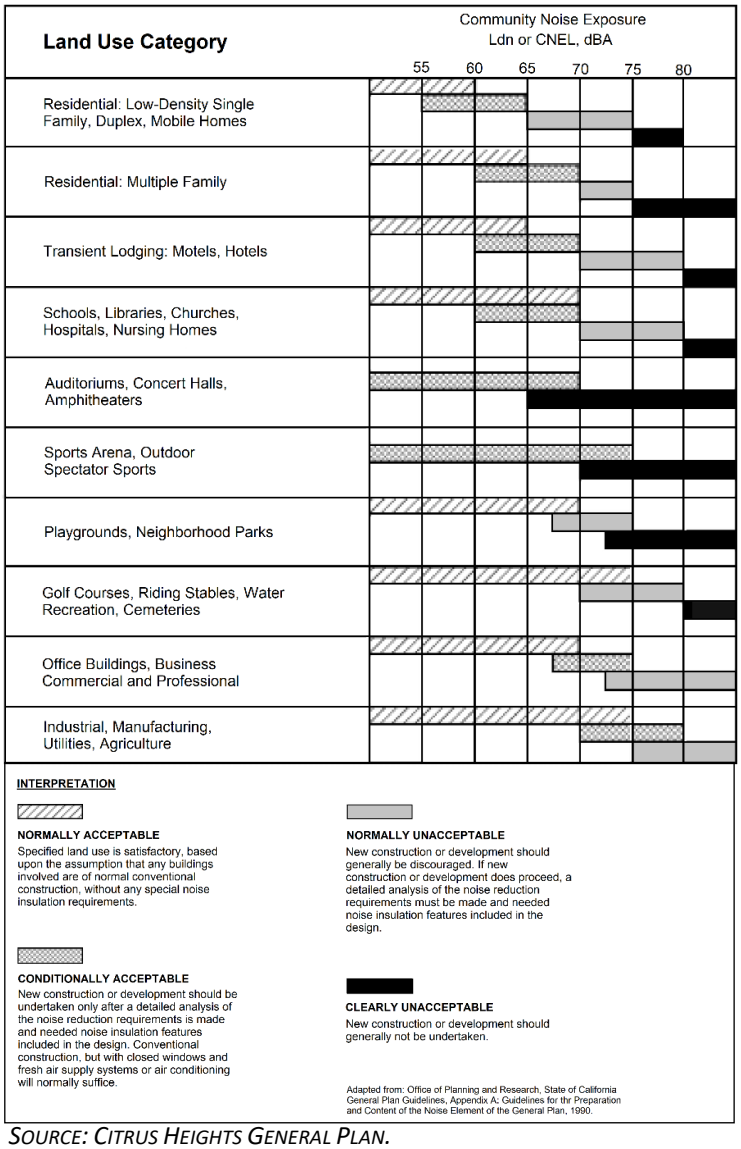
STATE

California Environmental Quality Act

The California Environmental Quality Act (CEQA) Guidelines, Appendix G, indicate that a significant noise impact may occur if a project exposes persons to noise or vibration levels in excess of local general plans or noise ordinance standards, or cause a substantial permanent or temporary increase in ambient noise levels. CEQA standards are discussed more below under the Thresholds of Significance section.

California State Building Code

The State Building Code, Title 24, Part 2 of the State of California Code of Regulations establishes uniform minimum noise insulation performance standards to protect persons within new buildings which house people, including hotels, motels, dormitories, apartment houses and dwellings other



than single-family dwellings. Title 24 mandates that interior noise levels attributable to exterior sources shall not exceed 45 dB L_{dn} or CNEL in any habitable room.

Title 24 also mandates that for structures containing noise-sensitive uses to be located where the L_{dn} or CNEL exceeds 60 dB, an acoustical analysis must be prepared to identify mechanisms for limiting exterior noise to the prescribed allowable interior levels. If the interior allowable noise levels are met by requiring that windows be kept closed, the design for the structure must also specify a ventilation or air conditioning system to provide a habitable interior environment.

Citrus Heights General Plan

New residential development projects shall be designed and constructed to meet acceptable exterior noise level standards shown in Table 3.9-4 [Table 9 of the General Plan], as follows:

TABLE 3.9-4: LAND USE COMPATIBILITY CHART

SOURCE: CITRUS HEIGHTS GENERAL PLAN.

- The maximum exterior noise level of 60 dBA L_{dn} shall be applied in residential areas where outdoor use is a major consideration (such as backyards in single family housing developments and recreation areas in multi-family housing projects). Where the City determines that providing a L_{dn} of 60 dBA or lower is not feasible, the noise level in outdoor areas shall be reduced to as close to the standard as feasible through project design.
- Indoor noise levels shall not exceed a L_{dn} of 45 dBA in new residential housing units.
- Noise levels in new residential development exposed to an exterior L_{dn} of 60 dBA or greater shall be limited to a maximum instantaneous noise level (e.g. trucks on busy streets, train warning whistles) in bedrooms of 50 dBA. Maximum instantaneous noise levels in all other habitable rooms shall not exceed 55 dBA.

When located adjacent to existing or planned sensitive residential and public / quasi-public users, require new nonresidential development to mitigate noise to a maximum of 60 dBA L_{dn} at the property line.

Additionally, the following goals and policies from the Citrus Heights General Plan will apply to the proposed Specific Plan:

COMMUNITY HEALTH ELEMENT

Goal 52: Protect City residents from the harmful and annoying effects of exposure to excessive noise through noise reduction and suppression techniques and appropriate land use policies.

Policy 52.1: Review proposed development projects for compliance with the standards in *Table 9: Acceptable Noise Levels*. If it appears that a project may exceed the limits of Table 9, require an acoustical analysis to identify potential noise levels and attenuation methods.

Policy 52.3: Protect the community, especially noise sensitive receptors, including schools, residences and care facilities, from excessive noise. Residential uses located in a commercial zone are not considered noise sensitive receptors.

Policy 52.4: Require major development proposals to reduce noise impacts on adjacent properties through appropriate techniques including, but not limited to, the following strategies:

- Permit well-designed sound walls when compatible with the surrounding area
- Screen and control noise sources such as parking, loading docks and mechanical equipment
- Increase setbacks for noise sources from adjacent dwellings
- Whenever possible, retain fences, walls or landscaping that serve as noise buffers (although design, safety and other impacts must also be addressed)
- Use soundproofing material and double-glazed windows
- Control hours of operation, including deliveries and trash pickup.

Policy 52.5: When located adjacent to existing or planned sensitive residential and public/quasi-public uses, require new nonresidential development to mitigate noise to a maximum of 60 dBA L_{dn} at the property line.

Policy 52.6: Use techniques such as roadway design, traffic signalization and other traffic management techniques (such as limiting heavy truck traffic in residential areas and requiring alternative paving material) to reduce noise caused by speed or acceleration of vehicles.

Policy 52.7: Protect receivers of roadway noise through appropriate attenuation techniques. The preference is for noise attenuation techniques that minimize the use of sound walls.

City of Citrus Heights Noise Ordinance

The City of Citrus Heights Code of Ordinances provides the follow criteria for noise generated by stationary sources:

Each of the noise limits specified in Table 3.9-6 shall be reduced by five dBA for impulsive or simple tone noises or for noises consisting of speech or music. If the ambient noise level exceeds that permitted by any of the first four noise limit categories in Table 3.9-6, the allowable noise limit shall be increases in five-dBA increments in each category to encompass the ambient noise level. If the ambient noise level exceeds the fifth noise level category, the maximum ambient noise level shall be the noise limit for that category.

3.9.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact related to noise if it will result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; and/or
- Generation of excessive groundborne vibration or groundborne noise levels.

Determination of a Significant Increase in Noise Levels

The CEQA Guidelines define a significant impact of a project if it "increases substantially the ambient noise levels for adjoining areas." Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dB change is barely perceptible,
- A 5-dB change is clearly perceptible, and
- A 10-dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-Project-noise conditions. Table 3.9-7 is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn}.

TABLE 3.9-7: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

AMBIENT NOISE LEVEL WITHOUT PROJECT, LDN	*INCREASE REQUIRED FOR SIGNIFICANT IMPACT*
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

SOURCE: FEDERAL INTERAGENCY COMMITTEE ON NOISE (FICON)

Based on the Table 3.9-7 data, an increase in the traffic noise level of 5 dB or more would be significant where the pre- project noise levels are less than 60 dB L_{dn}, or 3 dB or more where existing

noise levels are between 60 to 65 dB Ldn. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB L_{dn}. The rationale for the Table 3.9-7 criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

Vibration Standards

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

Human and structural response to different vibration levels is influenced by several factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 3.9-8 indicates that the threshold for damage to structures ranges from 0.2 to 0.6 peak particle velocity in inches per second (in/sec p.p.v). 0.2 in/sec p.p.v. is considered a safe criterion that would protect against architectural or structural damage. The general threshold at which human annoyance could occur is noted as 0.1 in/sec p.p.v.

TABLE 3.9-8: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

PEAK PARTICLE VELOCITY		*HUMAN REACTION*	*EFFECT ON BUILDINGS*
MM/SEC.	*IN./SEC.*		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage.

SOURCE: CALTRANS. TRANSPORTATION RELATED EARTHBORN VIBRATIONS. TAV-02-01-R9601 FEBRUARY 20, 2002.

IMPACTS AND MITIGATION MEASURES

Impact 3.9-1: Specific Plan implementation would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Plan Area in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies – Operational and Traffic Noise (Less than Significant with Mitigation)

Traffic circulation, parking areas, and amplified music or speech in Sunrise Commons Park are considered to be the primary noise sources for the proposed Specific Plan. Additionally, community plazas and gathering areas as well as drive-through restaurant speakers are substantial noise-generating components. This analysis considers each of these primary noise sources along with vehicle circulation in the Plan Area.

OPERATIONAL NOISE AT EXISTING SENSITIVE RECEPTORS

As noted previously, sensitive land uses include existing single-family residential uses to the south of the Plan Area and multi-family residential uses to the east of the Plan Area. Figure 3.9-2 shows the daytime operational noise contours for existing sensitive receptors in the area. As shown on Figure 3.9-2, Specific Plan buildout is predicted to expose nearby residences to daytime noise levels up to 51 dBA, L_{eq} during daytime (7:00 a.m. to 10:00 p.m.) hours and 39 dBA, L_{eq} during daytime (10:00 p.m. to 7:00 a.m.) hours. This would comply with the City of Citrus Heights Noise Ordinance daytime standard of 55 dBA, L_{eq} and nighttime standard of 50 dBA, L_{eq}. Therefore, no exterior noise control measures would be required, and impacts resulting from exterior noise levels due to operation of the proposed Specific Plan would be considered ***less than significant***.

EXTERIOR AND INTERIOR TRAFFIC NOISE AT EXISTING SENSITIVE RECEPTORS

Tables 3.9-9 and 3.9-10 show the project-related noise level increases in the existing plus project and cumulative plus project conditions.

TABLE 3.9-9: EXISTING TRAFFIC NOISE LEVEL AND PROJECT-RELATED TRAFFIC NOISE LEVEL INCREASES

Macy Plaza Dr	East of Sunrise Blvd	62.0	63.8	1.8

SOURCE: FHWA-RD-77-108 WITH INPUTS FROM FEHR & PEERS SAXELBY ACOUSTICS. 2021.

Based upon the Table 3.9-7 FICON criteria, where existing traffic noise levels are greater than 65 dB L_{dn}, at the outdoor activity areas of noise-sensitive uses, a +1.5 dB L_{dn} increase in roadway noise levels would be considered significant. Where existing noise levels are between 60 dB and 65 dBA L_{dn}, a +3.0 dB L_{dn} increase in roadway noise levels would be considered significant. As shown in Tables 3.9-9 and 3.9-10, the maximum increase in traffic noise at the nearest sensitive receptor is predicted to be 0.7 dBA where existing noise levels exceed 65 dBA L_{dn}, and 1.8 dB where existing noise levels are between 60 to 65 dBA L_{dn}. Therefore, no noise control measures would be required, and impacts resulting from increased traffic noise would be considered ***less than significant***.

EXTERIOR AND INTERIOR TRAFFIC NOISE AT NEW PROPOSED SENSITIVE RECEPTORS

New sensitive receptors could be subject to noise levels exceeding the City of Citrus Heights 45 dBA L_{dn} interior noise standard and 60 dBA L_{dn} exterior noise standards. Figure 3.9-3 shows the traffic-related noise contours for proposed sensitive receptors in the Plan Area. Based upon Figure 3.9-3, exterior noise exposure is predicted to fall within 63 to 74 dBA L_{dn} at the proposed residential and hotel uses located along Sunrise Boulevard and Greenback Lane. It is expected that noise control measures such as noise barriers or site design measures would be required to reduce exterior noise levels to 60 dBA L_{dn}, or less, at outdoor use areas of these noise-sensitive uses.

Typical modern building construction provides a 25 dB exterior-to-interior noise reduction. Therefore, sensitive uses exposed to exterior noise levels of less than 70 dBA L_{dn} would not typically need additional noise control measures to meet the City's 45 dBA L_{dn} interior noise level standard. Based upon Figure 3.9-3, the proposed hotel use at the corner of Sunrise Boulevard and Greenback Lane is the only proposed use that is predicted to experience exterior noise levels exceeding 70 dBA L_{dn}. Therefore, interior noise control measures, such as use of acoustic windows or building façade improvements, may be required. These measures would need to be designed in a subsequent, focused noise study for this property.

Mitigation Measures 3.9-1a and 3.9-1b require noise studies for the proposed mixed-use residential, senior housing, and hotel uses which demonstrate compliance with the City's exterior noise

standards at proposed outdoor areas. With mitigation, impacts resulting from traffic noise on proposed sensitive uses would be considered ***less than significant***.

EXTERIOR AND INTERIOR NON-TRANSPORTATION NOISE AT NEW SENSITIVE RECEPTORS

As noted previously, non-transportation noise associated with the community plazas and gathering areas would occur upon buildout of the Plan Area. New sensitive receptors could be subject to noise levels exceeding the City of Citrus Heights noise ordinance, which outlines 55 dBA L_{eq} daytime and 50 dBA L_{eq} nighttime exterior noise standards. Figure 3.9-4 shows the daytime non-transportation noise contours for proposed sensitive receptors in the Plan Area. Figure 3.9-5 shows the nighttime non-transportation noise contours for proposed sensitive receptors in the Plan Area.

Based upon Figures 3.9-4 and 3.9-5, exterior noise exposure at new sensitive receptors is generally expected to be less than 55 dBA L_{eq} and 50 dBA L_{eq} at future on-site receptors. However, mixed-use residential uses located around the proposed Sunrise Commons Park area could experience daytime noise levels up to 81 to 82 dBA L_{eq} during large music events. It is expected that these mixed-use residential uses would be located at second floor, or higher, elevations over retail uses. Therefore, there is no practical way to reduce exterior noise levels during these types of events as noise barriers would not shield these elevated uses.

The City's noise ordinance Section 34-88(2) provides an exemption for outdoor gatherings, public dances, shows, and sporting and entertainment events, provided the events are conducted pursuant to a license or permit issued by the City. Therefore, future uses should be required to obtain such a permit for use of amplified music events occurring in the proposed Sunrise Commons Park area. Mitigation Measures 3.9-1a and 3.9-1b require focused noise studies for the proposed mixed-use residential, senior housing, and hotel uses along Sunrise Boulevard and Greenback Lane (as shown in Figure 3.9-6). The future noise studies would be required to demonstrate compliance with the City's exterior noise standards at proposed outdoor areas, as well as interior noise standards for the proposed hotel use. Mitigation Measure 3.9-2 requires future events held in the Sunrise Commons Park area which use amplified sound exceeding 60 dBA L_{eq} at 50 feet to obtain a permit from the City pursuant to Section 34-88(2) of the City's Noise Ordinance. Mitigation Measure 3.9-3 requires that special event sponsors implement best management practices, and that upgraded windows be provided for mixed-use residential units over commercial-use areas. With mitigation, this impact would be considered ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.9-1a: *If any proposed uses located along Sunrise Boulevard or Greenback Lane would contain noise-sensitive receptors (including but not limited to hotel uses, mixed-use residential, senior housing or other residential), noise studies shall be prepared to demonstrate compliance with the City's exterior noise standards at proposed outdoor areas. The noise studies shall, as applicable, include recommendations for the appropriate methods for reducing noise levels at the sites to within the City's exterior noise standards. The effectiveness of the mitigation, if required, shall be documented by the noise studies. The noise studies shall be submitted prior to the approval of tentative maps or site plans for the mixed-use residential, senior housing, and hotel uses*

located along Sunrise Boulevard or Greenback Lane, and shall be subject to review and approval by the City of Citrus Heights.

Mitigation Measure 3.9-1b: *The proposed hotel use located at the corner of Sunrise Boulevard and Greenback Lane shall have a noise study prepared to demonstrate compliance with the City's interior noise standard. The noise study shall, as applicable, include recommendations for the appropriate methods for reducing noise levels at the site to within the City's interior noise standards. The effectiveness of the mitigation, if required, shall be documented by the noise study. The noise study shall be submitted prior to the approval of the site plan for the hotel use located along Sunrise Boulevard or Greenback Lane, and shall be subject to review and approval by the City of Citrus Heights.*

Mitigation Measure 3.9-2: *Events held in the proposed Sunrise Commons Park which require the use of amplified sound exceeding 60 dBA L_{eq} at 50 feet shall require a permit obtained from the City pursuant to Section 34-88(2) of the City's Noise Ordinance. Noise levels from such events shall not exceed 90 dBA at 50 feet from the sound system and shall be monitored to verify compliance.*

Mitigation Measure 3.9-3: *To address noise levels from special events and music, the following conditions shall apply to the project:*

- *Amplified sound shall not continue past 10:00 p.m.*
- *Buyers and renters shall be notified of potential noise due to special events, including the occasional use of amplified sound.*
- *Windows of residential units with a direct view of the Sunrise Commons Park, shall be acoustically upgraded with windows having a minimum sound transmission class (STC) rating of 35.*
- *Mixed-use residential units located over commercial-use areas, which may include the use of indoor or outdoor amplified sound, shall be acoustically upgraded with minimum STC 35 exterior windows and a floor-ceiling assembly having a minimum laboratory STC rating of 60 (55 if field-tested), as determined by a qualified acoustic engineer.*

Impact 3.9-2: Specific Plan implementation would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Plan Area in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies – Construction Noise (Less than Significant with Mitigation)

During the future construction phases for development projects in the Plan Area, noise from construction activities would add to the noise environment in the immediate project vicinity. As indicated in Table 3.9-11, construction activities would generate maximum noise levels ranging from 76 to 90 dBA L_{max} at a distance of 50 feet. Noise would also be generated during the construction phase by increased truck traffic associated with the transport of heavy materials and equipment to and from the construction site. Although construction noise, including noise from increased construction truck traffic, would be temporary in nature and these activities are anticipated to occur

during normal daytime working hours, there are several residential uses approximately 30 feet from the Plan Area which may be subject to construction noise. As a result, noise-generating construction activities would be considered to have a potentially significant short-term impact.

TABLE 3.9-11: CONSTRUCTION EQUIPMENT NOISE

SOURCE: ROADWAY CONSTRUCTION NOISE MODEL USER'S GUIDE. FEDERAL HIGHWAY ADMINISTRATION. FHWA-HEP-05-054. JANUARY 2006.

Construction activities associated with implementation of the Specific Plan would be required to comply with the City of Citrus Heights Noise Ordinance, which exempts construction activities from the noise standards, provided that they do not take place between the hours of 8:00 p.m. and 6:00 a.m. on weekdays and Friday commencing at 8:00 p.m. through and including 7:00 a.m. on Saturday, Saturdays commencing at 8:00 p.m. through and including 7:00 a.m. on the next following Sunday, and on each Sunday after 8:00 p.m. Additionally, Mitigation Measure 3.9-4 would require preparation of a construction noise management plan to ensure measures are implemented to minimize construction noise on surrounding sensitive land uses. With mitigation, this impact would be considered ***less-than-significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.9-4: *Prior to issuance of a grading, building, or demolition permit, the project applicant(s) shall prepare a construction noise management plan that identifies measures to be taken to minimize construction noise on surrounding sensitive land uses. The plan shall include specific noise management measures to be included within the project plans and specifications, subject to review and approval by the City Community Development Department. Noise management measures may include, but are not limited to, using temporary noise walls or curtains around specific areas, staging lay down areas away from sensitive uses, locating truck routes away from receptors, reducing hours of operation, limiting certain loud noise activities to certain hours, etc. The project applicant(s) shall demonstrate, to the satisfaction of the City, that the project complies with the following:*

- *Construction activities shall only take place between the hours limited 6:00 a.m. to 8:00 p.m. on weekdays, and 7:00 a.m. to 8:00 p.m. on Saturday and Sunday.*
- *Construction equipment shall be properly maintained and equipped with noise-reduction intake and exhaust mufflers and engine shrouds, in accordance with manufacturers' recommendations. Equipment engine shrouds shall be closed during equipment operation.*
- *When not in use, motorized construction equipment shall not be left idling for more than 5 minutes.*
- *Stationary equipment (power generators, compressors, etc.) shall be located at the furthest practical distance from nearby noise-sensitive land uses or sufficiently shielded to reduce noise-related impacts.*

Impact 3.9-3: Specific Plan implementation would not generate excessive groundborne vibration or groundborne noise levels (Less than Significant with Mitigation)

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural damage.

The Table 3.9-12 data indicate that construction vibration levels anticipated for the project are less than the 0.2 inches per second threshold at distances of 26 feet for the most typical construction equipment. Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are located approximately 26 feet, or further, from typical construction activities. At these distances, construction vibrations are not predicted to exceed acceptable levels. Additionally, construction activities would be temporary in nature and would occur during normal daytime working hours, as required by Mitigation Measure 3.9-1. However, pile driving could cause exceedance of the 0.2 in/sec criteria at distances of up to approximately 75 feet. It is not clear at this time whether pile driving would be a required construction technique for future development projects in the Plan Area.

While construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors, should pile driving be required within 75 feet of a residential structure, mitigation would be required to ensure that construction vibrations do not cause damage to any adjacent structures. With implementation of Mitigation Measure 3.9-5 below, the proposed project would have a ***less than significant*** impact relative to this environmental topic.

TABLE 3.9-12: VIBRATION LEVELS FOR VARYING CONSTRUCTION EQUIPMENT

TYPE OF EQUIPMENT	*P.P.V. @ 25 FEET (INCHES/SECOND)*	*P.P.V. @ 50 FEET (INCHES/SECOND)*	*P.P.V. @ 75 FEET (INCHES/SECOND)*	*P.P.V. @ 100 FEET (INCHES/SECOND)*

SOURCE: FEDERAL TRANSIT ADMINISTRATION, TRANSIT NOISE AND VIBRATION IMPACT ASSESSMENT GUIDELINES, MAY 2006

MITIGATION MEASURE(S)

Mitigation Measure 3.9-5: *If pile driving is required within 75 feet of a residential structure, pre-construction crack documentation and construction vibration monitoring shall be conducted to ensure that construction vibrations do not cause damage to any adjacent structures. The results of the documentation and monitoring shall be submitted to the City Community Development Department prior to the start of construction activities which would occur within 75 feet of a residential structure.*

De Novo Planning Group
A Land Use Planning, Design, and Environmental Firm

This page left intentionally blank.

The purpose of this EIR section is to analyze and disclose the anticipated growth in population that would result from Specific Plan implementation, and analyze the Specific Plan's consistency with relevant planning documents and policies related to population and housing.

Information in this section is based primarily on information provided by the Specific Plan applicant in the application package submitted to the City, site surveys conducted by De Novo Planning Group in 2020, ground and aerial photographs, and the following reference materials:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- Citrus Heights Municipal Code (City of Citrus Heights, last updated October 2020);
- *Metropolitan Transportation Plan/Sustainable Communities Strategy* (Sacramento Area Council of Governments [SACOG], Adopted November 19, 2019);
- *SACOG Housing Element Data Package 2021-2029* (SACOG, February 2020);
- U.S. Census data (U.S. Census, 2019);
- Local Area Unemployment Statistics (U.S. Bureau of Labor Statistics, September 2020); and
- California Department of Finance Population and Housing Estimates (E-5 Reports) (California Department of Finance, 2019).

No comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic.

As discussed in the Initial Study, the Plan Area is currently developed with the Sunrise Mall and does not contain housing. The Specific Plan would not displace housing or people. There is ***no impact***, and this topic will not be further addressed in the EIR.

3.10.1 ENVIRONMENTAL SETTING

DEMOGRAPHICS

POPULATION TRENDS

The City of Citrus Heights incorporated in January 1997. As shown in Table 3.10-1, U.S. Census data indicates that the City of Citrus Heights experienced a loss in population from 2000 to 2010, decreasing from 85,071 to 83,301 persons at an annual average decrease of 0.21 percent, resulting in an overall population decrease of 2.35 percent. However, between 2010 to 2019, the City experienced strong population growth, increasing from 83,301 to 88,095 persons at an annual average increase of 0.62 percent, resulting in an overall population growth of 5.76 percent.

TABLE 3.10-1: POPULATION GROWTH – CITRUS HEIGHTS

YEAR	POPULATION	ANNUAL AVERAGE CHANGE
2000	85,071	--%
2010	83,301	-0.21%
2019	88,095	0.62%

SOURCES: SACOG, FEBRUARY 2020; CALIFORNIA DEPARTMENT OF FINANCE, 2019.

HOUSING STOCK

Table 3.10-2 summarizes the growth of the City's housing stock from the years 2000 to 2019, based on information from the US Census and California Department of Finance. The number of housing units has slightly decreased from 35,721 in 2010 to 35,158 in 2019, an average annual decrease of 0.18 percent.

TABLE 3.10 -2: HOUSING UNIT GROWTH – CITRUS HEIGHTS

YEAR	HOUSING UNITS	ANNUAL AVERAGE CHANGE
2000	34,921	--
2010	35,721	0.23%
2019	35,158	-0.18%

SOURCES: US CENSUS, 2000; CALIFORNIA DEPARTMENT OF FINANCE, 2019; SACOG, FEBRUARY 2020.

PERSONS PER DWELLING UNIT

The City's General Plan estimated the average persons-per household as 2.55 at the time of its adoption (City of Citrus Heights 2013a). However, according to the California Department of Finance 2019 E-5 Reports, the average number of persons residing in a dwelling unit in Citrus Heights is 2.70 (California Department of Finance, 2019). Additionally, the 2014-2018 American Community Survey 5-Year Estimates data reports average household sizes of 2.56 persons per owner-occupied households and 2.14 persons per renter-occupied households.

GROWTH PROJECTIONS

As part of the Sacramento Region Blueprint process, the Sacramento Area Council of Governments (SACOG) produced regional growth projections through 2040. The City is projected to have approximately 37,090 housing units and 23,920 employees by 2040. The 2020 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) adopted by SACOG in November 2019 projects that Citrus Heights will have 25,820 jobs and 40,650 housing units at total buildout.

At the time the City of Citrus Heights General Plan was adopted in 2011, the City was approximately 98 percent built out and development of the remaining 2 percent of vacant land was anticipated to result in an increase of approximately 149 residential acres. The City's General Plan EIR estimates that the total housing units will increase by 3,577 units to approximately 39,278 at buildout (which is approximately 2035), resulting in a total population of 100,480. Additionally, the City's General Plan EIR estimates the total employment workforce will increase to 31,970 at buildout.

3.10.2 REGULATORY SETTING

REGIONAL

Sacramento Area Council of Governments

SACOG is an association of local governments from six counties and 22 cities within the Sacramento Region. The counties include El Dorado, Placer, Sacramento, Sutter, Yolo, and Yuba. SACOG is responsible for the preparation of, and updates to, the Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for the region.

METROPOLITAN TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY

The 2020 MTP/SCS is a long-range plan for transportation improvements in the region, as well as policies and strategies to reduce greenhouse gas emissions, and was adopted by SACOG in November 2019. The MTP/SCS addresses the needs of the current population of 2.37 million residents, by improving the conditions of existing roads and adding more sidewalks, bike lanes, and restoring, maintaining and expanding transit, making it possible for more people to have many choices for how they get around and live independently as they age. The 2020 MTP/SCS also plans for the future by including roads and transit projects where new houses and jobs are added to serve today's children as they grow up and for new residents anticipated to move here over the next few decades. The plan is based on projections for growth in population, housing, and jobs. SACOG determines the regional growth projections by evaluating baseline data (existing housing units and employees, jobs/housing ratio, and percent of regional growth share for housing units and employees), historic reference data (based upon five- and ten-year residential building permit averages and historic county-level employment statistics), capacity data (General Plan data for each jurisdiction), and current MTP data about assumptions used in the most recent MTP/SCS. SACOG staff then meets with each jurisdiction to discuss and incorporate more subjective considerations about planned growth for each area. Finally, SACOG makes a regional growth forecast for new homes and new jobs, based upon an economic analysis provided by a recognized expert in order to estimate regional growth potential based on market analysis and related economic data. This growth forecast is then incorporated into the MTP/SCS.

REGIONAL HOUSING NEEDS PLAN

California General Plan law requires each city and county to have land zoned to accommodate a fair share of the regional housing need. The share is known as the Regional Housing Needs Allocation (RHNA) and is based on a Regional Housing Needs Plan (RHNP) developed by councils of government. SACOG is the lead agency for developing the RHNP for a six-county area that includes Sacramento County and the City of Citrus Heights. The latest housing allocation for the City of Citrus Heights covers the nearly eight-year period from 2021 through 2029 and consists of 697 units (66 extremely low, 66 very low, 79 low, 144 moderate, and 342 above moderate income). The City is not required to make development occur; however, the City must facilitate housing production by ensuring that land is available and that unnecessary development constraints have

been removed. The City prepared and adopted an updated Housing Element in 2011 to address the previous 2013-2021 (Cycle 5) RHNA, and is currently in the process of updating the Housing Element to address the current 2021-2029 (Cycle 6) RHNA.

LOCAL

City of Citrus Heights General Plan

The Citrus Heights General Plan sets forth goals, policies, and implementation measures to guide land use and development within the City. The City of Citrus Heights General Plan notes that the City's mix of housing types is one of the key elements of its character, and the General Plan includes goals and policies that seek to encourage development of a range of housing types. It also identifies a goal of preserving and enhancing the range and affordability of housing (City of Citrus Heights 2013a).

Goals and policies of the General Plan applicable to the analysis of the proposed Specific Plan's impacts on population and housing are listed below:

COMMUNITY DEVELOPMENT ELEMENT

Goal 25: Provide adequate sites for a variety of housing opportunities to serve all residents.

> **Policy 25.1:** Promote development of a variety of housing types in terms of location, cost, design, style, type, and tenure, while ensuring compatibility with adjacent uses of land.
>
> **Policy 25.3:** Facilitate mixed-use development and redevelopment in appropriate areas.
>
> **Policy 25.4:** Support a variety of housing opportunities on vacant or underutilized lands.

Goal 26: Develop, conserve, and improve the housing stock to ensure decent accommodations for all segments of the community.

> **Policy 26.2:** Promote construction of housing types with a variety of prices, styles, and designs.
>
> **Policy 26.3:** Promote improvements and rehabilitation to enhance the quality of multi-family developments.
>
> **Policy 26.4:** Promote high-quality multi-family developments that include appropriate design, scale, and amenities.

Goal 28: Ensure housing opportunities for all segments of the community.

> **Policy 28.1:** Pursue necessary resources for the development, maintenance and preservation of emergency housing, transitional housing, and housing to accommodate other special needs.

Policy 28.5: Encourage development of a variety of sizes, design, and styles of housing so that residents will be encouraged to stay in Citrus Heights as their housing needs change.

Policy 28.8: Create housing to help meet the needs of the community.

3.10.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on population and housing if it will:

- Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

IMPACTS AND MITIGATION MEASURES

Impact 3.10-1: Specific Plan implementation would not induce substantial unplanned population growth in an area (Less than Significant)

BACKGROUND

Section 15126.2(d) of the CEQA Guidelines requires that an EIR evaluate the growth-inducing impacts of a proposed action. A growth-inducing impact is defined by the CEQA Guidelines as:

> *The way in which a proposed Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth…It is not assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment.*

Based on the CEQA Guidelines, growth inducement refers to any growth that exceeds planned growth of an area and results in new development that would not have taken place without implementation of the project. A project can have direct and/or indirect growth inducement potential. Direct growth inducement would result if a project, for example, involved construction of new housing. A project would have indirect growth inducement potential if it established substantial new permanent employment opportunities (e.g., commercial, industrial, or governmental enterprises) or if it would involve a construction effort with substantial short-term employment opportunities that would indirectly stimulate the need for additional housing and services to support the new employment demand (*Napa Citizens for Honest Government v. Napa County Board of Supervisors* (2001) 91 Cal.App.4th 342). Similarly, a project would indirectly induce growth if it would remove an obstacle to additional growth and development, such as removing a constraint on a required public service. A project providing an increased water supply or wastewater treatment/collection in an area where this service historically limited growth could be considered growth-inducing.

The CEQA Guidelines further explain that the environmental effects of induced growth are considered indirect impacts of the proposed action. These indirect impacts or secondary effects of growth may result in significant, adverse environmental impacts. Potential secondary effects of growth include increased demand on other community and public services and infrastructure, increased traffic and noise, and adverse environmental impacts such as degradation of air and water quality, degradation or loss of plant and animal habitat, and conversion of agricultural and open space land to developed uses.

Growth inducement may constitute an adverse impact if the growth is not consistent with or accommodated by the land use plans, growth management plans and policies for the area affected. Local land use plans provide for land use development patterns and growth policies that allow for the orderly expansion of urban development supported by adequate urban public services, such as water supply, roadway infrastructure, sewer service, and solid waste service.

Components of Growth: The timing, magnitude, and location of land development and population growth in a region are based on various interrelated land use and economic variables. Key variables include regional economic trends, market demand for residential and non-residential uses, land availability and cost, the availability and quality of transportation facilities and public services, proximity to employment centers, the supply and cost of housing, and regulatory policies or conditions. Since the general plan of a community defines the location, type, and intensity of growth, it is the primary means of regulating development and growth in California.

GROWTH EFFECTS OF THE PROPOSED PROJECT

Direct Population Growth: The Sunrise Tomorrow Specific Plan proposes the future redevelopment of the approximately 95.8-acre Plan Area to transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play. Because the Specific Plan could include up to 2,220 total residential housing units, implementation of the Specific Plan would result in direct population growth. The addition of up to 2,220 housing units at full buildout has the potential to increase the population of the city by an estimated 5,661 persons (based on a persons per dwelling unit factor of 2.55, in accordance with the Citrus Heights General Plan).

The Citrus Heights General Plan (2011) and General Plan Program EIR analyzed impacts to population and housing and found that future development resulting from implementation of the General Plan would result in a less than significant impact related to substantial population and housing unit growth over existing conditions. At the time the City of Citrus Heights General Plan was adopted in 2011, the City was approximately 98 percent built out with only 2 percent of vacant land remaining, including 149-acres for residential land uses and 46 for commercial land uses. The Citrus Heights General Plan EIR estimated that development of the 149-acres designated for residential uses would result in 3,577 additional housing units for a total of 39,278 units by 2035. The Citrus Heights General Plan EIR also noted that future land uses would result in a population increase of approximately 15,880 persons by 2035 for a total population of 100,480. However, the 2011 General Plan and General Plan EIR did not account for the redevelopment of

the Plan Area into a mixed use development resulting in the production of housing units; therefore, the total buildout estimates in the General Plan and General Plan EIR did not account for additional growth within the Plan Area. It is noted, however, that the City is not currently meeting the buildout projections assumed in the General Plan EIR.

While the total buildout estimates in the General Plan and General Plan EIR did not account for additional growth within the Plan Area, the proposed Specific Plan is consistent with the regional growth projections. SACOG has identified the Sunrise Mall as one of 12 commercial corridors in the Sacramento region struggling with vacant or underutilized lots and lacking the density or mix of residential and commercial uses that support a sense of place that can attract more people, offering an opportunity for revitalization. Additionally, SACOG designates the proposed Specific Plan area as a green zone, which is defined as a center, corridor, or established community with infill capacity to promote strategies to increase transportation options for shorter, cleaner, and fewer vehicle trips and increase housing options near transit centers. The Sacramento Region Blueprint 2050 Preferred Scenario Map prepared by SACOG identifies the Plan Area for Mixed-Use Employment Focus land uses. As described in Chapter 3.8, Land Use, the Plan Area is designated as a Center and Corridor Community by the 2020 MTP/SCS and MTP/SCS EIR. The future growth of the Plan Area is consistent with the regional growth estimates for Citrus Heights analyzed and anticipated in the 2020 MTP/SCS and MTP/SCS EIR. The Sacramento Region Blueprint 2050 Preferred Scenario Map prepared by SACOG identifies the Plan Area for Mixed Use Employment Focus developments. According to Appendix C (i.e., Review of the 2035 and 2040 Draft Preferred Scenario) of the 2020 MTP/SCS, the City of Citrus Heights is anticipated to have a total of 40,650 housing units at total buildout. Of the 40,650 units, SACOG notes that 2,350 housing units are anticipated from Center and Corridor Communities, including 1,050 units from Sunrise Boulevard developments and 1,300 housing units from Riverside-Auburn (i.e., Boulevard Plan) developments. As previously stated, the proposed Specific Plan would facilitate the production of 2,220 housing units at full buildout with the potential to increase the population of the city by an estimated 5,661 persons. While the proposed Specific Plan would result in more residential units than the 2020 MTP/SCS anticipated for Sunrise Boulevard area, the development is within the regional growth projections for Corridor Communities.

The 2020 MTP/SCS provides a coordinated strategy for managing land use patterns and transportation improvements to accommodate projected population growth. The 2020 MTP/SCS is intended to help shape growth patterns in the region, leading to better efficiency, higher sustainability, and more compact and mixed patterns of land use that are better served by transit and other mode choice options. While the proposed Specific Plan would facilitate the direct growth of future housing units, the Specific Plan is consistent with the 2020 MTP/SCS and facilitates the future development of mixed-use residential and commercial neighborhood areas, walkable street grids, and a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential. The Specific Plan also provides for a high level of bicycle and pedestrian connectivity throughout the Plan Area, including non-auto

connections to the parks, open space, and trails features, as well as plans for a future transit station along Sunrise Boulevard. Therefore, the proposed Specific Plan has the potential to shorten commute times, reduce traffic congestion, lower dependency on automobiles, improve air quality, reduce GHG emissions, and provide housing choices more aligned with the changing demographic of the Sacramento region, consistent with the 2020 MTP/SCS. Lastly, it is important to note that complete buildout of the Sunrise Tomorrow Specific Plan is anticipated to be phased over 20 years, meaning the development would not occur all at once. The Specific Plan has been developed to adequately plan for the provisions of necessary systems and services to accommodate the buildout of the Plan Area and support the associated growth.

Additionally, according to the Sunrise Market Impact Analysis prepared by MXD Development Strategists (see Appendix E), the Greater Sacramento multi-family residential market has seen strong demand in recent years that is driven primarily by healthy employment growth and in-migration from Southern California and the Bay Area. The Carmichael/Citrus Heights submarket is considered one of Greater Sacramento's largest and most affordable multi-family submarkets with asking rents 14 percent below the average. This is primarily due to limited new construction and inventory that skews towards aging and/or low-end product. Housing supply in Greater Sacramento has not kept pace with demand, resulting in rents continuing to increase while vacancy decreases. New high-quality housing built on the Sunrise Mall property would provide the City of Citrus Heights with a residential property type that is currently not available in the submarket but is much needed. There has been limited interest from the private development community to build new product in this submarket, primarily due to lack of developable land, high construction costs and higher returns for refurbishment projects over new development in recent years. The mixed-use, amenity rich, and walkable nature of the development would also lend itself to creating an environment that would entice a younger professional demographic of considering Citrus Heights as a home. Multi-family impact in the submarket is considered insignificant and may in fact spur additional residential development nearby as has been the case in comparable redevelopments nationwide, which would further help with the lack of new multi-family developments in the Citrus Heights/Carmichael subarea.

Overall, the proposed Specific Plan would not result in direct unplanned growth in an area and would instead result in growth consistent with regional projections for the Greater Sacramento area.

Indirect Population Growth: As described above, projects that include employment generating uses have the potential to result in indirect population growth through the creation of jobs or the extension of infrastructure into areas that were not previously served. The Citrus Height General Plan designates land uses to ensure a balance between new residential development and jobs-creating uses. The Citrus Heights General Plan EIR identified that buildout of the General Plan would result in the addition of up to 2.95 million non-residential SF of commercial and industrial development.

The Sunrise Tomorrow Specific Plan proposes the future redevelopment of the approximately 95.8-acre Plan Area. The proposed Specific Plan would result in the demolition of the approximately 1.125 million square foot Sunrise Mall[1] to transform the area into a premier regional destination and a flourishing center of community life. The proposed Specific Plan would result in both a loss of jobs due to demolition of the existing mall and provide additional job growth to the area due to the future development of up to 480 hotel rooms, up to 320,000 SF of retail uses, up to 960,000 SF of office uses, and up to 450,000 SF of community/institutional land uses. This results in a total of 480 hotel rooms and 1,730,000 SF of non-residential development.

When compared to the existing Sunrise Mall, the proposed Specific Plan results in approximately 480 more hotel rooms and 530,000 more SF of non-residential development. However, it is important to note that the existing Sunrise Mall consists of all commercial and retail uses while the proposed Specific Plan provides for retail, commercial, hotel, office/business park, and community/institutional uses allowing for a larger diversification of the employment base. The proposed Specific Plan would provide for approximately 805,000 less SF of retail/commercial uses than the existing Sunrise Mall to allow for the additional development of 480 hotel rooms, 960,000 SF of office uses, and 450,000 SF of community/institutional land uses.

It is anticipated that local employment opportunities would be increased to provide professional, arts, entertainment, food service, information, administrative, management, and retail services. The proposed Specific Plan is expected to require both full-time and part-time employees. Many of the newly created jobs are expected to be in the retail/commercial, which would be opportunities well-suited for second wage earners in households, the younger workforce, and others, which generally depend on the local workforce. Additionally, the Specific Plan would result in the creation of many office/business and community/institutional sector jobs in place of previous retail/commercial jobs, which would provide opportunities for higher paying jobs to support one-wage earners in households, the established workforce, and others. It is anticipated that the employment growth would be met both by existing residents and through the attraction of new residents. Data from U.S. Bureau of Labor Statistics (2020) indicates that the Sacramento – Roseville – Arden-Arcade (SRA) Metropolitan region, which includes Citrus Heights, had an unemployment rate of approximately 9.0%, as of August 2020, which was 5.3% higher than the unemployment rate in August 2019. Additionally, the August 2020 unemployment rate for the SRA Metropolitan region was slightly higher than the national average of 8.5%, but lower than the California State average of 11.6% (U.S. Bureau of Labor Statistics, November2020). It is important to note that high unemployment rates in 2020 are in part due to the global health pandemic, which resulted in a shutdown of many sectors of the economy causing significant increases to the unemployment rate. For example, the unemployment rate of the SRA Metropolitan region was 3.9% in January of 2020 before sharply rising to 14.0% in April of 2020. Due to the fact there is currently a surplus of unemployed workforce within the City and metropolitan area, it is likely that current residents and residents within the surrounding communities could fill the majority of new

[1] *Sunrise Mall Market Impact Analysis.* October 2020. MXD Development Strategists.

positions. Additionally, buildout of the Specific Plan is anticipated to be developed over 20 years, meaning employment opportunities associated with retail, commercial, hotel, office/business park, and community/institutional uses would become available overtime. The population growth induced by the creation of new businesses could be supported by the available housing within Citrus Heights as well as new housing planned as part of the Sunrise Tomorrow Specific Plan.

The construction of new developments within the Specific Plan Area would increase temporary construction jobs in the area. As buildout of the project is expected to occur gradually in response to market demand, construction related employment would be similarly dispersed over time. Local construction companies are likely to find ample pools of employable personnel in the Citrus Heights area, based on the current and projected employment trends. Due to the fact there is currently a surplus of unemployed workforce within the City, it is likely that area residents would fill the majority of these temporary construction positions.

CONCLUSION

The General Plan identifies the Plan Area as part of the Sunrise Marketplace and notes a number of goals and policies promoting the future redevelopment of the Sunrise Marketplace, including a policy promoting transit-oriented development through the reuse and redevelopment of opportunity sites near the Greenback Lane/Sunrise Boulevard intersection for mixed-use projects with a residential component (Policy 13.5). Additionally, the City Council adopted an Amendment to the General Plan in 2018 requiring the development of a Specific Plan for the Sunrise Mall property to guarantee a comprehensive plan for future redevelopment of the mall as a means to ensure the continued success of the City's core. The language in the General Plan Amendment specifies that the goal is to transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with General Plan Goal 12 and Policy 12.3. So, while the total buildout estimates in the Citrus Heights General Plan and General Plan EIR did not anticipate the specific development potential identified in the Sunrise Tomorrow Specific Plan, the General Plan does promote the proposed redevelopment of the Plan Area and, as previously discussed, the proposed Specific Plan is consistent with the regional growth projections identified by SACOG. Therefore, the proposed Specific Plan is not anticipated to result in direct unplanned growth in an area and would instead result in growth consistent with regional projections for the Greater Sacramento area.

Additionally, the proposed Sunrise Tomorrow Specific Plan is the result of a collaborative planning effort to develop a shared vision for the future of the heart of Citrus Heights. The project team studied the existing planning context, documented existing site conditions, and analyzed the current market conditions in Citrus Heights and the greater Sacramento region. The project team used community feedback to develop a vision statement, identifying the shared goals and aspirations for the project. Several plan options were developed, representing different ways of organizing development on the site in accordance with the vision. Metrics were provided for each of the options, including an economic impact analysis, which allowed for the city to evaluate the alternatives and identify a preferred option that best represents the shared goals and aspirations

of stakeholders in a financially-viable and implementable way. The preferred option was then refined into a Specific Plan Concept, which is the proposed land use map analyzed in this EIR. Therefore, while the proposed Specific Plan would result in growth within the City, it is not anticipated to significantly induce growth that would not be planned and accommodated for by implementation of the Specific Plan. The preparation of the Sunrise Tomorrow Specific Plan was in response to General Plan policies and a General Plan amendment requiring the development of a Specific Plan for the Sunrise Mall property. The Specific Plan identifies the necessary infrastructure and utility systems to serve the associated growth and this EIR analyzes the potential environmental impacts of the proposed growth. Further, the growth associated with the Specific Plan is anticipated to gradually occur over 20 years. Additionally, the redevelopment of the Sunrise Mall has been accounted for and encouraged by SACOG for a mixed use, high density development with multi-modal transportation improvements. Thus, implementation of the proposed project would have a ***less than significant*** impact relative to this topic.

This page left intentionally blank.

This section describes and evaluates potential impacts associated with the provision of police protection, fire protection and emergency services, schools, parks and recreation, and other services for the proposed Specific Plan. This section is based in part on the following documents:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Final Environmental Impact Report, City of Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* (City of Citrus Heights, 2011);
- City of Citrus Heights Zoning Ordinance;
- School Accountability Report Card (San Juan Unified School District, 2018-2019);
- *Sunrise Recreation & Park District Master Plan 2014-2024* (Sunrise Recreation & Park District, 2015).

No comments were received during the public review period or scoping meeting for the Notice of Preparation regarding this topic.

3.11.1 ENVIRONMENTAL SETTING

POLICE PROTECTION

The Citrus Heights Police Department (CHPD) was established in June 2006. The CHPD includes a full service police station located at the Fountain Square Civic Center campus. The CHPD employs 92 sworn full-time police officers and organizes its peace officers into three divisions; the Operations Division (65), the Special Services Division (24), and the Office of the Chief (3). In addition, CHPD employs 56.5 full-time professional staff who are assigned throughout the three Divisions. The CHPD provides patrol services, investigative services, and support services.

The CHPD also draws on the resources of the larger Sacramento County Sheriff's Department. Should the CHPD need additional officers or equipment (e.g., helicopters), the Sheriff's Department responds and is reimbursed accordingly.

Patrol Services

The Patrol Services Division is led by one commander. The commander is supported by four lieutenants and nine sergeants. The Patrol Services Division is responsible for community-oriented policing that promotes neighborhood-based problem solving, at-risk youth intervention, and partnerships with businesses, community programs, and customer service. In addition, the Patrol Services Division is responsible for traffic enforcement, accident investigation, criminal investigation, service calls, the K-9 Unit and Bicycle Patrol.

Investigative Services

The Investigative Services Division is led by one commander who is supported by a division lieutenant and three sergeants. The responsibility of the Investigative Services Division is to conduct follow-up investigations of all reported felony offenses and certain misdemeanor offenses that occur in the City. The Division's detectives investigate crimes that have possible suspects or

leads. The objectives of such investigations are the identification and prosecution of those individuals responsible for the crime. In addition, Investigative Services is responsible for the Administrative Training Unit, Court Ordered Registrants, Crime Scene Investigations (CSI) and Property Unit, General Investigations, Special Investigations and Special Weapons and Tactics (SWAT).

Support Services

Support Services, consisting of the Communications Center and the Records Unit and the Volunteer-Intern Program, is led by one manager. The Communication Center is equipped with state-of-the-art communication equipment that operates on the county-wide communications system designed and maintained by the Sacramento Regional Radio Communications System, which enables staff to easily communicate with surrounding agencies. On a normal 24-hour day, the center will handle approximately 400 calls. Typically, calls coming into the center include requests for information, medical emergencies, reports of illegal or suspicious activity, requests for an officer to respond, and neighborhood quality of life concerns. The Communication Center is staffed with eleven dispatchers and two call-takers who monitor five computer screens, answer incoming 911, emergency, and non-emergency calls, provide information and advice to residents, and enter calls for service.

Response Times

One indicator of police performance commonly used by communities is the average time it takes a department to respond to calls for service. The CHPD has opted to use a "differential" response system. Each call for service is prioritized according to the amount of damage that can occur. For example, calls involving weapons and bodily harm are responded to immediately, while calls involving barking dogs and other such nuisances are delayed until all emergency calls have been handled. The CHPD also emphasizes the importance of effectively solving the problem once the officer has responded.

The CHPD classifies in progress (emergency) incidents and other significant, non-emergency incidents as Priority 1 calls. The department has an average response time of 11 minutes and 16 seconds to these Priority 1 calls. However, in the event an emergency response (lights and sirens) is necessary (in progress), the CHPD responds within 10 minutes 95 percent of the time, and within 15 minutes 98 percent of the time.[1] Industry standards indicate average response to calls for service between five and ten minutes from the time an officer is dispatched.

[1] Personal communication with Chad Morris, Lieutenant – Special Operations, Citrus Heights Police Department, October 22, 2020.

FIRE PROTECTION AND EMERGENCY SERVICES

The Sacramento Metropolitan Fire District (SMFD) currently provides fire protection services to unincorporated areas of Sacramento County and to the Cities of Rancho Cordova and Citrus Heights. SMFD offers fire protection, fire suppression, inspection, plan checking, emergency transportation and medical services, public education, advanced life support, and rescue services to the unincorporated portions of Sacramento County. SMFD was formed in 2000 by consolidation of the American River Fire District and the Sacramento County Fire Protection District.

As the largest fire district in Sacramento County, SMFD currently operates 42 stations and provides service through 664 uniformed and support personnel to nearly 745,000 people in a 359-square mile area. SMFD operates ten transporting Advanced Life Support medics, seven reserve transporting medics, 38 engine companies, five truck companies, 24 grass engines, two crash rescue rigs, six water tenders, four swift water rescue boats, five swift water rescue inflatable rubber boats, five air units, three reserve firefighter engine companies, and two reserve firefighter grass engines. Many of SMFD's engines are paramedic staffed and all responding units provide coverage by emergency medical technicians. SMFD's personnel are trained and equipped to deal not only with emergency medical alarms and structural or wildland fires, but also with swift water emergencies, confined space incidents, technical rescues, hazardous materials incidents, and crash fire rescue.

To improve response times for fire districts within Sacramento County, the County Department of Emergency Medical Services developed a Joint Powers Authority (JPA) for a unified-dispatch system to respond to fire and emergency-related incidents. Under the JPA, the closest unit available is dispatched to an incident, and fire district boundaries are not considered when an incident occurs. The JPA, known as the Regional Fire and Rescue Training Authority, is made up of the California Office of Emergency Services–Fire and Rescue Branch, SMFD, and the Sacramento Fire Department.

The City of Citrus Heights, at approximately 14 square miles, constitutes nearly 3 percent of the District's land area. The estimated 2020 service population for the SMFD is approximately 697,686 people.[2] The City's population which is estimated at 87,796, constitutes approximately 12.6 percent of SMFD's service population. The density of urban development in Citrus Heights, as opposed to more rural County areas, results in a larger percent of population residing in a smaller proportion of the SMFD service area.

Four of SMFD's fire stations are located within the City's General Plan planning area – Stations 21, 23, 27, and 28. In addition, Station 25 lies on the western boundary of the City, and also provides fire, rescue, and medical aid to Citrus Heights residents. The District's policy to maintain seamless coverage occasionally results in emergency crew response to the City from other available stations

[2] Personal communication with Jeff Frye, Sacramento Metro Fire District, October 21, 2020.

within the County. Conversely, crews stationed within Citrus Heights may also be dispatched to respond to emergencies in outlying communities.

Fire stations located within the City's General Plan planning area maintain high levels of emergency service. All of the engine teams stationed within the City are equipped with advanced life support (ALS) capabilities, and staffed by a firefighter-paramedic. As of October 2020, the Citrus Heights fire protection staff levels were as follows:

TABLE 3.11-1: CITRUS HEIGHTS FIRE PROTECTION STAFFING LEVELS (2020)

STATION	*ADDRESS*	*ENGINE TEAMS*	*TRUCK TEAMS*	*MEDIC TEAMS*	*OTHER*
21	7641 Greenback Lane	Engine 21 – ALS 1 Captain 1 Engineer 1 Firefighter-Paramedic	Truck 21 1 Captain 1 Engineer 2 Firefighters	Medic 21 – ALS 1 Firefighter-Paramedic 1 Firefighter	1 Battalion Chief

SOURCE: PERSONAL COMMUNICATION WITH JEFF FRYE, SACRAMENTO METRO FIRE DISTRICT, OCTOBER 21, 2020.

The Insurance Services Office (ISO) rating is the recognized classification for a fire department or district's ability to defend against major fires. According to the ISO, newly developing urban areas should have a fire station opened within 1.5 miles of all commercial development and 2.5 miles from all residential development when "build-out" exceeds 20% of the planning area. A rating of 10 generally indicates no protection, whereas an ISO rating of 1 indicates high firefighting capability. The SMFD's ISO rating for Citrus Heights is currently a class 2.

Funding for fire services and facilities resulting from new construction is facilitated through SMFD's Capital Fire Facilities Fee Schedule and property tax revenue. The SMFD continuously monitors trends that impact property values in order to develop realistic projections of property tax revenues upon which budgeting and service level decisions can be made. To the extent that property tax revenues expected to be generated by new development would not be sufficient to fund the expected operating cost to provide service, SMFD will explore alternative funding mechanisms to ensure that adequate service is provided and to avoid any degradation of service to existing communities.

The Capital Fire Facilities Fee was established through State Assembly Bill 1600, which provides the authority for SMFD to fund the full cost of providing new fire services and facilities to new

development within its service area. The fee is used exclusively to defray costs and mitigate the impact associated with property acquisition, site preparations, design, construction, and equipping new fire stations that are required to serve new development. The Capital Fire Facilities Fee became effective in June 2003 and remains in effect until December 31, 2035. Additional funds are generated by ambulance transport fees, and service fees (mostly from fire prevention plan checking charges). The Capital Fire Facilities Fee is assessed by the City's Public Works Department when improvement plans are submitted.

SCHOOLS

The Plan Area is located within the San Juan Unified School District (SJUSD) boundary. The SJUSD currently maintains 43 elementary school sites, nine middle school sites, and nine high school sites. Additionally, the district maintains four special high schools, three special education centers, and three adult education facilities.

Within Citrus Heights, there are nine elementary school sites, one middle school, and two traditional high schools. In addition to the traditional high schools, SJUSD also operates El Sereno Independent Study High School located on the campus of San Juan High School. SJUSD also maintains the Sunrise Tech Center adult education facility in Citrus Heights, located at the former campus of Sunrise Elementary School that was closed in 2004.

The SJUSD schools within the City of Citrus Heights had a 2018–2019 school year enrollment of 6,449 students. Table 3.11-2 identifies the 2018–2019 school-year enrollments for these schools. In the recent past, student enrollment figures at SJUSD schools have declined. According to the City's General Plan EIR, the SJUSD's projected decline in enrollment figures through 2016 has left SJUSD with extra facility capacity and no new facilities are planned at this time.

The SJUSD maintains an Open Enrollment policy to offer choice and to help equalize site capacities and enrollment figures throughout the District. If a school in a particular neighborhood is at or over capacity, the SJUSD may provide bussing to accommodate students at nearby schools not experiencing capacity restrictions.

As shown on the SJUSD School Site Locator, students living in the Plan Area would attend Northridge Elementary School, Andrew Carnegie Middle School, and Bella Vista High School. The enrollments for these three schools are shown in Table 3.11-3.

TABLE 3.11-3: PLAN AREA SCHOOL INVENTORY AND 2018/2019 ENROLLMENT

SCHOOL	*ENROLLMENT*
Northridge Elementary	370
Andrew Carnegie Middle	934
Bella Vista High	2,025

SOURCE: SAN JUAN UNIFIED SCHOOL DISTRICT, SCHOOL ACCOUNTABILITY REPORT CARDS FROM 2018-2019 SCHOOL YEAR.

Northridge Elementary is located at 5150 Cocoa Palm Way (Fair Oaks), approximately 0.85 miles southeast of the Plan Area, and serves elementary school students in grades K–6. Andrew Carnegie Middle School is located at 5820 Illinois Avenue (Orangevale), approximately 1.71 miles east of the Plan Area, and serves students in grades 6–8. Bella Vista High School is located at 8301 Madison Avenue (Fair Oaks), approximately 0.82 miles southeast of the Plan Area, and serves students in grades 9–12.

The SJUSD receives local funding through school impact fees and General Obligation bonds. Developer impact fees are the major source of funding for the SJUSD. As of October 2020, developer fees for residential construction are $4.08 per square foot and $0.66 per square foot for commercial or industrial construction. Developer fees may be used to finance new schools and equipment, and to reconstruct existing facilities to maintain adequate housing for all the district's students.

PARKS AND RECREATION SYSTEM

Sunrise Recreation and Park District (SRPD) is responsible for providing recreation and park resources to the residents of Citrus Heights, Antelope and Foothill Farms. The SRPD provides a wide variety of park facilities and recreation programs that complement other community resources and programs to provide a diverse and accessible selection of recreational opportunities for District residents.

SRPD maintains approximately 508 acres of parkland and recreation areas and serves approximately 163,000 residents across Citrus Heights, Antelope, and Foothill Farms. The SRPD currently administers 40 parks and open space (undeveloped) sites in the City's Planning Area, including one nine-hole golf course and a historic home, totaling approximately 406 acres. SRPD parks range in size from 0.22 acre to 48.6 acres. Approximately 289 acres of SRPD parkland exist within the City limits, 207 acres of which are developed. A majority of the developed parks in Citrus Heights are in the 8 to 16-acre range, and are located within or adjacent to residential

neighborhoods. With approximately 88 acres of neighborhood parks in this range, the City offers one acre of neighborhood park space per 1,000 residents. Two additional neighborhood parks, at approximately 3.5-acres each, do not fulfill SRPD's neighborhood park standards. The City's three community parks, C-Bar-C, Crosswoods and Rusch, total approximately 101-acres. These park facilities fulfill SRPD planning standards by providing Citrus Heights residents with 1.2 acres of community park space per 1,000 population.

Table 3.11-4 includes the names, locations, sizes, and amenities of existing SRPD facilities in the City.

TABLE 3.11-4: CITRUS HEIGHTS PARK SITES AND FACILITIES - SRPD

	TOTAL	**288.56 acres**	

SOURCE: CITRUS HEIGHTS GENERAL PLAN EIR, TABLES 4.9-9 AND 4.9-10.

State law mandates park improvement and acquisition dedications from new developers based on standards of three to five acres per 1,000 residents. The City's 2019 population was estimated to be 88,095, and the City currently contains 288.56 acres of parkland. This existing population and

park acreage results in an existing park service level of 3.28 acres per 1,000 residents. However, if the SRPD were to make park facility improvements on the 61 acres of undeveloped parkland in the City, Citrus Height's existing park standard would rise to approximately 3.97 acres per 1,000 residents.

The existing park facilities in the City nearest the Plan Area are located to the north, northeast, northwest, and southwest of the Plan Area: Mitchell Village Park, Tempo Community Park, Arcade Creek Park Site, and San Juan Park.

LIBRARY SERVICES

One library, the Sylvan Oaks Library, is located in the City of Citrus Heights. Since November 2002, the City of Citrus Heights and Sacramento Public Library have been partnering to enhance service levels at Sylvan Oaks Library. All shelves are filled to capacity to accommodate the approximately 80,000-item collection. Slavic, Chinese, Spanish, and Russian language materials are in demand. Adult seating is primarily at large tables, except for a few lounge seats. The teen area is a nook with beanbag chairs and neon signage. The community room is large enough to accommodate library and community programs. Groups of 10 or more are allowed to use the room for meetings as well as in literacy tutoring meetings.

Additionally, the Fair Oaks Library, located in unincorporated Fair Oaks, is the closest library to the Plan Area (0.65 miles south of the southern Plan Area boundary). The Sacramento Public Library operates this library.

3.11.2 REGULATORY SETTING

STATE

California Fire Code

The California Fire Code contains regulations relating to construction and maintenance of buildings and the use of premises. Topics addressed in the Code include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, hazardous materials storage and use, provisions to protect and assist first responders, industrial processes, and many other general and specialized fire safety requirements for new existing buildings and premises.

California Health and Safety Code

State fire regulations are set forth in Sections 13000 et seq. of the California Health and Safety Code. This includes regulations for building standards (as also set forth in the California Building Code), fire protection and notification systems, fire protection devices such as extinguishers and smoke alarms, high-rise building and childcare facility standards, and fire suppression training.

California Code of Regulations

The California Code of Regulations, Title 5 Education Code, governs all aspects of education within the State.

Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50)

The "Leroy F. Greene School Facilities Act of 1998," also known as Senate Bill No. 50 or SB 50 (Chapter 407, Statutes of 1998), governs a school district's authority to levy school impact fees. This comprehensive legislation, together with the $9.2 billion education bond act approved by the voters in November 1998 known as "Proposition 1A", reformed methods of school construction financing in California. SB 50 instituted a new school facility program by which school districts can apply for state construction and modernization funds. It imposed limitations on the power of cities and counties to require mitigation of school facilities impacts as a condition of approving new development and provided the authority for school districts to levy fees at three different levels:

- **Level I** fees are the current statutory fees allowed under Education Code 17620. This code section provides the basic authority for school districts to levy a fee against residential and commercial construction for the purpose of funding school construction or reconstruction of facilities. These fees vary by district for residential construction and commercial construction and are increased biannually.
- **Level II** fees are outlined in Government Code Section 65995.5, allowing school districts to impose a higher fee on residential construction if certain conditions are met. These conditions include having a substantial percentage of students on multi-track year-round scheduling, having an assumed debt equal to 15–30 percent of the district's bonding capacity (percentage is based on revenue sources for repayment), having at least 20 percent of the district's teaching stations housed in relocatable classrooms, and having placed a local bond on the ballot in the past four years which received at least 50 percent plus one of the votes cast. A Facility Needs Assessment must demonstrate the need for new school facilities for unhoused pupils is attributable to projected enrollment growth from the construction of new residential units over the next five years.
- **Level III** fees are outlined in Government Code Section 655995.7. If State funding becomes unavailable, this code section authorizes a school district that has been approved to collect Level II fees to collect a higher fee on residential construction. This fee is equal to twice the amount of Level II fees. However, if a district eventually receives State funding, this excess fee may be reimbursed to the developers or subtracted from the amount of state funding.

Quimby Act

California Government Code Section 66477, Subdivision Map Act, referred to as the Quimby Act, permits local jurisdictions to require the dedication of land and/or the payment of in-lieu fees solely for park and recreation purposes. The required dedication and/or fees are based upon the residential density, parkland cost, and other factors. Land dedication and fees collected pursuant

to the Quimby Act may be used for acquisition, improvement, and expansion of park, playground, and recreational facilities or the development of public school grounds.

LOCAL

City of Citrus Heights General Plan

The City of Citrus Heights General Plan contains the following goals and policies that are relevant to public services and recreation:

COMMUNITY HEALTH ELEMENT

Goal 56: Strive to provide consistently responsive, efficient and customer-oriented government services and facilities.

Policy 56.1: Pursue a high level of accessibility and responsiveness for all City departments.

Policy 56.2: Continue to follow and update the City's Strategic Plan to provide clear direction for the City's annual work program.

Goal 57: Provide for the timely development of public facilities and programs and the maintenance of service levels for these facilities and programs.

Policy 57.1: Require new development that generates the need for new public facilities to fund its fair share of construction of those facilities.

Policy 57.2: Ensure that service demands created by new development do not erode existing service levels.

Policy 57.3: Ensure through the development review process that adequate public facilities and services are available to serve new development. The City shall not approve new development where existing facilities are inadequate unless:

- The applicant can demonstrate that all necessary public facilities will be installed or adequately financed (through fees or other means); and
- The facility improvements are consistent with applicable Facility Master Plans adopted by the City.

Policy 57.4: Prepare Facility Master Plans to identify levels of service and ensure compliance with appropriate State and federal laws, to identify the best use of modern and cost-effective technologies, and ensure compatibility with current land use policy.

Policy 57.5: Seek funding sources for new public facilities and services.

Goal 58: Ensure excellent public safety services and rapid and effective emergency response.

Policy 58.1: Provide police staffing as necessary to meet community needs.

Policy 58.5: Consider public safety issues in all aspects of public facility, commercial, and residential project design, including crime prevention through environmental design.

Policy 58.6: Continue and expand the use of volunteers in provision of public safety services.

Policy 58.7: Continue working with Sacramento Metropolitan Fire District to ensure coordination of fire and emergency medical services in the City and surrounding areas.

Policy 58.8: Provide fire/emergency staffing as necessary in proportion to population or other appropriate workload indicators.

Policy 58.11: Ensure that new development is constructed, at a minimum, to the fire safety standards contained in the Citrus Heights Fire and Building Codes.

Policy 58.12: Ensure that anticipated fire response times and fire flows are taken into consideration as a part of the development review process.

Policy 58.13: Provide adequate access for emergency vehicles, particularly fire fighting equipment, in all new development.

Policy 58.14: Regulate the storage of flammable and explosive material and strongly encourage the proper transportation of such materials.

Goal 59: Ensure that ample and appropriate parks and recreation facilities and programs are available to all residents.

Policy 59.1: Support the provision of recreation and leisure programs for all community residents.

Policy 59.2: Promote acquisition and improvement of both developed and undeveloped park sites and provide recreation facilities necessary to meet or exceed the level of 3.55 parkland acres per 1,000 residents.

Goal 61: Achieve academic excellence and provide high-quality educational facilities.

Policy 61.1: Recognize the importance of schools to the social and economic vitality of the City.

Policy 61.2: Work with the San Juan Unified School District and citizens to ensure sufficient school facilities to provide educational services to all local students.

Policy 61.8: Assist the San Juan Unified School District in anticipating and addressing school expansion and development requirements.

3.11.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on public services if it would result in:

Substantial adverse physical impacts associated with the provision of new or physically altered government facilities, and/or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:

- Fire Protection
- Police Protection
- Schools
- Parks
- Other public facilities

IMPACTS AND MITIGATION MEASURES

Impact 3.11-1: Specific Plan implementation is not anticipated to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered police facilities (Less than Significant)

The Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. As such, any increase in demand for police services would occur gradually over time as additional development is added to the area.

The CHPD currently provides first-response service for the Plan Area, and would continue to serve the Plan Area upon development of the proposed Specific Plan. Through General Plan Policy 58.5, the City encourages the use of crime prevention through environmental design. Examples of crime prevention through environmental design include maximizing visibility of parking areas and building entrances, defining property lines and distinguishing private spaces from public spaces, and prohibiting entry or access using window locks, dead bolts, and interior door hinges, in the design of residences and commercial buildings. The design of the Specific Plan would not create any obstacles to the provision of law enforcement services to the Plan Area or to surrounding land/land uses.

Revenue generated by the Specific Plan in the form of parcel and property taxes, sales tax, and assessments could be used to increase funding for CHPD services within the City. Since the Specific Plan is not expected to present physical obstacles for law enforcement officers responding to calls,

or require law enforcement officers to travel to remote locations, the Specific Plan is not expected to lengthen response times to levels above CHPD standards.

The Specific Plan would not include development of any police department facilities. New or expanded facilities would not be required to serve the Plan Area, and the Plan Area is currently served by the CHPD. Impact fees from new development are collected based upon projected impacts from each development. The adequacy of impact fees is reviewed on an annual basis to ensure that the fee is commensurate with the service. Payment of the applicable impact fees by the project applicant, and ongoing revenues that would come from property taxes, sales taxes, and other revenues generated by the Specific Plan, would fund costs associated with police services.

The Specific Plan would contribute to the funding of additional police facilities, services, and equipment necessary to serve the Specific Plan through property taxes, sales tax, and assessments. However, the Specific Plan does not include development of any police department facilities and police department facilities are not anticipated to be constructed or expanded off-site in association with the Specific Plan. Therefore, the Specific Plan's impacts associated with substantial adverse physical impacts related to the construction, provision, or need for police facilities would be ***less than significant***.

Impact 3.11-2: Specific Plan implementation is not anticipated to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered fire protection facilities (Less than Significant)

As noted previously, the Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. As such, any increase in demand for fire protection services would occur gradually over time as additional development is added to the area.

The SMFD currently provides fire protection service for the Plan Area, and would continue to serve the Plan Area upon development of the proposed Specific Plan. The Specific Plan proposes residential, retail, mixed use, office, community, and hotel development in an area adjacent to existing urbanized land uses. General Plan Policy 58.11 requires that development is constructed, at a minimum, to the fire safety standards contained in the Citrus Heights Fire and Building Codes. There are no large areas of dry vegetation near the Plan Area that would pose a substantial risk of wildfire to the Plan Area. The Specific Plan is not expected to substantially increase the risk of fire in the area.

The Specific Plan would be required to comply with General Plan Policies 57.1, 57.2, 58.7, 58.8, 58.9, 58.11, 58.12, 58.13, and 62.1. In accordance with these policies, all new development must meet applicable building codes and maintain street widths and turning radii to accommodate fire protection equipment. In addition, these policies mandate that new development ensure adequate fire pressure and water volume is available for firefighting. Compliance with the General

Plan policies related to fire safety would be required prior to issuance of grading and building permits and would ensure that no obstacles to the provision of fire protection and emergency services to the Plan Area occur.

SMFD outlines fire prevention standards to be incorporated into new residential and commercial development. These standards include access arrangements, fire hydrant placement, fire flow availability and requirements, and plan submittal requirements. SMFD also requires installation of automatic fire sprinklers in all new commercial construction and all new one-family dwellings, two-family dwellings, and manufactured homes. On-site equipment and design would be reviewed and approved by SMFD prior to issuance of building permits. Compliance with the SMFD standards and the Citrus Heights Fire and Building Codes would improve the fire resistance of new buildings.

The Plan Area is within Station 21's first due area. From July 2019 to June 2020, the average response time was 5 minutes and 42 seconds. SMFD met the time target standard 66 percent of the time. However, according to the SMFD, the SMFD's response time to the Plan Area is improved, and the target standard is met 80 to 90 percent of the time.[3]

According to the SMFD, call volume is the biggest constraint to meeting its response time target goals. Simultaneous calls create a draw on the system, which pulls resources out of the first due area. One of SMFD's goals is to limit annual responses for one apparatus to 3,500 runs per year. Once that threshold is reached, SMFD must plan for additional resources. Based on the Plan Area's estimated population increase, the SMFD anticipates the Specific Plan could add up to 800 runs per year to Station 21's workload at full buildout. Should the Specific Plan be approved, the SMFD will add the Specific Plan development to its Impact Fee Nexus Study to ensure the Specific Plan pays for its fair share of capital costs.[4]

Funding for fire services and facilities resulting from new construction is facilitated through SMFD's Capital Fire Facilities Fee Schedule. The fee is used exclusively to defray costs associated with property acquisition, site preparation, design, construction, and equipping new fire stations that are required to serve new development. Additional funds are generated by ambulance transport fees and service fees (mostly from fire prevention plan checking charges).

The Specific Plan would not include development of any fire department facilities. New or expanded facilities would not be required to serve the Plan Area. The Plan Area is currently served by the SMFD. Impact fees from new development are collected based upon projected impacts from each development. The adequacy of impact fees is reviewed on an annual basis to ensure that the fee is commensurate with the service. Payment of the applicable impact fees by the project applicant, and ongoing revenues that would come from property taxes, sales taxes, and other revenues generated by the Specific Plan, would fund costs associated with fire services.

[3] Personal Communication with Jeff Frye, Sacramento Metro Fire District, October 21, 2020.
[4] Personal Communication with Jeff Frye, Sacramento Metro Fire District, October 21, 2020.

The Specific Plan would be required to contribute to the funding of additional fire protection facilities, services, and equipment necessary to serve the Plan Area and would incorporate SMFD requirements into future project designs. However, the Specific Plan does not include development of any fire protection facilities and fire protection department facilities are not anticipated to be constructed or expanded off-site as a result of the Specific Plan. Therefore, the Specific Plan's impacts associated with substantial adverse physical impacts related to the construction, provision, or need for fire protection facilities would be ***less than significant***.

Impact 3.11-3: Specific Plan implementation is not anticipated to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered school facilities (Less than Significant)

As noted previously, the Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. As such, any increase in demand for school services would occur gradually over time as additional development is added to the area.

The Plan Area is within the boundaries of SJUSD. The Specific Plan would facilitate the future development of residential units that would directly increase the student population in the area. The Specific Plan may also indirectly increase the number of persons in the area as a result of employment potential; however, it is not possible to determine at this time whether employment opportunities would be utilized by the existing population with existing students in the schools or if employees would be recruited from outside the region, bringing new students to Citrus Heights.

The Specific Plan would include the development of up to 2,220 residential units. The standard student generation rate per household of 0.343 for K–8 students is used to calculate the number of elementary school students the Specific Plan would be expected to generate.[5] Student generation rates indicate that the Specific Plan would result in approximately 761 elementary school students (0.343 students per household × 2,220 units = 761 K–8 students). The standard student generation rate per household of 0.2362 for high school students is used by the SJUSD to calculate the number of high school students the Specific Plan would be expected to generate.[6] Student generation rates indicate that the Specific Plan would result in approximately 524 high school students (0.2362 students per household × 2,220 residential units = 524 high school students).

The SJUSD maintains an Open Enrollment policy to offer choice and to help equalize site capacities and enrollment figures throughout the District. If a school in a particular neighborhood is at or over capacity, the SJUSD may provide bussing to accommodate students at nearby schools not

[5] Draft Environmental Impact Report for the Mitchell Farms Subdivision (State Clearinghouse Number 2017062078). Page 4.10-28.
[6] Draft Environmental Impact Report for the Mitchell Farms Subdivision (State Clearinghouse Number 2017062078). Page 4.10-29.

experiencing capacity restrictions. Currently, SJUSD requires a development fee of $4.08 per square foot and $0.66 per square foot for commercial or industrial construction, which would provide funding for school construction, reconstruction, and modernization effects to accommodate the addition of 761 students from the Specific Plan.

As required by state law, the project applicant for individual development projects within the Specific Plan area would pay the state-mandated school impact fees to SJUSD. The California Legislature has declared that the school impact fee is deemed to be full and adequate mitigation under CEQA (California Government Code Section 65996). The Specific Plan would not include development of any school facilities. Payment of the required school impact fee would reduce the Specific Plan's impacts associated with school facilities to ***less than significant***.

Impact 3.11-4: Specific Plan implementation is not anticipated to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered park and recreational facilities (Less than Significant)

As noted previously, the Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. As such, any increase in demand to park and recreation facilities would occur gradually over time as additional development is added to the area.

The Specific Plan would directly increase the number of persons in the area as a result of employment potential, and residential uses. The Specific Plan includes up to 2,220 residential units. The addition of up to 2,220 housing units at full buildout has the potential to increase the population of the city by an estimated 5,661 persons (based on a persons per dwelling unit factor of 2.55, in accordance with the Citrus Heights General Plan). However, for the purposes of collecting fees to mitigate for increase park demands (Quimby Act), the California Government Code Section 66477 states: *The amount of land dedicated or fees paid shall be based upon the residential density, which shall be determined on the basis of the approved or conditionally approved tentative map or parcel map and the average number of persons per household. There shall be a rebuttable presumption that the average number of persons per household by units in a structure is the same as that disclosed by the most recent available federal census or a census taken pursuant to Chapter 17 (commencing with Section 40200) of Part 2 of Division 3 of Title 4.*

The City of Citrus Heights Policy 59.2 outlines a parkland standard of 3.35 acres per 1,000 residents. Currently, the SRPD maintains a ratio of approximately 3 acres per 1,000 residents. Of the 508 acres maintained by SRPD (located across Citrus Heights, Antelope, and Foothill Farms), 307 acres are within the Citrus Heights area. The City's 2019 population was estimated to be 88,095, which results in an existing park service level of 3.28 acres per 1,000 residents. However, if the SRPD were to make park facility improvements on the 61 acres of undeveloped parkland in the City, Citrus Height's existing park standard would rise to about 3.97 acres per 1,000 residents.

As required by General Plan Policy 59.2, the City shall promote acquisition and improvement of both developed and undeveloped park sites and provide recreation facilities necessary to meet or exceed the level of 3.55 parkland acres per 1,000 residents. The addition of up to 2,220 housing units at full buildout has the potential to increase the population of the city by an estimated 5,661 persons (based on a persons per dwelling unit factor of 2.55, in accordance with the Citrus Heights General Plan). Under the standard outlined in Policy 59.2 and with the proposed addition of 5,661 residents, the Specific Plan would need to create 20.1 acres of parkland to meet the City's standard. The proposed Specific Plan includes approximately 9.1 acres of open space. Additionally, the Specific Plan includes ample recreation facilities, such as multi-use trails, plazas, and public recreation areas (such as the Sunrise Steps, the public event space along Sunrise Boulevard, and the community green). As such, while the Specific Plan falls short of the required 20.1 acres of parkland, the Specific Plan would provide a substantial amount of passive open space, parkland, and recreational amenities.

The environmental impacts of development of the proposed on-site open space, park and recreation facilities are addressed as part of the proposed Specific Plan and are analyzed throughout this EIR. Development of the park area is anticipated as part of the Specific Plan and is included in the impact discussions associated with development of the Plan Area included in this Draft EIR, including analysis of impacts associated with aesthetics, air quality, cultural and tribal cultural resources, geology and soils, greenhouse gases and energy, hazards and hazardous materials, hydrology and water quality, land use, noise, population and housing, public services and recreation, transportation and circulation, and utilities. The Specific Plan does not propose any off-site parks and no expansion or development of off-site parks is anticipated as part of the Specific Plan.

The City collects impact fees for parks from new development based upon projected impacts from the development. The project applicant for individual development projects within the Specific Plan would be required to pay the in-lieu parkland fee, dedicate land for parkland uses, or provide a combination of dedication and in-lieu fees, as determined by the City. The Specific Plan is not anticipated to result in any significant environmental impacts associated with park and recreation facilities, beyond those discussed in Sections 3.1 through 3.13 and 4.0 of this Draft EIR, therefore, this impact is considered ***less than significant***.

Impact 3.11-5: Specific Plan implementation is not anticipated to result in substantial adverse physical impacts associated with the provision of or need for new or physically altered other public facilities (Less than Significant)

As noted previously, the Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. As such, any increase in demand for other public facilities would occur gradually over time as additional development is added to the area.

Sacramento County, as a regional government, provides countywide services, including public health, elections, and criminal prosecutions. The Specific Plan would increase demand for other public facilities within the City of Citrus Heights, such as libraries and community buildings. It is anticipated that the library service demands of the Specific Plan residents would be accommodated by the existing Sacramento Public Libraries. Revenue generated by the Specific Plan in the form of special taxes, assessments, and fees would cover the costs of providing library services to the Plan Area, including costs of acquiring new volumes for the library collection. Payment of the applicable impact fees by the project applicant, and ongoing revenues that would come from property taxes, sales taxes, and other revenues generated by the Specific Plan, would fund capital and labor costs associated with these other public services.

Additionally, the Specific Plan includes community and institutional uses for residents and employees, such as child care centers, gyms, community centers, and other public spaces. The environmental impacts of construction of these uses are addressed as part of the proposed Specific Plan and considered throughout this EIR. Overall, construction of other public or community facilities would not be warranted.

The Specific Plan would not result in the need for new facilities or expansion of existing facilities associated with other public services and facilities, such as libraries and community buildings. Consequently, new or expanded facilities for other public services are not proposed at this time or required to serve the Specific Plan. The Specific Plan would not result in the need for new facilities for other public services, thus it will have a ***less-than-significant*** impact relative to this topic.

This section analyzes the potential impacts of the Specific Plan on the transportation system. This section identifies the potential transportation impacts of future buildout of the Plan Area and recommends mitigation measures to lessen their significance. Information in this section is derived primarily from the following (as well as other information described in this section):

- City of Citrus Heights General Plan (amended August 2019);
- Sacramento Regional Transit (RT) website (http://www.sacrt.com/);
- Sacramento Area Council of Governments (SACOG) 2020 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS);
- State of California, Governor's Office of Planning and Research, *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018);
- *Shared Parking, 3rd Edition* (Urban Land Institute, ICSC, and NPA, 2020);
- *City of Citrus Heights Bikeway Master Plan* (updated December 2015);
- *City of Citrus Heights Pedestrian Master Plan* (adopted May 2016);
- *City of Citrus Heights Transportation Impact Study (TIS) Guidelines* (2020);
- *Parking Generation Manual, 5th Edition* (Institute of Transportation Engineers [ITE], 2019);
- *Trip Generation Manual, 10th Edition* (ITE, 2017); and
- *Trip Generation Handbook, 3rd Edition* (ITE, 2017).

One comment pertaining to transportation and circulation was received in response to the Notice of Preparation (NOP) for this Draft EIR. The commenter, the Sacramento Metropolitan Air Quality Management District (SMAQMD, September 1, 2020), requested that the EIR examine vehicle-miles-traveled (VMT), impacts to transit use, active transportation modes, and other strategies which reduce motor vehicle emissions. Each of these topics are addressed in this section.

Unlike previous Draft EIRs published in Citrus Heights, this Draft EIR does not include any peak hour intersection level of service (LOS) results. This is due to the Senate Bill (SB) 743 and the implementing CEQA Guidelines, which became mandatory for lead agencies statewide on July 1, 2020. The legislation associated with this landmark law specified that "automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any."

In December 2018, the California Office of Planning and Research (OPR) published final technical guidance for implementing SB 743. On December 28, 2018, the Resources Agency adopted CEQA Guidelines Section 15064.3. Under that guideline, VMT was chosen as the primary metric used to identify transportation impacts. Hence, this chapter includes an extensive review of the Specific Plan's VMT. This section also addresses many other important transportation-related areas of concern including pedestrian/bicycle facilities, transit facilities and services, emergency vehicle response, hazardous conditions, and temporary construction-related conditions. A focused Local Transportation Analysis has also been prepared to evaluate the operations of intersections in the project vicinity. This report is included on the City's website for informational purposes.

3.12.1 ENVIRONMENTAL SETTING

PROJECT LOCATION

The Plan Area consists of approximately 95.8 acres located in the City of Citrus Heights on the current Sunrise Mall property. The Plan Area is situated four miles east of Interstate 80 (I-80), three miles south of the Roseville/Citrus Heights border, and five miles north of US Highway 50 (US 50).

Figure 3.12-1 shows the existing vehicular access points serving the property. As shown, access to the property is provided by one signalized and two unsignalized driveways on Greenback Lane, and by two signalized and four unsignalized driveways on Sunrise Boulevard.

Sunrise Mall is currently operational, though existing traffic levels measured at the property in Fall 2019 suggest it is generating trips at about 25 percent of what a fully operational mall would otherwise be generating. This is caused by vacant retail space and generally declining sales.

PROJECT AREA ROADWAYS

The following are descriptions of the primary roadways in the vicinity of the Plan Area:

Sunrise Boulevard is a north-south arterial that extends from the City of Roseville, through the City of Citrus Heights, and into unincorporated Sacramento County. Along the Plan Area frontage, the posted speed limit is 40 miles per hour (mph). Sunrise Boulevard is a six-lane arterial from US 50 north to Arcadia Drive where it narrows to four lanes.

Greenback Lane is an east-west arterial that begins at I-80 and extends easterly through the City of Citrus Heights, and into Folsom. Along the Plan Area frontage, the posted speed limit is 40 mph with three lanes in each direction separated by a center median or channelized left-turn pockets.

The following streets provide direct access to the Plan Area:

Arcadia Drive is a two-lane local street that extends northerly from Greenback Lane, and then westerly to connect with Sunrise Boulevard. The posted speed limit is 25 mph. This roadway also extends in a southerly direction as a private street within the Plan Area, ultimately terminating in the southeast corner of the Plan Area.

Macy Plaza Drive is a two-lane east-west collector street west of Sunrise Boulevard, connecting with Birdcage Street, which is a two-lane collector street between Greenback Lane and Uplands Way. East of Sunrise Boulevard, Macy Plaza Drive extends within the Plan Area as a four-lane undivided private street, ultimately connecting to Sunrise East Way in the southeast corner of the Plan Area.

Sunrise Vista Drive is a north-south two-lane local street that extends from Greenback Lane to Sunrise East Way, approximately 350 feet to the east of the easterly project site boundary. This roadway is accessed from the Plan Area by two east-west connector streets.

Table 3.12-1 displays the existing average daily volume of traffic (ADT) on the arterial roadways near the Plan Area. As shown, daily traffic levels range from 35,000 to 47,900 vehicles per day, with the busiest segment being Greenback Lane west of Sunrise Boulevard.

TABLE 3.12-1: EXISTING AVERAGE DAILY TRAFFIC (ADT) VOLUMES

#	STREET	SEGMENT	NUMBER OF LANES	ADT [1]
1	Greenback Lane	Between Sunrise Blvd and San Juan Avenue	6	47,900
2	Greenback Lane	Between Sunrise Blvd and Fair Oaks Boulevard	6	35,000
3	Sunrise Boulevard	Between Arcadia Drive and Woodmore Oaks	6	40,500
4	Sunrise Boulevard	North of Macy Plaza Drive	6	38,300
5	Sunrise Boulevard	South of Macy Plaza Drive	6	40,500

NOTE:

[1] VOLUMES INCLUDE BOTH DIRECTIONS OF TRAVEL AND ARE ROUNDED TO THE NEAREST HUNDRED VEHICLES. COUNTS COLLECTED AT LOCATIONS 1-4 BETWEEN APRIL 2017 AND APRIL 2019 WHILE SCHOOLS WERE IN SESSION. AT SEGMENT 5, DAILY VOLUME ESTIMATED BASED ON FACTORING OF THE DIFFERENCE IN AM AND PM PEAK HOUR TRAFFIC NORTH AND SOUTH OF MACY PLAZA DRIVE.

SOURCE: CITY OF CITRUS HEIGHTS TRAFFIC COUNTS DATABASE: HTTP://WWW.CITRUSHEIGHTS.NET/893/TRAFFIC-COUNTS

Table 3.12-2 displays the number of reported collisions at the four signalized intersections along the Plan Area frontage from January 2016 through September 2020. This data indicates an average of 17 collisions per year occurred at the Sunrise Boulevard/Greenback Lane intersection. The most common collision type was a rear-end crash, and the most common primary collision factor was unsafe speed. The much higher rate of collisions at this intersection versus the other three intersections is to be expected given that substantially more traffic passes through the Sunrise Boulevard/Greenback Lane intersection than the others.

TABLE 3.12-2: COLLISION HISTORY (2016-2020)

INTERSECTION	AVERAGE COLLISIONS PER YEAR [2]	TOTAL NUMBER OF COLLISIONS [1]					MOST COMMON COLLISION TYPE	MOST COMMON PRIMARY COLLISION FACTOR (PCF)
		TOTAL COLLISIONS	INJURY COLLISIONS	INVOLVING PEDS OR BICYCLISTS	FATALITIES	INVOLVING DUIS		
Sunrise Blvd./ Greenback Ln.	17	77	34	5	0	9	Rear-End	Unsafe Speed
Sunrise Blvd./ Birdcage Ctr./ Sunrise Mall	6	28	16	6	0	0	Broadside	Unsafe Speed
Sunrise Blvd. / Macy Plaza Dr.	6	28	8	1	0	0	Broadside	Traffic Signals and Signs
Greenback Ln./ Arcadia Dr.	5	21	15	3	0	0	Broadside	Improper Turning/Traffic Signals and Signs

NOTES:

[1] DATA IS FROM 01/01/2016 TO 09/22/2020. INTERSECTION RELATED COLLISIONS ARE DEFINED AS COLLISIONS THAT OCCUR WITHIN 250 FEET OF THE INTERSECTION.

[1] AVERAGED BASED ON 4.75 YEARS OF DATA.

SOURCE: CROSSROADS DATA PROVIDED BY CITY OF CITRUS HEIGHTS.

The other three signalized intersections each averaged five or six collisions per year. The Sunrise Boulevard/Birdcage Center/Sunrise Mall intersection featured the most collisions involving bicyclists or pedestrians. The Greenback Lane/Arcadia Drive intersection had the highest rate of collisions that caused injuries.

PEDESTRIAN AND BICYCLE FACILITIES

This section describes the existing pedestrian and bicycle facilities in the vicinity of the Plan Area.

Pedestrian Facilities

Figure 3.12-2 displays the pedestrian facilities located in the vicinity of the Plan Area. As shown, sidewalks are continuous along the Plan Area frontages on Greenback Lane and Sunrise Boulevard.

Crosswalks with push-button pedestrian signal activation are provided at the majority of all legs at the signalized intersections near the Plan Area. On Greenback Lane at Arcadia Drive, Sunrise Boulevard at Sunrise Mall Driveway, and Sunrise Boulevard at Macy Plaza Drive, a single crosswalk is provided at each location to cross the arterial. It should also be noted that some signalized crossings of Sunrise Boulevard do not include striped crosswalks or pedestrian signal heads, though these improvements are planned to be constructed by the City in 2021.

Bicycle Facilities

Within the vicinity of the Plan Area, bicycle facilities are limited to on-street Class II bike lanes (designated for bicyclist use by striping, pavement legends, and signs) on Macy Plaza Drive west of Sunrise Boulevard. This segment of bike lanes connects to Birdcage Street, which features continuous Class II bike lanes from south of Greenback Lane to Uplands Way. The Arcade Creek Park Preserve Multi-Use Trail (open to bicyclists and pedestrians) is situated west of Sunrise Boulevard and north of Greenback Lane. An additional multi-use trail is currently under construction east of Sunrise Boulevard within the Mitchell Village Planning Area. These two trails are proposed to be connected to the proposed Arcade-Cripple Creek Trail (formerly known as the Electric Greenway Trail) in 2021.

TRANSIT SERVICE

Transit service within the study area is provided by bus, which is operated by Sacramento Regional Transit (RT). Figure 3.12-3 displays the many bus stops located along the Plan Area frontage and in close proximity to the Plan Area. However, a bus stop is not present on the south side of Greenback Lane (i.e., along the Plan Area frontage) between Sunrise Boulevard and Fair Oaks Boulevard.

Table 3.12-3 summarizes current bus service provided (as of August 30, 2020)[1] on the three bus routes nearest to the Plan Area, which are:

[1] According to the RT website (https://www.sacrt.com/apps/sacrt-service-recovery-plan-to-restore-service-to-pre-covid-19-levels/), Sacramento RT has restored transit service levels for most of its bus and light rail routes to pre-COVID conditions. Accessed on October 1, 2020.

- Route 1 – Greenback (Sunrise Mall to Watt/I-80 LRT Station)[2]
- Route 21 – Sunrise (Mather Field/Mills Station to Louis & Orlando)
- Route 23 – El Camino (Sunrise Mall to Arden/Del Paso LRT Station)

TABLE 3.12-3: EXISTING REGIONAL TRANSIT (RT) BUS SERVICE ADJACENT TO PROJECT SITE

ROUTE	CONNECTIONS	STOPS	WEEKDAYS			WEEKENDS/ HOLIDAYS
			SERVICE HOURS [1]	HEADWAYS [2]	TOTAL BUSES PER DAY	HEADWAYS [3]
1	Sunrise Mall, American River College, Watt/I-80 LRT Station	Multiple stops along Greenback Ln. and at the bus transfer station on Arcadia Dr.	6 AM to 10 PM	Every 15 Minutes	EB: 62 WB: 62 Total: 124	30-minute headways
21	Sunrise Mall, Mather Field/Mills Station LRT Station (Rancho Cordova), Louis & Orlando Transit Center (Roseville)	Various stops along Sunrise Blvd.	6 AM to 10 PM	Every 30 Minutes	NB: 33 SB: 34 Total: 67	45 to 90-minute headways
23	Sunrise Mall, Arden/Del Paso LRT Station	Multiple stops along Greenback Ln. and at the bus transfer station on Arcadia Dr.	5 AM to 9 PM	Every 30 Minutes	EB: 38 WB: 38 Total: 76	45 to 90-minute headways

NOTES:

[1] SERVICE HOURS ARE APPROXIMATE.

[2] HEADWAYS REFER TO THE TIME BETWEEN SUCCESSIVE ARRIVING BUSES. SPECIFIED HEADWAYS OCCUR DURING THE MAJORITY OF EACH DAY, BUT INCREASED HEADWAYS (I.E., MORE TIME BETWEEN BUSES) MAY OCCUR IN THE SHOULDER HOURS (I.E., LATE EVENING) OF THE DAY.

[3] BUS SERVICE EXTENDS FROM APPROXIMATELY 7 AM TO 10 PM. HEADWAYS VARY BY TIME-OF-DAY AND DAY OF WEEK.

SOURCE: SACRAMENTO REGIONAL TRANSIT WEBSITE: HTTPS://WWW.SACRT.COM/APPS/SACRT-SERVICE-RECOVERY-PLAN-TO-RESTORE-SERVICE-TO-PRE-COVID-19-LEVELS/.

This table shows that 267 buses stop near Sunrise Mall on a typical weekday, which suggests a plentiful supply of transit that connects the Plan Area to many popular destinations.

Sacramento RT operates its SmaRT Ride service within Citrus Heights, Antelope, and Orangevale. This service is similar to rideshare services offered by Uber and Lyft, in which passengers are provided "curb-to-curb service". Customers can use a smartphone app, go online, or dial a phone number to request a ride. Wait times for service are subject to vehicle availability and demand, and may include stops for multiple passengers.

For RT bus routes and the SmaRT Ride service, the cost for a single ride is $2.50 per adult, and $1.25 for seniors, persons with disabilities, and students. Daily and monthly (bus-only) passes are also offered.

[2] According to the RT website (https://sacrt.com/documents/RT%20Fact%20Sheets/RTFactSheet.pdf)., Route 1 is the third busiest bus line in Sacramento RT's system. Accessed on October 1, 2020.

3.12.2 REGULATORY SETTING

Existing transportation policies, laws, and regulations that would apply to the Specific Plan are summarized below. This information provides a context for the impact discussion related to the Plan's consistency with applicable regulatory conditions and development of significance criteria for evaluating project impacts.

STATE

Senate Bill 743

SB 743, passed in 2013, required the California Governor's OPR to develop new CEQA guidelines that address traffic metrics under CEQA. As stated in the legislation, upon adoption of the new guidelines, "automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any." In December 2018, OPR published Technical Advisory on Evaluating Transportation Impacts in CEQA, which provided guidance for implementing SB 743. On December 28, 2018, the Resources Agency adopted CEQA Guidelines Section 15064.3. Under this guideline, VMT is the primary metric used to identify transportation impacts. On July 1, 2020, the provisions of Section 15064.3 became effective statewide.

Caltrans

In May 2020, the California Department of Transportation (Caltrans) published the Vehicle Miles Traveled-Focused Transportation Impact Study Guide (TISG), which replaced its Guide for the Preparation of Traffic Impact Studies (2002). The TISG generally endorses the policies, technical approaches, and recommendations from OPR's Technical Advisory. It also indicates that Caltrans intends to "transition away from requesting LOS or other vehicle operations analyses of land use projects", instead placing the focus on VMT and safety.

As a follow-up to the TISG, Caltrans published the Interim Land Development and Intergovernmental Review (LDIGR) Safety Review Practitioners Guidance in July 2020. This document provides interim guidance for conducting safety reviews of land use projects and plans that may affect the State Highway System. Although the LDIGR Safety Review Practitioners Guidance stops short of including specific thresholds of significance or providing recommendations for how safety evaluations should be included in CEQA documents, it does clearly indicate the State's expectation that, when appropriate, CEQA studies of land use projects should include safety investigations of the State Highway System. Furthermore, that document specifies that mitigation measures for identified safety impacts should avoid increasing roadway capacity, which may induce VMT or affect conditions for vulnerable users, such as bicyclists of pedestrians.

REGIONAL

SACOG MTP/SCS

SACOG is an association of local governments in the six-county Sacramento region. SACOG provides transportation planning and funding for the region and serves as a forum for the study and resolution of regional issues. In addition to preparing the region's long-range transportation plan, SACOG approves the distribution of affordable housing in the region and assists in planning for transit, bicycle networks, clean air and airport land uses. In November 2019, the SACOG Board adopted the 2020 MTP/SCS, which provides a 20-year transportation vision and corresponding list of planned and programmed projects. The MTP/SCS project list identifies complete streets improvements for portions of Greenback Lane and Sunrise Boulevard.

The MTP/SCS identifies the redevelopment of Sunrise Mall as an opportunity to encourage infill development in the City. The MTP/SCS forecast for Citrus Heights is 1,500 new housing units and 3,420 new employees by 2040. It also projects that the City's jobs/housing balance of 0.6 in 2016 will remain unchanged in 2040. It should be noted that these forecasts did not contemplate the proposed Specific Plan.

Sacramento Regional Transit

According to the Sacramento RT website[3], Bus Rapid Transit (BRT) is being evaluated along key economic development corridors in the Sacramento region. BRT provides high capacity bus service including prioritization for buses within congested areas (via bus-only lanes and queue bypass lanes). Sunrise Boulevard is listed among the potential corridors for BRT service. However, such an improvement is not included in the programmed MTP/SCS project list.

LOCAL

City of Citrus Heights General Plan

The City of Citrus Heights General Plan provides goals, policies, and programs regarding transportation, including the following:

COMMUNITY DEVELOPMENT ELEMENT

Goal 13: Increase activity in the Sunrise MarketPlace through transportation investments that enhance the convenience and safety of driving, riding transit, bicycling, and walking to, from, and within the district.

> **Policy 13.5:** Promote transit-oriented development through reuse and redevelopment of opportunity sites near the Greenback Lane/ Sunrise Boulevard intersection, including potential mixed use projects with a residential component. Coordinate potential development plans with transit near this intersection.

[3] https://www.sacrt.com/apps/sacrt-initiatives/. Accessed on October 1, 2020.

Goal 29: Plan, design, construct, and manage a Complete Streets transportation network that accommodates the needs of all mobility types, users and ability levels.

Policy 29.1: When constructing or modifying transportation facilities, strive to provide for the movement of vehicles, commercial trucks, alternative and low energy vehicles, transit, bicyclists and pedestrians appropriate for the road classification and adjacent land use.

Policy 29.2: Measure customer satisfaction related to vehicle travel using level of service (LOS) according to procedures in the latest version of the Highway Capacity Manual published by the Transportation Research Board. The City will strive to achieve LOS E or better conditions for City roadways and intersections during peak hours (these may include weekday AM, mid-day, and PM hours as well as Saturday mid-day or PM peak hours). The intent of the policy is to effectively utilize the roadway network capacity while balancing the desire to minimize potential adverse effects of vehicle travel on the environment and other modes.

Exceptions to LOS E are allowed for both roadway segments and intersections along the following streets:

- Sunrise Boulevard – south City limits to north City limits
- Greenback Lane – west City limits to east City limits
- Old Auburn Road – Sylvan Road to Fair Oaks Boulevard
- Antelope Road – I-80 to Auburn Boulevard
- Auburn Boulevard – Old Auburn Road to northern City limits

No road widening to provide additional vehicle capacity of the above listed streets will be permitted. Development projects that impact these locations according to the City's transportation impact study guidelines would require mitigation, including, but not limited to, the following items:

- actions that reduce vehicle trips or provide non-auto improvements to the transportation network or services
- lengthening of turn pockets
- signal timing modifications

Additional exceptions may be allowed by the City Council at both exempt and non-exempt locations where mitigation is infeasible or would conflict with other community values such as those listed below:

- Impacts on general safety, particularly pedestrian, bicycle, and transit safety
- The right-of-way needs and the physical impacts on surrounding private or public properties
- The visual aesthetics of the required improvement and its impact on community identity and character
- Environmental impacts including air quality and noise impacts

- Impacts on quality of life as perceived by residents

Policy 29.3: Require development proposals to analyze future transportation impacts and mitigate significant impacts consistent with Policies 29.1 and 29.2.

Policy 29.4: Support safe, complete and well-connected neighborhood street, bicycle, and pedestrian access and connections that balance circulation needs with the neighborhood context.

Policy 29.8: Minimize the number of access points along arterial roadways, including by consolidating or relocating driveways to provide for more efficient traffic movement.

Goal 31: Provide access to public transit service to all Citrus Heights residents and high quality, frequent public transit service to those residents living along designated transit routes.

Policy 31.4: Require new development to provide transit enhancements, (including, but not limited to bus pull-outs and bus shelters) where appropriate, that decrease transit travel times, improve access to transit stops, or improve the amenities, security, or travel information at transit stops.

The intersection LOS standards contained in General Plan Policy 29.2 have been included above despite LOS no longer being used as a significance criterion for roadway network impacts under CEQA. Policy 29.2 includes several important policy considerations for expanding and managing the City's roadway network, particularly those facilities such as Greenback Lane and Sunrise Boulevard, which serve considerable levels of through traffic. Those policy considerations are important when evaluating potential site-specific access improvements.

City of Citrus Heights Bicycle Master Plan

The Citrus Heights Bikeway Master Plan (updated December 2015) enables the City to construct bikeway improvements and be competitive for grant funding to construct bikeways throughout the community. The Bikeway Master Plan outlines goals, policies, and implementation actions to create and maintain appropriate bicycle infrastructure to enhance regional connectivity. Those that are particularly relevant to the proposed project are described below:

Goal 1: Provide a connected bikeway system in the City of Citrus Heights to improve the quality of life for all residents and visitors.

Objective: Construct bikeways identified in the proposed system and provide for the maintenance of both existing and new facilities.

Policy 1.3: Require all bikeways to conform to design standards contained in the latest version of the Highway Design Manual, Chapter 1000: Bikeway Planning and Design, Caltrans, unless otherwise established by the City of Citrus Heights.

Policy 1.7: Emphasize the development and construction of off-street bikeways to promote safety and recreational opportunities.

Goal 2: Include bikeway facilities in all appropriate development projects to facilitate on-site circulation for bicycle and pedestrian travel, on-site bicycle parking, and connections to the proposed system.

Objective: Maximize the number of daily trips made by bicycling to and from new development projects.

Policy 2.1: Require development projects to construct bikeways included in the proposed system as a condition of development. (Dedication of bicycle easements may be required by the City due to the timing of future connectivity.)

Policy 2.2: Encourage commercial development to provide bicycle access to surrounding residential areas.

Policy 2.3: Require commercial development to place bike racks near entrances for employees and customers.

Goal 3: Develop a bikeway system that enhances safety and convenience of bicycling to and from work and school.

Objective: Increase bicycle trips to work and school to reduce vehicle congestion, improve air quality, and improve individual physical fitness.

Policy 3.1: Support facilities that encourage bicycling should, to the extent feasible, be made a standard component of all private and public projects.

Policy 3.2: Provide short term bike parking (bike racks) conveniently located at business entrances and safe, secure and covered long term bike parking (bike lockers, bike rooms, bike cages) at employment sites.

Policy 3.3: Promote showers and changing facilities at major employment sites.

Goal 4: Educate and inform all residents and visitors to the City of Citrus Heights about how to use bikeway facilities safely and create a climate of acceptance for bike riding.

Objective: Improve bicycle conditions in the City of Citrus Heights by reducing collisions and increasing the number of bikeway system users.

Policy 4.1: Incorporate standard signing and traffic controls as established by Caltrans to ensure a high level of safety for the bicyclist and motorist.

According to the *Bikeway Master Plan*, the following bicycle facilities are proposed in the project vicinity:

- **Sunrise Boulevard** – Class II bike lanes are proposed to be continuous along Sunrise Boulevard from the southern to northern city limit.
- **Greenback Lane** – Class II bike lanes are proposed from east of Birdcage Street to Fair Oaks Boulevard.

- **Arcadia Drive** – Class II bike lanes are proposed from Sunrise Boulevard to Greenback Lane.
- **Sunrise Vista Drive** – Class II bike lanes are proposed from Greenback Lane to Sunrise East Way.

For Class I (off-street) facilities, the *Bikeway Master Plan* identifies a minimum 8-foot cross-section. For Class II lanes (on-street, with designated lane, signage, and pavement markings), it identifies a minimum 6-foot bike lane (measured to the face of curb) and a minimum 5-foot bike lane when adjacent to on-street, parallel parking.

City of Citrus Heights Pedestrian Master Plan

The City of Citrus Heights Pedestrian Master Plan (adopted May 2016) outlines the steps the City intends to take to improve the pedestrian network and increase the number of trips made by walking. The following vision, goals, and objectives from the Pedestrian Master Plan are relevant to this study:

Vision: The City of Citrus Heights envisions a walking environment that supports active living, provides for safe and healthy transportation, embraces the unique character in its neighborhoods, and enables people of all ages and abilities to access jobs, recreation, school, shopping and transit by walking as a part of daily life.

Goal 1: Improve walking safety.

Objective 1.A: Reduce the number of pedestrian related collisions, injuries and fatalities.

Objective 1.B: Reduce the severity of pedestrian related collisions.

Objective 1.C: Create an environment where people feel safe walking in Citrus Heights.

Goal 2: Increase and Improve pedestrian access for all ages and abilities throughout the community.

Objective 2.A: Plan, design, construct, and manage a Complete Streets transportation network that accommodates the needs of all mobility types, users and ability levels.

Objective 2.B: Work to eliminate barriers to pedestrian travel.

Goal 4: Develop a walking environment that supports a vibrant community.

Objective 4.A: Create vibrant public spaces that encourage walking.

Objective 4.B: Create vibrant pedestrian friendly street environments in commercial and retail areas.

Objective 4.C: Create pedestrian priority corridors that serve as 'walksheds' to direct pedestrians to these safer, convenient paths between key destinations.

The Pedestrian Master Plan includes recommended pedestrian-related physical improvements on corridors throughout the study area. The plan's priority corridors within the study area include

Sunrise Boulevard, Greenback Lane, and Arcadia Drive. The Pedestrian Master Plan also includes "Focus Area Plans" containing in-depth recommendations for improving the pedestrian environment along major commercial corridors, such as the following segments:

- Greenback Lane from Birdcage Street to Fair Oaks Boulevard; and
- Sunrise Boulevard from Madison Avenue to Sayonara Drive.

The Pedestrian Master Plan also includes recommendations related to the deployment of leading pedestrian intervals (LPIs) at certain signalized intersections including at the Greenback Lane/Sunrise Boulevard intersection. This topic, along with an in-depth evaluation of how the recommendations contained in the Pedestrian Master Plan for these corridors compare to the proposed improvements, are discussed later this in section.

3.12.3 IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

This section describes the thresholds or criteria that determine whether the Specific Plan causes a significant impact on the transportation system. These thresholds are based on policies from the City's TIS Guidelines (2020) and prior EIRs published in Citrus Heights.

The Specific Plan would have a significant impact if it would:

Roadway Network

- Not qualify under one of several potential exemption categories (small projects, affordable housing, transit priority, etc.), and its VMT exceeded 85 percent of the regional per capita average.

Pedestrian Network

- Fail to provide accessible and safe pedestrian connections between buildings and to adjacent streets and transit facilities.
- Disrupt existing or planned pedestrian facilities or conflict with adopted City pedestrian plans, guidelines, policies, or standards.
- Add trips to an existing pedestrian facility that does not meet current design standards.

Bicycle Network

- Disrupt existing or planned bicycle facilities or conflict with adopted City bicycle plans, guidelines, policies, or standards.
- Add trips to an existing bicycle facility that does not meet current design standards.

Transit Facilities and Services

- Disrupt existing or planned transit facilities or conflict with adopted City transit plans, guidelines, policies, or standards.

On-Site Circulation

- Include designs for on-site circulation, access, and parking that fail to meet City or industry standard design guidelines.
- Fail to provide adequate accessibility for service and delivery trucks on-site including access to truck loading areas.
- Substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

Emergency Vehicle Response

- Result in inadequate emergency access during construction and/or operation.

Construction-Related Impacts

- Create a temporary but prolonged impact due to lane closures, need for temporary signals, emergency vehicle access, traffic hazards to bikes/pedestrians, damage to roadbed, or truck traffic on roadways not designated as truck routes.

ANALYSIS METHODS

The section discusses the methodologies that are utilized in this section to develop quantitative transportation-related results, including Specific Plan trip generation and VMT estimates. Each of these items is discussed below.

Project Trip Generation

Trip generation estimates were prepared using the Mixed-Use Trip Generation Model (MXD+), which was developed for the US Environmental Protection Agency (EPA) to estimate internal trip-making and external trips made by non-auto travel modes. This model, which was originally developed by consultants and academic researchers based on empirical evidence at 240 mixed-use projects located across the U.S, has been used in numerous EIRs throughout California. The model considers various built environment variables such as land use density, regional location, proximity to transit, and various design variables when calculating the project's internal trips and external trips made by non-auto modes. In Fall 2019, the model underwent a revalidation that confirmed it is still applicable to current (non-COVID) conditions. Refer to Appendix G for the revalidation report. MXD+ begins by estimating gross trips generated by project land uses based on data included in *Trip Generation Manual, 10th Edition* (ITE, 2017). It then estimates internal trips and external trips made by non-auto modes of travel.

VMT Estimates

By definition, one (1) VMT is defined as one mile driven by a vehicle (regardless of the number of occupants). VMT is commonly expressed as a daily value (in miles) for a typical weekday. In simple terms, VMT can be estimated by multiplying the number of new daily project trips by an average trip length. In this section, VMT is reported in two fundamentally different ways as described below:

- **Total Project Land Use VMT Generation** – includes all VMT generated by a given project scenario for which a vehicle trip has an origin or destination at the project site. For example, all VMT associated with trips to/from an on-site residence would be counted, while a trip by that resident from an off-site work location to a coffee shop would not. That "non-home based" trip is not counted due to inherent challenges in accurately estimating that type of behavior and concerns over double-counting VMT.

- **VMT per Capita** – Comparisons are made for existing Residents, Workers, and Visitors in the census block group representing the project site versus the Sacramento regional average. For Residents, all home-based travel is considered. For Workers, home-to-work and work-to-home trips are considered. Visitors represent a more complex evaluation, which is discussed in detail in that part of the analysis.

Total project land use VMT generation begins with the number of new daily vehicle trips generated by the given scenario. Those values are then classified as either residential, office, medical-office, institutional, or retail. For each category, the average trip length is multiplied by the number of new vehicle trips and then summed across all categories. The average trip length is based on average weekday trip lengths throughout 2019 for residents, workers, and visitors who traveled to Census Block Group 60670081391. This block represents Sunrise Mall and other residential/commercial properties between the mall property and Fair Oaks Boulevard. The average trip length represents the entire length of each trip and is not truncated at city or regional boundaries. This data was provided by Streetlight Data, Inc.[4], as part of the City's ongoing SB 743 Implementation Project.

In contrast to the above, VMT per capita simply consists of a comparison of the project site's census block group VMT characteristics against the SACOG regional average. This comparison is consistent with the *Technical Advisory.* The *Technical Advisory* also offers guidance regarding land use projects that are presumed to be less-than-significant under certain conditions. These generally fall into one of several categories such as small projects, projects near transit, affordable housing, redevelopment projects and local serving retail. These topics are discussed in more detail later in this section.

METHODOLOGY

Proposed Specific Plan Land Uses

Four distinct land use scenarios are described below. Table 3.12-4 displays the land uses assumed for the Projected Development Scenario. Note that these uses are necessarily somewhat more detailed than as described in Chapter 2.0, Project Description, (particularly in terms of retail due to the differing travel characteristics of different uses) to facilitate detailed transportation analyses.

[4] Streetlight Data is a third-party vendor who uses anonymous cell phone data to develop a variety of transportation and economic metrics. By tracking a device's location over time, they can assess, for instance, whether it is associated with a resident, worker, or visitor. The movement of the device can then be used to determine trip purpose and trip length. More on this technology is available at: https://www.streetlightdata.com/

TABLE 3.12-4: PROJECTED DEVELOPMENT SCENARIO LAND USE ASSUMPTIONS

LAND USE	*QUANTITY*
Multi-Family Mid-Rise Residential	1,075 Units
Multi-Family Senior Housing	125 Units
Full-Service Hotel	235 Rooms
Limited Service / Extended Stay Hotels	220 Rooms
Retail	297,000 SF consisting of: 8-Screen Movie Theater (61,000 SF) High-Turnover Sit-Down Restaurants (40,000 SF) Quality Restaurants (59,000 SF) Fast-Food Restaurants (10,000 SF) General Retail (127,000 SF)
Office	700,000 SF
Medical-Office	176,000 SF
Other[1]	45,000 SF

NOTES: SF = SQUARE FEET.

[1] ASSUMED TO CONSIST OF 12,000 SQUARE-FOOT DAYCARE CENTER AND 33,000 SQUARE FEET COMMUNITY CENTER TYPE USE.

SOURCE: GENSLER, FEHR & PEERS, 2020.

A total of 5,510 parking spaces would be provided on-site to accommodate the Projected Development Scenario. This includes a variety of parking types ranging from surface parking lots, parking structures, podium parking (i.e., parking beneath residential), and on-street parking within the site (but not on Sunrise Boulevard or Greenback Lane).

As discussed in Chapter 2.0, Project Description, the Maximum Development Allowance by Planning Area is inclusive of all uses, and may not be exceeded without a Specific Plan Amendment. An amendment to the Specific Plan would be required if any of the following occurs:

- Introduction of a new type of land use not specifically discussed in the Specific Plan and not determined by the Community Development Director to be substantially similar in character and impact with a use discussed in the Specific Plan;
- A change to the Specific Plan, that could create new or significantly increase previously identified environmental impacts as determined strictly pursuant to the provisions of Public Resources Code Section 21166;
- Changes that would cause the total development to exceed the maximum allowed in the Planning Area where project is located or the Plan Area overall;
- Any change to the fundamental character of the development including any substantive change to the character of the commercial parcels, residential development, recreation and open space areas, or circulation pattern of the project;
- Implementation of any land use change that would affect compatibility of land uses;
- Significant changes to the plan area circulation pattern that would result in a substantial alteration of any land uses or circulation concepts set forth in this Specific Plan.

An amendment to the Specific Plan is not required for the following:

- Minor changes
- Introduction of a new type of land use that is determined by the Community Development Director to be substantially similar in character and impact with a use discussed in the Specific Plan;
- Changes in the phasing of the Plan Area that do not change the overall balance of providing sufficient infrastructure for the development.

To allow flexibility to respond to changing market conditions over time, the Specific Plan establishes processes for reviewing and approving development proposals with minor changes to development allowance by land use or development standards that otherwise comply with the overall intent and purpose of the Specific Plan. As long as the overall buildout is at or below the maximum development assumptions shown below, the transportation-related impacts disclosed in this environmental document would not increase.

Due to the nature of the proposed Specific Plan land uses and buildout phasing, and in order to facilitate detailed transportation analyses, three maximum development scenarios were analyzed.

Table 3.12-5 displays the land uses associated with the following three maximum development scenarios: (1) Scenario A – Maximum Residential; (2) Scenario B – Maximum Office; and (3) Scenario C – Maximum Institutional. These scenarios were developed to illustrate how the flexibility of uses within the site could affect various transportation metrics.

TABLE 3.12-5: MAXIMUM DEVELOPMENT SCENARIOS LAND USE ASSUMPTIONS

LAND USE	*SCENARIO A (MAXIMUM RESIDENTIAL)*	*SCENARIO B (MAXIMUM OFFICE)*	*SCENARIO C (MAXIMUM INSTITUTIONAL)*
Multi-Family Mid-Rise Residential	2,095 Units	1,410 Units	1,546 Units
Multi-Family Senior Housing	125 Units	125 Units	125 Units
Full-Service Hotel	240 Rooms	240 Rooms	240 Rooms
Limited Service / Extended Stay Hotels	120 Rooms	240 Rooms	240 Rooms
Retail	320,000 SF consisting of: - 8-Screen Movie Theater (61,000 SF) - High-Turnover Sit-Down Restaurants (40,000 SF) - Quality Restaurants (59,000 SF) - Fast-Food Restaurants (10,000 SF) - General Retail (150,000 SF)	320,000 SF consisting of: - 8-Screen Movie Theater (61,000 SF) - High-Turnover Sit-Down Restaurants (40,000 SF) - Quality Restaurants (59,000 SF) - Fast-Food Restaurants (10,000 SF) - General Retail (150,000 SF)	280,000 SF consisting of: - 8-Screen Movie Theater (61,000 SF) - High-Turnover Sit-Down Restaurants (40,000 SF) - Quality Restaurants (59,000 SF) - Fast-Food Restaurants (10,000 SF) - General Retail (110,000 SF)
Office	361,000 SF	960,000 SF	500,000 SF
Medical Center	-	-	450,000 SF[1]
Other[2]	70,000 SF	85,900 SF	-

NOTES: SF = SQUARE FEET.

[1] ASSUMED TO CONSIST OF 75% HOSPITAL AND 25% MEDICAL-OFFICE SPACE BASED ON SIMILAR RATIOS ELSEWHERE IN THE REGION.

[2] ASSUMED TO CONSIST OF 12,000-SQUARE FOOT DAYCARE CENTER WITH BALANCE BEING A COMMUNITY CENTER USE.

Project Access, On-Site Circulation, and Transit

Figure 3.12-4 shows the proposed land use plan. Figure 3.12-5 displays the proposed internal street network. Figure 3.12-6 displays the proposed vehicular access to the Plan Area from Sunrise Boulevard and Greenback Lane. A description of the proposed circulation system is provided below.

ON-SITE VEHICULAR CIRCULATION

- **Primary Street A** would extend easterly into the Plan Area from Sunrise Boulevard opposite the Birdcage Center signalized driveway. This street would terminate at Parkway A and would be the northern terminus of the north-south Main Street within the central part of the plan. Primary Street A would also provide direct access to multiple parking structures and surface parking.
- **Primary Street B** would extend easterly into the site from Sunrise Boulevard from a new signalized intersection (see detailed description below). This street would terminate at the north-south Main Street. Primary Street B would provide access to nearby parking structures and surface parking.
- **Primary Street C** would extend easterly into the site from Sunrise Boulevard from an existing unsignalized driveway. This street would terminate at Parkway A and be the southern terminus of the north-south Main Street. Primary Street C would also provide direct access to a large parking structure and surface parking.
- **Parkway A** would extend southerly into the site from Greenback Lane opposite Arcadia Drive. This parkway would provide direct access to multiple parking structures and residential uses situated in the east portion of the site. Parkway A would terminate at Parkway B.
- **Parkway B** would extend easterly into the site from Sunrise Boulevard opposite Macy Plaza Drive. This parkway would primarily serve the residential uses in the southern and eastern parts of the site, and would terminate at Parkway B.

A series of secondary streets would provide north-south and east-west connectivity within the Plan Area. Some streets may have on-street parking, while others may include on-street bicycle facilities. All streets would be privately owned and maintained. As part of the signal improvements, all signalized project accesses would operate with eight-phase signal phasing, whereby side-street left-turns would operate simultaneously. This is more efficient than current split phasing at these intersections.

VEHICULAR ACCESS FROM PUBLIC STREETS

The Specific Plan proposes the same vehicular access as currently occurs within the site, with the following exceptions:

- The existing driveway (to be renamed Primary Street B) situated on Sunrise Boulevard nearly equidistant from the Birdcage Center/Sunrise Mall and Macy Plaza Drive signalized intersections would be signalized. These three signals would each be spaced about 870 feet apart.

- The existing driveway on Sunrise Boulevard situated 440 feet south of the Birdcage Center/Sunrise Mall signalized intersection would be removed to support construction of the transit center (see description below).
- A new right-turn only driveway would be constructed on Greenback Lane approximately 375 feet east of Sunrise Boulevard and 250 feet west of the existing unsignalized driveway (known as Entry E) that would remain. This new driveway would be a secondary access.

Later in this section, a detailed evaluation of vehicular access needs to all project access points located on Sunrise Boulevard and Greenback Lane is provided.

ACTIVE TRANSPORTATION

Figure 3.12-7 shows the proposed on-site bicycle and pedestrian system. As shown, the "Green Loop Multi-Use Trail" would be situated along the Plan Area's frontages on Greenback Lane and Sunrise Boulevard (with the exception of the transit center frontage where it would be more internal to the site). This 14-foot-wide facility would provide a continuous, protected bike and walking path connecting proposed land uses and the surrounding area.

Sidewalks would be plentiful throughout the Plan Area. As discussed in more detail in the impact discussions, the number of signalized crosswalks at the site accesses on Sunrise Boulevard and Greenback Lane would be increased to facilitate pedestrian travel between adjacent uses.

TRANSIT

Future development of the Plan Area would include construction of a transit center that would be strategically located along Sunrise Boulevard near the Sunrise Commons Park Area. Refer to Figure 3.12-8 for transit center conceptual layout. In the near-term, the transit center would accommodate continued fixed-route bus service (Route 21 along Sunrise Boulevard), as well as provide opportunities for an improved end-of-line terminus/staging area for Routes 1 and 23 (which currently terminate on Arcadia Drive). In the longer term, this station is envisioned as a critical stop along a future BRT line on the Sunrise Boulevard and/or Greenback Lane corridors. It is noted that Sacramento RT is in the planning stages for routes along key economic corridors.

In June and October 2020, discussions were held between the City, Sacramento RT, and the Sunrise Tomorrow consulting team regarding the conceptual transit center design. This led to a variety of design improvements that are now incorporated into the current design. Although the design is still conceptual, it represents the primary components of the system upon which future engineering designs should be based.

The following discussion describes how northbound and southbound buses on Sunrise Boulevard would access the transit center. Please note that additional bus operations enhancements are evaluated in the impact discussion.

Northbound Bus Travel: Northbound buses on Sunrise Boulevard would stop in a bus turnout lane located directly north of the new signal (at Primary Street B). The pullout area would be of sufficient length (i.e., at least 150 feet) to accommodate two simultaneous buses. Buses would have ample

opportunities to merge into the northbound lanes by virtue of gaps in traffic provided by the signal immediately to the south.

The new northbound bus stop would replace the existing stop located in the same location. Depending on the type of bus service that is provided in the future, the existing stops along the project frontage 860 feet to the north and 800 feet to the south may or may not be maintained.

Southbound Bus Travel: Southbound buses on Sunrise Boulevard would turn left at the Birdcage Drive/Primary Street A signalized intersection to enter a southbound-only bus-only lane that would parallel Sunrise Boulevard between Primary Streets A and B. Passengers would board and align at a pullout located in the general vicinity of the northbound loading zone (to minimize walking distance). Buses would then continue to the new signalized Primary Street B intersection to either turn left or right onto northbound or southbound Sunrise Boulevard.

Key elements of the conceptual bus-only lane include a 12-foot travel lane with adequate horizontal curvature and curb return radii to accommodate a 40-foot bus. Where buses would load/unload passengers, 22 feet of width would be provided to enable buses to pass one another. During design discussions with Sacramento RT, the agency made specific reference to the use of concrete (versus asphalt) as a means to keep the facility in good operational condition for a longer period of time. Additionally, they emphasized the need to carefully consider pedestrian travel, both between the transit center and the rest of the Plan Area, and between the transit center and crosswalks across Sunrise Boulevard.

The Specific Plan would include construction of a bus stop/pullout lane on eastbound Greenback Lane directly east of Sunrise Boulevard. A new bus stop would also be added on eastbound Greenback Lane east of Arcadia Drive. These improvements are important because Routes 1 and 23, which operate along Greenback Lane, do not currently feature stops along the Plan Area frontage.

Project Trip Generation and Distribution

Table 3.12-6 displays the trip generation of the Projected Development Scenario during the weekday AM and PM peak hours and on a daily basis. For analysis purposes, no additional reductions were assumed for project transit use. This approach was taken for several reasons. First, ITE data already considers a modest amount of travel being made by transit based on the data collected to develop the trip rates. Second, traffic counts conducted by Fehr & Peers in 2014 at the Quail Point Shopping Center (located in the southwest corner of Sunrise Boulevard/Madison Avenue) revealed vehicle trip generation rates that were within one percent of ITE estimates (with less than two percent mode split to an adjacent bus stop). Hence, ITE rates were demonstrated to accurately estimate the trips generated by a large retail center situated less than one mile from the project site. Third, the BRT line is not a programmed/funded project, so it would be unreasonable to assume it would be in place, for analysis purposes. Accordingly, this approach provides a reasonably, but not overly, conservative assessment of the Specific Plan's site access needs and VMT.

The MXD model estimated that about 11 percent of trips on a daily basis would be internal. Internalization increased to 18 to 20 percent during the AM and PM peak hours, which makes sense

given the large amount of office space that has a greater likelihood of internal trip-making during the beginning and end of the workday (though some internal trips may also occur at lunch). External trips made by walking and bicycling were in the five to six percent range, which is reasonable given the amount and diversity of nearby land uses.

Table 3.12-6 considers that some retail trips would be "pass-by" from the adjacent Sunrise Boulevard or Greenback Lane corridors. Pass-by trips do not add new traffic to the adjacent roadway, but they do represent added trips entering/exiting the project site. Pass-by reductions were taken based on the *Trip Generation Handbook, 3rd Edition* (ITE, 2017). After accounting for internal trips, external non-auto trips, and pass-by trips, the Projected Development Scenario is estimated to generate 34,610 new daily vehicle trips, with 1,962 occurring during the AM peak hour and 2,573 occurring during the PM peak hour. These represent the total trips generated by the site without any adjustments for the removal of existing Sunrise Mall trips (described later).

TABLE 3.12-10: TRIP GENERATION COMPARISON FOR PROJECT SCENARIOS

SCENARIO	DAILY TRIPS		AM PEAK HOUR		PM PEAK HOUR	
	GROSS VEHICLE TRIPS [1]	NEW VEHICLE TRIPS [2]	GROSS VEHICLE TRIPS [1]	NEW VEHICLE TRIPS [2]	GROSS VEHICLE TRIPS [1]	NEW VEHICLE TRIPS [2]
PROJECT TRIPS ONLY						
Projected Development Scenario	39,325	34,610	2,217	1,962	3,143	2,573
Scenario A – Maximum Residential	35,382	30,709	1,881	1,638	2,661	2,111
Scenario B – Maximum Office	38,854	34,057	2,261	2,007	3,059	2,482
Scenario C – Maximum Institutional	37,815	33,256	2,294	2,041	3,058	2,509
EXISTING SUNRISE MALL TRIPS (TO BE REMOVED)						
Sunrise Mall (Fall 2019)	-10,626	-9,165	-276	-229	-1,031	-681
NET INCREASE IN TRIPS						
Projected Development Scenario	28,699	25,445	1,941	1,733	2,112	1,892
Scenario A – Maximum Residential	24,756	21,544	1,605	1,409	1,630	1,430
Scenario B – Maximum Office	28,228	24,892	1,985	1,778	2,028	1,801
Scenario C – Maximum Institutional	27,189	24,091	2,018	1,812	2,027	1,828

NOTES:

[1] GROSS VEHICLE TRIPS REPRESENT ALL VEHICLE TRIPS THAT ENTER/EXIT THE PROJECT SITE (INCLUDING BOTH NEW AND PASS-BY TRIPS).

[2] NEW VEHICLE TRIPS REPRESENT NEW VEHICLE TRIPS ADDED TO THE SURROUNDING ROADWAY SYSTEM THAT ENTER/EXIT THE PROJECT SITE.

SOURCE: FEHR & PEERS, 2020.

The following key findings are derived from Table 3.12-10:

- Scenario A (Maximum Residential) is the least impactful (among the four scenarios) in terms of number of new trips being added.
- The Projected Development Scenario, Scenario B (Maximum Office) and Scenario C (Maximum Institutional) would have comparable vehicular access needs based on the number of gross vehicle trips (i.e., including both new and pass-by trips) they would generate during peak hours.

Table 3.12-10 also shows the number of existing Sunrise Mall trips that would be removed as a result of construction of any of these scenarios. After accounting for those eliminated trips, the Projected Development Scenario would add a net increase of approximately 1,733 new AM peak hour and 1,892 new PM peak hour trips to the surrounding roadway network.

Full occupancy/operations of Sunrise Mall (i.e., 1,163,000 square feet, or 1,163 thousand square feet [KSF] occupied square feet of retail) is estimated to generate 31,900 gross vehicle trips with 730 occurring during the AM peak hour and 3,340 occurring during the PM peak hour. After accounting for the effects of pass-by traffic, full occupancy would generate about 26,500 new trips with 610 occurring during the AM peak hour and 2,200 occurring during the PM peak hour. This data is derived using trip generation rates published in the *Trip Generation Manual* (ITE, 2017). This finding is important because it reveals the following conclusions:

- The Projected Development Scenario would result in about 220 percent more new AM peak hour trips and 17 percent more new PM peak hour trips when compared to Sunrise Mall full occupancy/operations.
- Hence, when compared to conditions when Sunrise Mall was operating at/near capacity (i.e., late 1990s and early 2000s), traffic conditions surrounding the property can be expected to be much busier during the AM peak hour and modestly busier during the PM peak hour.

Figure 3.12-9 displays the expected distribution of new trips generated by buildout of the Specific Plan. Separate distribution percentages are shown for residential, retail, and office/institutional. The residential percentages are derived from the *Mitchell Farms EIR Final Transportation Impact Study* (Fehr & Peers, 2018). The retail distribution percentages are derived from existing peak hour turning movements measured in Fall 2019 at the Sunrise Mall project accesses. The office/institutional percentages are similar to retail, but with a slightly greater orientation toward I-80 via Greenback Lane due to the longer distance travel characteristics of commute trips.

Parking

Table 3.12-11 displays the expected parking needs of the Projected Development Scenario. It begins by estimating each land use's individual peak parking demand from the *Parking Generation Manual* (ITE, 2019)[5]. From there, the shared parking spreadsheet contained in *Shared Parking* (ULI, NPA, ICSC, 2020) is used to determine the site's overall peak parking demand for the peak month during both a weekday and weekend. This is calculated by considering each use's relative parking demand over the course of the day, the relative demand over the course of the year, and captive parking adjustments (e.g., occupants of a vehicle that park and visit two sites, or an employee parked at the site who visits a restaurant during lunch hour).

TABLE 3.12-11: PARKING RATIOS FOR PROJECTED DEVELOPMENT SCENARIO

SCENARIO	WEEKDAY		WEEKEND	
	MAXIMUM PARKING RATIO	PEAK PERIOD OF PERIOD	MAXIMUM PARKING RATIO	PEAK PERIOD OF PERIOD
Without any Shared Parking Adjustments[1]	7,688 spaces	-	5,620 spaces	-
With Shared Parking Adjustments[2]	5,355 spaces	11 AM	3,860 spaces	8 PM
Percent Reduction	30%		31%	

NOTES:

[1] BASED ON PARKING DEMAND RATIOS PER SHARED PARKING (ULI, NPA, ICSC, 2020), WHICH ARE DERIVED FROM THE PARKING GENERATION MANUAL (ITE, 2019). TIME PERIOD NOT SHOWN BECAUSE MAXIMUM PEAK PARKING DEMAND TIME PERIOD DIFFERS BY LAND USE TYPE.

[2] BASED ON OUTPUT FROM SHARED PARKING SPREADSHEET. REFER TO ABOVE TEXT FOR DESCRIPTION OF PARKING ADJUSTMENTS. PAGE 19 OF SHARED PARKING SPECIFIES THAT AN EFFECTIVE PARKING SUPPLY FACTOR SHOULD NOT BE ADDED TO THIS PARKING RATIO. THIS "JUST ENOUGH" PARKING REPRESENTS THE NUMBER OF SPACES THAT WOULD BE ADEQUATE FOR PEAK PARKING ACCUMULATION ON A DESIGN DAY.

SOURCE: FEHR & PEERS, 2020.

5 The 85th percentile parking demand values from the *Parking Generation Manual* are used as a starting point. These values correspond to 85th percentile of the individual study site peak parking accumulations for a given land use type.

This table indicates the peak parking accumulation would occur at 11 AM on a weekday in May, with 5,355 spaces occupied (see Appendix G for additional information such as temporal parking demand). This result makes sense because this hour is amongst the busiest for the office/medical-office space as well as having moderate demand for retail and restaurants. This value is considered by *Shared Parking* to be the recommended parking supply (i.e., not necessary to add an additional 5-15 percent to account for effective parking supply). Thus, the proposed supply of 5,510 spaces for the Projected Development Scenario is three percent greater than the maximum parking ratio (i.e., recommended supply) of 5,355 spaces from the *Shared Parking* spreadsheet.

Average Daily Traffic Volumes

Table 3.12-12 displays the ADT on portions of Sunrise Boulevard and Greenback Lane under existing conditions plus the Projected Development Scenario. These forecasts were derived by multiplying the trip distribution percentages on Figure 3.12-9 for each major land use type by the number of project trips (as shown in Table 3.12-6 and also accounting for trips removed from existing Sunrise Mall). As shown, Greenback Lane west of Sunrise Boulevard and Sunrise Boulevard south of Macy Plaza Drive would each experience an increase of about 7,000 daily trips.

TABLE 3.12-12: EXISTING PLUS PROJECTED DEVELOPMENT SCENARIO AVERAGE DAILY TRAFFIC (ADT) VOLUMES

#	STREET	SEGMENT	NUMBER OF LANES	ADT [1]	
				EXISTING CONDITIONS	EXISTING PLUS PROJECT CONDITIONS [2]
1	Greenback Lane	Between Sunrise Blvd and San Juan Avenue	6	47,900	54,900
2	Greenback Lane	Between Sunrise Blvd and Fair Oaks Boulevard	6	35,000	38,300
3	Sunrise Boulevard	Between Arcadia Drive and Woodmore Oaks	6	40,500	47,000
4	Sunrise Boulevard	North of Macy Plaza Drive	6	38,300	43,100
5	Sunrise Boulevard	South of Macy Plaza Drive	6	40,500	47,600

NOTES:

[1] VOLUMES INCLUDE BOTH DIRECTIONS OF TRAVEL AND ARE ROUNDED TO THE NEAREST HUNDRED VEHICLES.

[2] VOLUMES REPRESENT THE ADDITION OF NEW PROJECT TRIPS FROM TABLE 3.12-6 ASSIGNED TO STUDY ROADWAYS PER THE TRIP DISTRIBUTION PERCENTAGES SHOWN IN FIGURE 3.12-9 ADDED TO THE EXISTING VOLUME.

SOURCE: FEHR & PEERS, 2020.

Table 3.12-13 displays the ADT on portions of Sunrise Boulevard and Greenback Lane under cumulative conditions, without and with the Projected Development Scenario. The cumulative no project forecasts are derived from the *Mitchell Farms EIR Final Transportation Impact Study* (Fehr & Peers, 2018). These forecasts represent a 20 to 27 percent increase in traffic growth on Sunrise Boulevard and Greenback Lane.

TABLE 3.12-13: CUMULATIVE PLUS PROJECTED DEVELOPMENT SCENARIO AVERAGE DAILY TRAFFIC (ADT) VOLUMES

#	STREET	SEGMENT	NUMBER OF LANES	ADT [1]	
				CUMULATIVE NO PROJECT CONDITIONS	CUMULATIVE PLUS PROJECT CONDITIONS
1	Greenback Lane	Between Sunrise Blvd and San Juan Avenue	6	57,900	64,900
2	Greenback Lane	Between Sunrise Blvd and Fair Oaks Boulevard	6	43,200	46,500
3	Sunrise Boulevard	Between Arcadia Drive and Woodmore Oaks	6	48,800	55,000
4	Sunrise Boulevard	North of Macy Plaza Drive	6	48,700	53,500
5	Sunrise Boulevard	South of Macy Plaza Drive	6	48,900	56,000

NOTES:

[1] VOLUMES INCLUDE BOTH DIRECTIONS OF TRAVEL AND ARE ROUNDED TO THE NEAREST HUNDRED VEHICLES.

SOURCE: FEHR & PEERS, 2020.

The cumulative forecasts consider reasonably foreseeable land use developments such as the Mitchell Farms Residential project located north of Arcadia Drive between Sunrise Boulevard and Fair Oaks Boulevard. It also considers increases in background travel conditions associated with growth in adjacent jurisdictions such as Roseville, unincorporated Sacramento County, Folsom, and Rancho Cordova. The cumulative plus project forecasts were derived in the same manner as described previously for existing plus project conditions.

VMT Estimates

Tables 3.12-14 through 3.12-17 display the VMT generated by the Projected Development Scenario and the three maximum development scenarios, respectively. This data is presented for information purposes here. It is not used in any successive VMT analyses, though it is used as inputs in other part of the Draft EIR (e.g., greenhouse gases, energy, etc.). Instead, an alternate approach described on the following pages is used per guidance from OPR's *Technical Advisory*.

TABLE 3.12-14: ESTIMATED VMT – PROJECTED DEVELOPMENT SCENARIO

LAND USE [1]	NUMBER OF NEW DAILY TRIPS [2]	AVERAGE TRIP LENGTH [3]	VMT [4]
Residential	5,282	8.0	42,256
Retail	17,082	7.5	128,115
Professional Office	5,864	8.3	48,671
Medical-Office	5,586	7.8	43,571
Institutional	796	7.8	6,209
Sub-Total	34,610		268,822
Existing Sunrise Mall	-9,165	7.5	-68,738
Net Increase	*25,445*		*200,084*

NOTES:

[3] BASED ON DATA FROM STREETLIGHT DATA, INC, FOR CENSUS BLOCK GROUP REPRESENTING PROJECT SITE. AVERAGE TRIP LENGTHS ARE 8.0 MILES FOR RESIDENTS, 8.3 MILES FOR EMPLOYEES, AND 7.5 MILES FOR VISITORS. RETAIL ASSUMED TO CONSIST OF 95% CUSTOMER/VISITOR TRIPS AND 5% EMPLOYEE TRIPS. OFFICE ASSUMED TO CONSIST OF 95% EMPLOYEE TRIPS AND 5% VISITOR TRIPS. MEDICAL-OFFICE AND INSTITUTIONAL ASSUMED TO CONSIST OF 40% EMPLOYEE TRIPS AND 60% VISITOR TRIPS
SOURCE: FEHR & PEERS, 2020.

Tables 3.12-14 through 3.12-17 reveal the following:

- Scenario A (Maximum Residential) would generate the lowest total VMT among the four scenarios, while Scenario C (Maximum Institutional) would generate the second lowest VMT.
- The Projected Development Scenario and Scenario B (Maximum Office) would generate the largest and comparable amounts of VMT.

Pedestrian, Bicycle, and Transit Facility Improvements

This section compares how the proposed Specific Plan improvements compare to the recommended improvements for the Greenback Lane and Sunrise Boulevard corridors along the Plan Area frontage from the *Pedestrian Master Plan.* This comparison is shown in Table 3.12-18 and indicates that the proposed Specific Plan improvements exceed (in terms of both traveler comfort and capacity) what was contemplated in the *Pedestrian Master Plan*.

The City's *Bikeway Master Plan* includes proposed Class II (on-street) bike lanes along the Plan Area frontage. In lieu of this improvement, the Specific Plan would construct the multi-use Green Loop Class I path that would extend along the entirety of the Plan Area frontage parallel to these corridors.

TABLE 3.12-18: COMPARISON OF PEDESTRIAN AND TRANSIT IMPROVEMENTS BETWEEN CITY OF CITRUS HEIGHTS PEDESTRIAN MASTER PLAN AND PROPOSED PROJECT

SEGMENT	*PEDESTRIAN IMPROVEMENTS* [1]		*TRANSIT IMPROVEMENTS* [1]	
	PEDESTRIAN MASTER PLAN	*PROPOSED PROJECT*	*PEDESTRIAN MASTER PLAN*	*PROPOSED PROJECT*
Greenback Lane east of Sunrise Boulevard	• 8-foot sidewalk	• 14-foot bike/ pedestrian trail • Multiple sidewalks extending into project	• Bus Stop/ Pullout west of Arcadia Drive	• Bus Stop/Pullout directly east of Sunrise Boulevard and directly east of Arcadia Drive
Sunrise Boulevard from Greenback Lane to Birdcage Center/Primary Street A	• 8-foot sidewalk • Sidewalks extending into Sunrise Mall • Evaluate adding second crosswalk at Birdcage signal	• 14-foot bike/ pedestrian trail • Multiple sidewalks extending into project • Crosswalk added at Birdcage signal	• Bus Stop/ Pullout north of Birdcage Drive	• Transit Center between Birdcage Center and new signal, featuring northbound pullout and southbound transit-only lane within site, and pedestrian plaza
Sunrise Boulevard from Birdcage Center/Primary Street A to Macy Plaza Drive/ Parkway B	• 8-foot sidewalk • Sidewalks extending into Sunrise Mall • Evaluate adding second crosswalk at Macy Plaza signal	• 14-foot bike/ pedestrian trail • Multiple sidewalks extending into project • Crosswalk added at Macy Plaza signal	• Bus Stop/ Pullout north of Macy Plaza Drive	

NOTE:
[1] EVALUATION IS PERFORMED FOR PORTION OF BOTH CORRIDORS DIRECTLY ALONG THE PROJECT FRONTAGE.
SOURCE: FEHR & PEERS, 2020.

IMPACTS AND MITIGATION MEASURES

Impact 3.12-1: Specific Plan implementation would not cause a significant impact to the roadway network based on its transit accessible and VMT efficient location (Less Than Significant)

Pages 13 to 14 of the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (OPR, 2018) indicate that proposed land use projects located within ½ mile of an existing stop along a "high-quality transit corridor" are presumed to have a less than significant impact unless the project:

1. Has a floor-to-area ratio (FAR) of less than 0.75;
2. Includes more parking for uses by residents, customers, or employees than is required by the jurisdiction;
3. Is inconsistent with the applicable Sustainable Communities Strategy (SCS);
4. Replaces affordable housing.

The *Technical Advisory* recommends that if any of above exceptions apply, a detailed VMT analysis should be performed to determine whether the project would exceed the applicable VMT threshold.

According to Public Resources Code 21155, a high-quality transit corridor means fixed route bus service with service intervals of 15 minutes or less during peak commute hours. Table 3.12-3 indicates that three different bus routes, which operate on 15- or 30-minute headways during peak

commute periods currently stop along the Plan Area. Because these routes feature multiple stops along both Sunrise Boulevard and Greenback Lane, all proposed land uses would be located less than a ½ mile walk of a bus stop. Thus, the Plan Area qualifies as being within ½ mile of a high-quality transit corridor. The planned construction of a transit center within the site along Sunrise Boulevard only accentuates that conclusion.

The following evaluates how the Specific Plan would compare against the above four potential exceptions to a presumed less-than-significant impact:

1. **Has a floor-to-area ratio (FAR) of less than 0.75** – The Projected Development Scenario would yield approximately 2.9 million total square feet of developed space over 74 developable acres (excluding public/private streets), yielding an FAR of 0.90. The maximum development scenarios would yield FARs of 1.0.
2. **Includes more parking for uses by residents, customers, or employees than required by the jurisdiction** – As indicated in Table 3.12-11, the Specific Plan proposes over 30 percent less parking than typical suburban parking ratios would require. This reduction is driven by the mixed-use, complementary nature of the Plan's land uses. Thus, the Specific Plan would not provide more parking than is required by City code.
3. **Is inconsistent with the applicable Sustainable Communities Strategy (SCS)** – As noted previously, the SACOG 2020 MTP/SCS had identified the redevelopment of Sunrise Mall as an opportunity to encourage infill development in Citrus Heights. However, based on the land use growth anticipated for the City in the MTP/SCS by 2040, it is apparent that the MTP/SCS did not contemplate the proposed levels of development being contemplated as part of the proposed Specific Plan.
4. **Replaces affordable housing** – The Specific Plan would not replace any existing or planned affordable housing on the site.

In April 2021, the City adopted its SB 743 Implementation Plan. Although this is City-wide in nature, it does require investigation of VMT patterns at a local scale. Thus, the analyses that follow focus on the Plan Area, which is situated in Census Block Group 60670081391 (bounded by Sunrise Boulevard, Greenback Lane, Fair Oaks Boulevard, and Kingswood Drive). As part of the SB 743 Implementation Plan, a citywide database of anonymous VMT data for residents, workers, and visitors was obtained from Streetlight Data, a big data vendor. For the Specific Plan Area's census block group, the following data was obtained:

- Persons residing in this census block group generate 13.5 VMT per capita (home-based only);
- Persons employed in this census block group generate 12.9 VMT per capita (home-to-work).

Pages 15 to 16 of the *Technical Advisory* specify that residential and employment projects may be evaluated against a regional average on a VMT per capita basis. The Streetlight Data revealed that the SACOG six-county region has an average VMT per resident of 20.1 miles and an average VMT per worker of 18.1 miles. These regional values lead to the following important conclusions:

- For residential uses, buildout of the Plan Area would be 33 percent below the regional average, as expressed on a VMT per resident basis.
- For employment uses, buildout of the Plan Area would be 29 percent below the regional average, as expressed on a VMT per employee basis.
- For visitors, which are a surrogate for visitation to retail/entertainment uses, visitors to this census block group generate VMT at a level that is 37 percent below the SACOG region average.

TheSB743 Implementation Plan calls for slightly modified criteria (relative to those four listed on the previous page) for land uses proposed within transit priority areas. This is necessitated by specific conditions within the City. Given the City's built-out nature, most infill projects along key transit corridors are small in size, making achievement of a 0.75 FAR unrealistic. Additionally, specific assumptions for those parcels may not have been made or known as part of the MTP/SCS given their small size. Thus, the draft plan would require proposed projects being considered within a transit priority area to consist of transit supportive land uses (e.g., office, high-density residential), provide no more than 20 percent above the city parking code requirement (consistent with Table 3-7 of the City's Municipal Code) for projects that can demonstrate that such a parking supply is needed, and to not replace affordable housing. The proposed project would comply with each of these standards and therefore would be found consistent with these criteria.

In summary, this evaluation determined that the Plan Area is situated within ½ mile of a high quality transit corridor. The Plan meets three of the four criteria required per the *Technical Advisory* to yield a presumed less-than-significant VMT impact based on this proximity alone. However, because the proposed Specific Plan was not contemplated in the SACOG 2020 MTP/SCS (and could not have been since that document was adopted before the Specific Plan's inception), the above VMT analysis was performed and determined that the Specific Plan would be substantially more VMT efficient than the SACOG regional average, far exceeding the OPR *Technical Advisory* recommendation of being at least 15 percent below the regional average. Therefore, for all of the above reasons, this impact is ***less than significant***.

Impact 3.12-2: Specific Plan implementation could disrupt existing pedestrian facilities or conflict with adopted City pedestrian plans, guidelines, policies, or standards (Less than Significant with Mitigation)

The proposed Specific Plan would substantially improve pedestrian travel in the vicinity of the Plan Area over current conditions. As documented in Table 3.12-18, the Plan would provide pedestrian facilities along the Plan Area frontages that exceed what is recommended in the City's Pedestrian Master Plan. The Specific Plan would provide pedestrian connections between buildings and to adjacent streets and transit facilities. Additionally, review of the Specific Plan against applicable General Plan and Pedestrian Master Plan policies did not yield any inconsistencies.

The Specific Plan would increase pedestrian travel at intersections along Sunrise Boulevard and Greenback Lane. Some of these locations do not include crosswalks or pedestrian signal heads for travel along Sunrise Boulevard. The Specific Plan would add pedestrians to the east leg of the Sunrise Boulevard/Greenback Lane intersection, which is known to have conflicts involving pedestrians in the crosswalk and northbound right-turning vehicles. For these reasons, impacts to pedestrian facilities are considered potentially significant.

Part (a) of Mitigation Measure 3.12-1 would enable pedestrians to enter the east and south leg crosswalks at the Sunrise/Greenback intersection, several seconds prior to the northbound right-turn movement turning green. This would enhance the visibility of pedestrians in the crosswalk. This specific improvement was identified in the City's Pedestrian Master Plan at this intersection. Also, by creating a separate signal phase for the right-turn movement, the northbound and eastbound through movements would not be stopped during the time in which the LPI is activated, thereby avoiding added delays to this movement. Additionally, Part (b) of Mitigation Measure 3.12-1 would enable pedestrians to cross Sunrise Boulevard and Greenback Lane with greater ease.

With implementation of Mitigation Measure 3.12-1, this impact would be ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-1: *The project applicant(s) shall construct specific frontage improvements and make pro rata financial contributions to fund off-site infrastructure improvements in accordance with the Sunrise Tomorrow Transportation Financing and Implementation Plan adopted by the City of Citrus Heights. Key elements of this plan include the following:*

- *Requires individual planning area owners/applicants to construct specific, identified improvements along their frontages of Sunrise Boulevard and/or Greenback Lane with completion required prior to issuing certificate of occupancy permits.*
- *Requires that pro rata funding contributions be made by planning area owners/applicants to certain off-site improvements that are required to accommodate the growth in traffic at the site prior to issuing a building permit. Construction of these off-site improvements will be led by the City of Citrus Heights.*

Specific Improvements include the following:

a. *Install a Leading Pedestrian Interval (LPI) on the east and south leg crosswalks at the Sunrise Boulevard/Greenback Lane intersection and separate northbound and eastbound right-turn signal phases (to allow the LPI to run concurrently with through traffic).*

b. *New/modified traffic signals on Sunrise Boulevard at Birdcage Center/Primary Street A, Primary Street B, Macy Plaza Drive/Parkway B, and on Greenback Lane at Arcadia Drive/Parkway A shall include the following pedestrian amenities in the signal designs:*
    i. *Each intersection shall have two crosswalks across the arterial.*
    ii. *All crosswalks shall have pedestrian signal heads with flashing DON'T WALK interval countdowns.*
    iii. *All crosswalks shall have push-button pedestrian-activation.*

iv. All quadrants of each intersection shall be designed to current ADA standards (i.e., ramps, curbs, signal equipment, etc.).

Impact 3.12-3: Specific Plan implementation could disrupt existing bicycle facilities or conflict with adopted City bicycle network plans, guidelines, policies, or standards (Less than Significant with Mitigation)

The proposed Specific Plan would substantially improve bicycle travel in the site vicinity over current conditions. Additionally, it would improve bicycling conditions relative to recommendations in the City's Bikeway Master Plan. The Specific Plan would include a continuous Green Loop Class I path along Sunrise Boulevard and Greenback Lane. This is generally considered a more desirable biking environment than the alternative of an on-street Class II bike lane, which positions the bicyclist adjacent to a heavily-traveled, high-speed travel lane. Additionally, review of the Specific Plan against applicable General Plan and Bicycle Master Plan policies determined that the proposed improvements would meet or exceed the facility types and designs contemplated in the Bikeway and Pedestrian Master Plans. Lastly, the project would not add bike trips to an existing bicycle facility that does not meet current design standards.

Buildout of the Plan Area would increase bicycle travel at intersections along Sunrise Boulevard and Greenback Lane. Dedicated or shared facilities for bicyclists entering/exiting the Plan Area from these signalized locations are not shown on the site plan. Signal equipment present at each signalized intersection is not currently able to detect the presence of bicycles. Additionally, the precise configuration of the crossing of the Green Loop multiuse trail at each signalized intersection has not been developed. For these reasons, impacts to bicycle facilities are considered potentially significant.

Part (a) of Mitigation Measure 3.12-2 would enable bicyclists to enter/exit the Plan Area more easily. Part (b) of Mitigation Measure 3.12-2 would reduce conflicts between entering/exiting vehicles and bicyclists/pedestrians using the Green Loop by placing it adjacent to the arterial street, which improves visibility and better meets driver expectations versus a mid-block crossing within the site.

With implementation of Mitigation Measure 3.12-2, this impact would be ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-2: *Prior to issuing certificate of occupancy permits, the individual planning area owners/applicants shall implement the following improvements in accordance with the Sunrise Tomorrow Transportation Financing and Implementation Plan adopted by the City of Citrus Heights:*

a. Develop and construct suitable signal designs (e.g., on-street bike lane, bike box, shared bike/travel lane, etc.) at each signalized project access intersection to detect and accommodate bicyclists.
b. At the modified traffic signals on Sunrise Boulevard at Macy Plaza Drive/Parkway B, and on Greenback Lane at Arcadia Drive/Parkway A, design and construct the Green Loop multi-use trail to cross each project street in a manner similar to a standard crosswalk.

Impact 3.12-4: Specific Plan implementation could disrupt existing transit facilities or services or conflict with adopted City transit plans, guidelines, policies, or standards (Less than Significant with Mitigation)

The proposed Specific Plan would substantially improve transit facilities in the site vicinity over current conditions. The Specific Plan includes construction of a transit center along Sunrise Boulevard, which would be accessible from the Plan Area via a series of sidewalks. The placement of a transit center in this location would also encourage employees and customers at the Birdcage Center (west of Sunrise Boulevard) to travel to those locations by bus. Additionally, the Specific Plan would provide improved bus stop facilities along Greenback Lane. Review of the Specific Plan against applicable General Plan policies did not yield any inconsistencies.

The Sacramento RT Service Standards establish on-time performance standards as indicators for service reliability. On-time performance for Sacramento RT is measured at time points along a route. A bus is considered on-time if it leaves its time point between 0 and 5 minutes late. Sacramento RT's target is for the bus system to be 85 percent on-time or better. Sacramento RT's target is for individual bus routes to be within one standard deviation of 85 percent on-time or better (equal to 77 percent or better based on October 2019 data). In October 2019, systemwide on-time performance for Sacramento RT bus routes was 73 percent, with 3 percent early departures and 24 percent late departures. In September 2019, Route 1 had 85 percent on-time performance, Route 21 had 79 percent on-time performance, and Route 23 had 75 percent on-time performance. Route 21 operates on Sunrise Boulevard along the project frontage, and all three routes travel through the Sunrise Boulevard/Greenback Lane intersection. Project-related delay increases along the Sunrise Boulevard and Greenback Lane corridors could added travel time for buses operating in the area, which could contribute to Sacramento RT on-time bus performance objectives not being met.

Additionally, vehicle queues in the southbound left-turn lane at the Sunrise Boulevard/Birdcage Center/Primary Street A intersection would exceed the 250 feet of available storage. Since southbound buses would use this lane to access the on-site transit center passenger loading area, buses would incur added delay due to this lack of capacity. Therefore, Specific Plan impacts to transit services would be potentially significant.

Part (a) of Mitigation Measure 3.12-3 would make use of an extra wide (19 feet) outside northbound travel lane directly north of Greenback Lane. However, this width becomes utilized as a bus turnout beginning 60 feet north of the intersection. The proposed design would result in buses stopping in the outside travel lane on Sunrise Boulevard north of Greenback Lane, similar to what exists in many locations in the area. The addition of a third left-turn lane would require minor narrowing of travel lanes on Sunrise Boulevard to dedicate the needed pavement for the third left-turn lane (and for lane transitioning across the intersection). This improvement may also require minor encroachment into the project site to provide the northbound right-turn lane.

Parts (a) through (d) of Mitigation Measure 3.12-3 would reduce delays to buses because the mitigation would lengthen the lanes buses use, make bus travel and movements more efficient, or

remove traffic from adjacent lanes buses would travel. Part (e) of Mitigation Measure 3.12-3 would require minor widening easterly into the Plan Area to accommodate the added lane. Although a four-foot raised median is present, additional pavement would be required beyond what could be accomplished with restriping.

The three northbound right-turn deceleration lanes recommended in part (f) of Mitigation Measure 3.12-3 are beneficial to bus operations, as described below. These three right-turn movements would serve an expected 400 combined vehicles during the weekday PM peak hour. Without the deceleration lanes, those vehicles would be queued in the far outside travel lane along with through traffic (including buses), thereby contributing to increased bus delays. The deceleration lanes would remove those vehicles from the queue, thereby improving on-time bus performance.

Part (g) of Mitigation Measure 3.12-3 was developed in collaboration with Sacramento RT to further reduce bus delays by providing preferential bus right-of-way. The considerable distance between Primary Streets A and B (820 feet) suggests that there should be a 100 to 200-foot mid-block section in which northbound Sunrise Boulevard consists of three lanes. To the north and south of that mid-block point, four lanes would exist. This configuration would prevent passenger vehicles from continuously traveling in the bus lane / right-turn deceleration lane, bypassing stopped traffic.

In summary, seven distinct mitigation measures are recommended and would minimize disruptions to transit service. Refer to Figure 3.12-10 for illustration of improvements described in Mitigation Measures 3.12-1 through 3.12-5. With implementation of Mitigation Measure 3.12-3, this impact would be ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-3: *The individual planning area owners/applicants shall implement prior to issuing certificate of occupancy permits the following improvements in accordance with the Sunrise Tomorrow Transportation Financing and Implementation Plan adopted by the City of Citrus Heights:*

a. *Construct a third left-turn lane on the northbound Sunrise Boulevard approach to Greenback Lane.*
b. *Increase the storage of the eastbound right-turn lane at the Sunrise Boulevard/Greenback Lane intersection from 115 to 160 feet through expanded lane striping.*
c. *Increase the storage of the northbound right-turn lane at the Sunrise Boulevard/Greenback Lane intersection from 130 to 190 feet.*
d. *Operate the northbound and eastbound approaches to the Sunrise Boulevard/Greenback Lane intersection with right-turn overlap phasing (requiring prohibition of u-turns on the northbound and westbound approaches).*
e. *Construct a second southbound left-turn lane at the Sunrise Boulevard/Birdcage Center/Primary Street A intersection.*
f. *Construct northbound right-turn deceleration lanes at the following locations:*
    i. *Sunrise Boulevard/Birdcage Center/Primary Street A: 250-foot lane;*
    ii. *Sunrise Boulevard/Primary Street B: 250-foot lane;*

iii. Sunrise Boulevard/Macy Plaza Drive/Parkway B: 100-foot lane.

g. Collaborate with SacRT who would take the lead in converting the following turn lanes to dedicated bus-only lanes at such time that a Bus Rapid Transit service is established along the Sunrise Boulevard corridor:

- *Convert the southbound outside left-turn lane at Sunrise Boulevard/Birdcage Center/Primary Street A to a "bus-only" lane to enable efficient bus access to the transit center;*
- *Convert the northbound right-turn lane at Primary Street B to a bus-only lane directly north of the signal to enable buses to access the bus stop more efficiently from the turn lane; and*
- *Convert the northbound right-turn lane at Primary Street A to a bus "queue jump" lane.*

Impact 3.12-5: Specific Plan implementation could result in on-site circulation and access that does not meet City or industry standard design guidelines (Less than Significant with Mitigation)

Figure 3.12-6, Vehicular Access, displays on-site circulation amenities such as valet/rideshare drop-off/pick-up areas, loading zones for trucks, and drive aisle access openings to surface lots and garages. Many of the plan elements have been designed to industry standards. However, Parkway A and Parkway B would both be public streets. Accordingly, they must be designed to current City standards. The two roundabouts have not been evaluated to determine if they comply with Sacramento Metro Fire District standards. Additionally, several of the Plan Area accesses would not have sufficient on-site throat depths to accommodate outbound project trips. If exiting traffic spills back to the first internal intersection at these access points, those intersections could become blocked, thereby restricting the flow of inbound traffic and causing queue spillbacks onto Sunrise Boulevard or Greenback Lane. For these reasons, impacts to on-site circulation and access would be potentially significant.

Mitigation Measure 3.12-4 requires implementation of certain access improvements. Each of these improvements are considered feasible because they would occur within the Plan Area. Additionally, analysis of their capacity versus projected travel demands indicate that the improvements would accommodate exiting traffic and would not cause any inbound traffic to spill onto public streets. Part (b) of Mitigation Measure 3.12-4 would require the roundabouts to be designed to City standards.

With implementation of Mitigation Measure 3.12-4, this impact would be ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-4: *The individual planning area owners/applicants shall implement prior to issuing certificate of occupancy permits the following improvements in accordance with the Sunrise Tomorrow Transportation Financing and Implementation Plan adopted by the City of Citrus Heights:*

a. *Provide the following minimum throat depths and related improvements to accommodate outbound traffic at the Plan Area accesses:*
    i. *Unsignalized Sunrise Driveway on Sunrise Boulevard: provide 150 feet of storage;*
    ii. *Sunrise Boulevard/Birdcage Center/Primary Street A: provide exclusive left, through, and right-turn lanes and operate right-turn with an overlap arrow. Provide 300 feet of storage in each lane;*
    iii. *Sunrise Boulevard/Primary Street B: provide 300 feet in the westbound left and through/right lanes;*
    iv. *Unsignalized Primary Street C Driveway on Sunrise Boulevard: provide 250 feet of storage;*
    v. *Sunrise Boulevard/ Macy Plaza Drive/Parkway B: provide 250 feet in the westbound left and through/right lanes;*
    vi. *Unsignalized Westerly (secondary) Driveway on Greenback Lane: provide 50 feet of storage;*
    vii. *Unsignalized Main Entry E Driveway on Greenback Lane: provide 100 feet of storage;*
    viii. *Greenback Lane/Arcadia Drive/Parkway A: provide 275 feet in the dual left and through/right lanes.*
b. *Design and construct the two roundabouts on Parkway A and B to City of Citrus Heights and Sacramento Metro Fire District standards.*

Impact 3.12-6: Specific Plan implementation could substantially increase hazards due to geometric design features (Less than Significant with Mitigation)

The signalized left-turn lane on westbound Greenback Lane into the Plan Area (at Parkway A, opposite Arcadia Drive) would have a maximum queue that exceeds the available storage. This could cause a substantial hazard due to queued vehicles extending out of the turn lane into the adjacent through lane. Therefore, the impact at the signalized left-turn lane on westbound Greenback Lane into the Plan Area would be potentially significant. No other site circulation or access issues have been identified that would cause a traffic safety problem/hazard or any unusual traffic congestion or delay.

Mitigation Measure 3.12-5 would require removal of a portion of a modest sized raised median featuring landscaping. Since this mitigation is feasible and would provide adequate storage to accommodate project trips, it would reduce the impact to ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-5: *The individual planning area owners/applicants shall implement prior to issuing certificate of occupancy permits the following improvements in accordance with the Sunrise Tomorrow Transportation Financing and Implementation Plan adopted by the City of Citrus Heights:*

- *Lengthen westbound left-turn lane on Greenback Lane at Arcadia Drive/Parkway A from 290 feet to 325 feet.*

Impact 3.12-7: Specific Plan implementation would not result in inadequate emergency vehicle access (Less than Significant)

The proposed Specific Plan would not result in inadequate emergency access during construction or operation. Nearby traffic signals include emergency vehicle pre-emption, which would ensure that emergency vehicles can move through an intersection as quickly as possible. Sacramento Metro Fire Station 21 is situated about two-thirds of a mile west of the Plan Area along Greenback Lane. The California Fire Code requires a minimum of two access points to a project of this size. The provision of multiple access points to the Plan Area would satisfy this requirement and ensure that adequate emergency access would be provided. For these reasons, impacts to emergency vehicle access would be ***less than significant***.

Impact 3.12-8: Specific Plan implementation could cause temporary but prolonged impacts due to lane closures, need for temporary signals, emergency vehicle access, traffic hazards to bikes/pedestrians, damage to roadbed, or truck traffic on roadways not designated as truck routes (Less than Significant with Mitigation)

Demolition of existing buildings and construction of the proposed Specific Plan would generate a variety of truck and employee trips. Construction staging and lane closures could cause adverse impacts to local/regional traffic circulation if not carefully planned. Adverse impacts associated with construction activities may include reduced vehicle safety, interference with emergency vehicle circulation, traffic hazards to bikes or pedestrians, damage to roadbeds, and potential truck traffic on roadways not designated as truck routes. Construction of the proposed Specific Plan could cause a temporary but prolonged impact to transportation and circulation in the project vicinity. For these reasons, traffic impacts during construction are considered potentially significant.

With implementation of a Construction Traffic Management Plan required by Mitigation Measure 3.12-6, impacts relating to traffic circulation and operations during construction would be ***less than significant***.

MITIGATION MEASURE(S)

Mitigation Measure 3.12-6: *Prior to issuance of a grading, building, or demolition permit, the planning area owners/applicants shall develop and implement a Construction Traffic Management Plan to the satisfaction of the City of Citrus Heights's General Services Department.*

The plan shall include items such as the number and size of trucks per day, expected arrival/departure times, truck circulation patterns, location of truck staging areas, location of employee parking, the proposed use of traffic control, and proposed partial street closures on public streets. The City of Citrus Heights' General Services Department shall approve the plan prior to the start of project demolition and construction. The overall goal of the Construction Traffic Management Plan would be to minimize traffic impacts to public streets and maintain a high level of safety for all roadway users. The Construction Traffic Management Plan shall achieve the following performance standards throughout project construction:

- *Construction activities do not require the temporary closure of a travel lane of Sunrise Boulevard or Greenback Lane during peak commute hours.*
- *Delivery trucks do not idle/stage on Sunrise Boulevard, Greenback Lane, Arcadia Drive, or any local streets.*
- *Demolition and construction trucks are routed along arterial roadways consistent with the City's Approved Truck Routes Map (found at: https://www.citrusheights.net/DocumentCenter/View/2845/Truck-Route-Map?bidId=).*
- *All construction employees park on site.*
- *Roadways, sidewalks, crosswalks, and bicycle facilities are maintained clear of debris (e.g., rocks) that could impede travel and impact public safety.*

Land Use Plan

This page left intentionally blank.

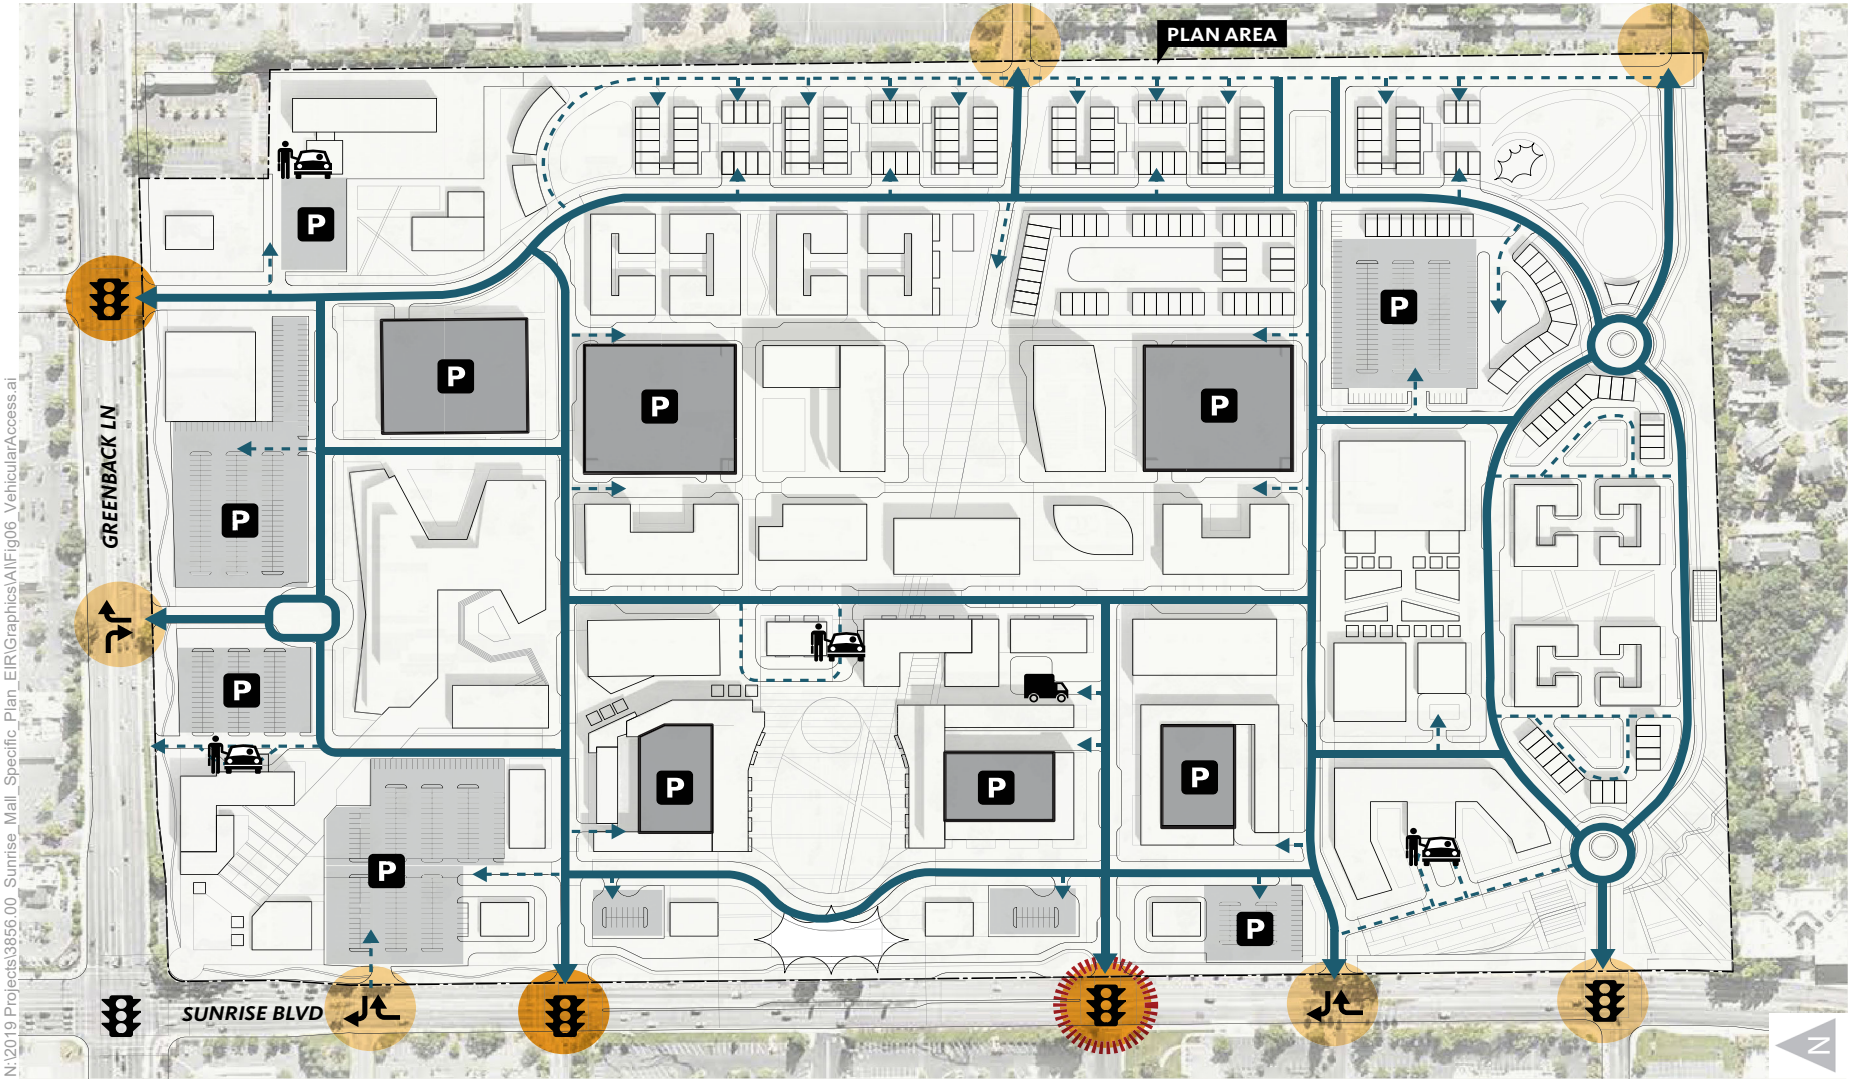
Main Street:
Allows for flexible space that can be easily closed off for special events.

Primary Roads:
Allow for site-wide access circulation with one lane in each direction.

Secondary Roads:
Allow for local circulation with one lar in each direction.

Green Loop:
Dedicated pedestrian and bike path.

Parkway:
Publicly owned an operated street offering major through-way and connectors to adjacent arterials.



Primary Entries:
Allow for ingress and egress with two lanes in each direction.

Secondary Entries:
Allow for ingress and egress with one lane in each direction.

Figure 3.12-5

Internal Street Network

This page left intentionally blank.

Vehicle Roadways:
Allows for efficient vehicular circulation of the site and create connections to city.

Driveways & Entry Points:
Access points to various destinations within the site.

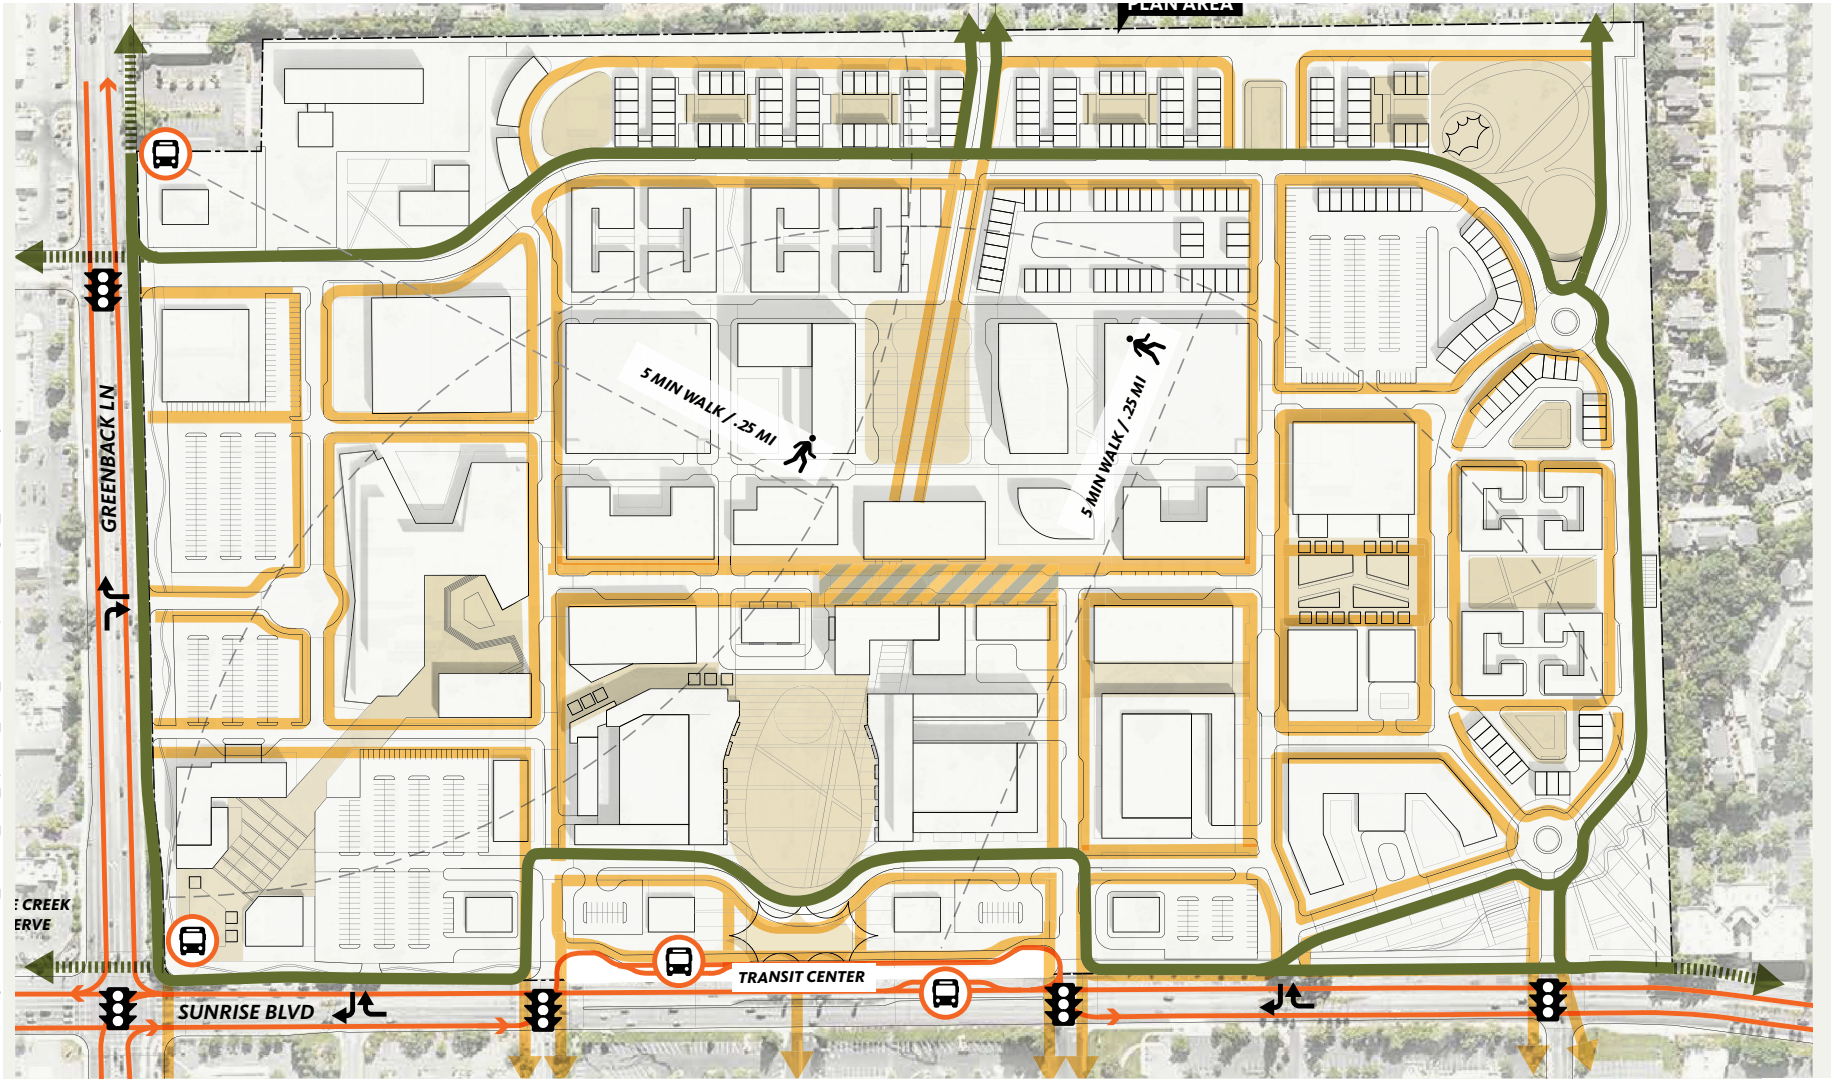
Loading:
Service access for delivery trucks.

Drop Off:
Access for rideshare pickup and drop off.

Primary Vehicular Entries:
Two lanes in each direction.

Secondary Vehicular Entries:
One lane in each direction.

New Traffic Signal:
Traffic signal added to manage the flow of traffic into the site.



Right-In/Right-Out Entry:
Right-in/right-out entrance to the site.

Parking Structure:
Multi-level parking structure for compact parking.

Surface Lot:
Ground level surface parking.

This section describes the regulatory setting, impacts associated with wastewater services, water services, and solid waste disposal that are likely to result from Specific Plan implementation, and measures to reduce potential impacts to wastewater, water supplies and solid waste. A discussion of the proposed Specific Plan's storm drainage and flood control facilities is included in Section 3.8, Hydrology and Water Quality. Therefore, storm water drainage and infrastructure are not addressed in this EIR section. This section is based in part on the following documents, reports and studies:

- *Citrus Heights General Plan* (City of Citrus Heights, Adopted August 11, 2011);
- *Citrus Heights General Plan Draft Environmental Impact Report* (City of Citrus Heights, July 2011);

Comments were received during the public review period for the Notice of Preparation regarding this topic from the following: Central Valley Regional Water Quality Control Board (RWQCB) (September 2020). The comment is addressed within this section.

3.13.1 WASTEWATER SERVICES

EXISTING SETTING

Wastewater Conveyance and Treatment

Sanitary-sewer service for the Specific Plan would be provided by Sacramento Area Sewer District (SASD) and the Sacramento Regional County Sanitation District (Regional San). SASD operates and maintains the laterals and main line pipes for wastewater conveyance and collection from the source to the Regional San interceptors. Regional San is responsible for collection by interceptors (sanitary sewers that are designed to carry flows in excess of 10 million gallons per day [mgd]) and for wastewater treatment in Sacramento County. This district owns, operates, and is responsible for the collection, trunk, and interceptor sewer systems throughout Sacramento County as well as the Sacramento Regional Wastewater Treatment Plant (SRWTP) located near Elk Grove.

The main SASD collection system includes over 3,000 miles of sewer pipelines ranging in size from 6 to 75 inches in diameter. The collection system pipelines are categorized based on size, function, and hydraulic capacity. Sewer collectors generally receive flow directly from individual homes and businesses and are designed to carry less than one mgd of peak wet-weather flow (PWWF). In general, collector sewers are 10 inches and smaller in diameter and comprise the majority (over 85

percent) of the pipes in the collection system. Trunk sewers carry one mgd of PWWF or more to the Regional San interceptor system. Trunk sewers are generally 12 inches in diameter.

Regional San evaluated the environmental impacts of constructing trunk and interceptor sewers that would serve most of the Sacramento region (including the Plan Area) at a program level in the *Sacramento Regional County Sanitation District Interceptor Master Plan 2000, Draft Program Environmental Impact Report* (State Clearinghouse [SCH] #2001112085). The EIR was certified by Regional San and the master plan was approved in March 2003.

The purpose of the *Sacramento Regional County Sanitation District Interceptor System Master Plan 2000* (Regional San 2003a) (Regional San Interceptor Master Plan 2000) is to identify near- and long-term improvements needed for the regional wastewater conveyance system. The master plan describes the regional interceptor projects, along with their timing and costs, so that existing and future deficiencies in the regional system can be more accurately identified and predicted and strategic approaches to remedying these deficiencies can be developed. The plan uses information regarding population growth, wastewater flow generation, and actual system responses to wet weather.

Wastewater flows collected from the Regional San interceptors are ultimately transported into the SRWTP. Wastewater conveyed to the SRWTP is treated to a secondary level and is ultimately discharged into the Sacramento River. Currently, the SRWTP has a National Pollutant Discharge Elimination System (NPDES) permit issued by the Central Valley RWQCB for discharge of up to 181 mgd of treated effluent into the Sacramento River.

In addition, Regional San recently established the South County Agriculture & Habitat Lands Recycled Water Program with the purpose of increasing its use of recycled water by using highly treated tertiary effluent as irrigation water in lieu of groundwater. The Program will provide up to 50,000 acre-feet per year of Title 22 tertiary-treated recycled water to irrigate up to 16,000 acres of permanent agriculture and habitat conservation lands near the Cosumnes River and Stone Lakes Wildlife Refuge in Sacramento County.

The recycled water will be conveyed from SRWTP to agricultural lands in southern Sacramento County via new transmission and delivery pipeline infrastructure. Concurrently, major upgrades at the SRWTP are underway via the EchoWater Project which will increase the production capacity of tertiary treated wastewater at the SRWTP from 3 million gallons per day (mgd) to 217 mgd; of this amount, up to 114 mgd will be available for recycled water use.

The *Sacramento Regional Wastewater Treatment Plant 2020 Master Plan* (Regional San 2001) (2020 Master Plan) provides a phased program of recommended wastewater treatment facilities and management programs to accommodate planned growth and to meet existing and anticipated regulatory requirements through the year 2020. The master plan addresses both public health and environmental protection issues while providing reliable service at affordable rates for Regional San customers. The key goals of the master plan are to provide sufficient capacity to meet growth projections and an orderly expansion of SRWTP facilities, comply with applicable water quality

standards, and provide for the most cost-effective facilities and programs from a watershed perspective.

The 2020 Master Plan relies on the Sacramento Area Council of Government's (SACOG's) population projections to determine SRWTP capacity requirements within the Regional San service area, which includes the Plan Area, through 2020 (Regional San 2003b:3-22). The 2020 Master Plan projected that the population in the Regional San service area would be 1,549,502 persons by 2020 (Regional San 2003b:5-5). The population projections used in the master plan do not represent a buildout population total for Regional San; rather, they represent the amount of growth expected within the Regional San service area.

Wastewater flows increased relatively rapidly after the SRWTP first opened in the 1980s, with continued growth through the early 2000s and reached a peak of around 155 mgd average dry weather flow (ADWF) around 2005. Since that time, flows have been substantially reduced through water conservation, closure of water intensive industries, and other factors. In 2010, the SRWTP treated approximately 141 mgd ADWF (Regional San, Echo Water Project Draft EIR, 2014). In recent years, ADWFs have ranged from approximately 120 mgd (as reported in Order R5-2016-0020 (NPDES NO. CA0077682)) to 127 mgd, as reported in the 2017 State of the District Report, (Regional San, 2017) and Final Budget Fiscal Year 2018-19 (Regional San, 2018). In development of the Echo Water Project Draft EIR, the District reviewed its projections and concluded that 181 mgd ADWF provides sufficient capacity for the next 40 plus years (Regional San, Echo Water Project Draft EIR, 2014).

Order R5-2016-0020 (NPDES NO. CA0077682) regulates the discharge of secondary treated municipal wastewater and allows an average dry weather discharge flow of 181 mgd to the Sacramento River, within the Sacramento-San Joaquin Delta (Delta). The existing secondary treatment at the SRWTP consists of preliminary screening and grit removal, primary sedimentation, a pure oxygen activated sludge treatment system, and chlorination for disinfection and dechlorination. SRWTP's current permitted discharge is 181 mgd (average dry weather flow) and flows at the time of Order R5-2016-0200 averaged 120 mgd. Regional San is currently upgrading the SRWTP to replace the pure oxygen activated sludge system with a biological nutrient removal activated sludge system in order to meet new effluent limits for ammonia and nitrate by May 11, 2021. In addition, tertiary filtration facilities and chlorine contact chamber will be added to meet new disinfection requirements by May 9, 2023.

REGULATORY SETTING - WASTEWATER

Clean Water Act (CWA) / National Pollutant Discharge Elimination System (NPDES) Permits

The CWA is the cornerstone of water quality protection in the United States. The statute employs a variety of regulatory and non-regulatory tools to sharply reduce direct pollutant discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. These tools are employed to achieve the broader goal of restoring and maintaining the chemical,

physical, and biological integrity of the nation's waters so that they can support "the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water."

The CWA regulates discharges from "non-point source" and traditional "point source" facilities, such as municipal sewage plants and industrial facilities. Section 402 of the Act creates the NPDES regulatory program which makes it illegal to discharge pollutants from a point source to the waters of the United States without a permit. Point sources must obtain a discharge permit from the proper authority (usually a state, sometimes EPA, a tribe, or a territory). NPDES permits cover industrial and municipal discharges, discharges from storm sewer systems, storm water associated with numerous kinds of industrial activity, runoff from construction sites disturbing more than one acre, mining operations, and animal feedlots and aquaculture facilities above certain thresholds.

Permit requirements for treatment are expressed as end-of-pipe conditions. This set of numbers reflects levels of three key parameters: (1) biochemical oxygen demand (BOD), (2) total suspended solids (TSS), and (3) pH acid/base balance. These levels can be achieved by well-operated sewage plants employing "secondary" treatment. Primary treatment involves screening and settling, while secondary treatment uses biological treatment usually in the form of "activated sludge."

All so-called "indirect" dischargers are not required to obtain NPDES permits. An indirect discharger is one that sends its wastewater into a city sewer system, so it eventually goes to a sewage treatment plant. Although not regulated under NPDES, "indirect" discharges are covered by another CWA program called pretreatment. "Indirect" dischargers send their wastewater into a city sewer system, which carries it to the municipal sewage treatment plant, through which it passes before being discharged to surface water.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act is California's statutory authority for the protection of water quality. Under the Porter-Cologne Act, the State is required to adopt policies, plans, and objectives that will protect the State's waters for the use by and enjoyment of Californians. In California, the State Water Resources Control Board (SWRCB) has the authority and responsibility for establishing policy related to the State's water quality. Regional authority is delegated by the SWRCB to a Regional Water Quality Control Board (RWQCB). The Porter-Cologne Act authorizes the SWRCB and RWQCB to issue NPDES permits.

Under the Central Valley Regional Water Quality Control Board (CVRWQCB) NPDES permit system, all existing and future municipal and industrial discharges to surface water within the city would be subject to regulation. NPDES permits are required for operators of municipal separate storm sewer systems, construction projects, and industrial facilities. These permits contain limits on the amount of pollutants that can be contained in each facility's discharge.

City of Citrus Heights General Plan

The Citrus Heights General Plan contains the following goal and policies that are relevant to wastewater:

COMMUNITY HEALTH ELEMENT

Goal 62: Facilitate a safe and abundant water supply and efficient wastewater collection, treatment and disposal system.

Policy 62.6: Ensure adequate sewer collection, treatment and disposal services for all community residents.

Policy 62.7: Support efforts of the Sacramento County Regional Sanitation District in wastewater reclamation.

THRESHOLDS OF SIGNIFICANCE - WASTEWATER

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on the environment associated with wastewater facilities if it will:

- Require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects; and/or
- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the projects projected demand in addition to the providers existing commitments.

IMPACTS AND MITIGATION MEASURES

Impact 3.13-1: Specific Plan implementation would not require or result in the relocation or construction of new or expanded wastewater facilities, the construction of which could cause significant environmental effects (Less than Significant)

The Plan Area is currently served by a system of existing vitrified clay pipe (VCP) mains and building laterals that convey on-site sewer from the site for treatment. The 8" VCP sanitary sewer on the north side of the mall site is conveyed to the northwest corner of the mall where it continues south along the western mall frontage to the southwest corner of the main mall. Sewer mains conveying wastewater south along the eastern mall frontage all confluence at the same southwest corner of the main mall. The site system conveys wastewater through a final 8" main that ties into an existing sewer manhole and into the 15" public sewer main/collector located on the east side of Sunrise Boulevard.

With the Maximum Development scenario, most of the existing sewer lines would need to be removed, reconfigured, and replaced in kind. Under the proposed Specific Plan Maximum Development conditions, sewer flows would increase significantly from approximately 0.04 mgd to approximately 0.10 mgd due to the addition of residential, office, restaurants, hotels, retail, and entertainment uses. There would be a network of sewer collection infrastructure installed throughout the Plan Area to serve the Sunrise Tomorrow Specific Plan. Developer(s) would be required to prepare a proposed sanitary sewer plan showing new laterals and details needed for

each of the new parcels/buildings. Sanitary Sewer plans shall be submitted to both SASD and the City of Citrus Heights for review and approval. All sanitary sewer piping shall be placed to meet SASD requirements, at a minimum, and configured to minimize clearance conflicts with other site utilities (especially potable water mains; per Title 22, California Code of Regulations for new construction)-prior to SASD's ultimate acceptance.

CONCLUSION

The potential for environmental impacts associated with the installation of the wastewater collection system, and all construction activities within the Plan Area, are addressed throughout this EIR. The installation of the wastewater collection system for the Sunrise Tomorrow Specific Plan does not cause any impacts above what is already analyzed and disclosed for each environmental topic in this EIR. This is a ***less than significant*** impact relative to this environmental question.

Impact 3.13-2: Specific Plan implementation has the potential to result in a determination by the wastewater treatment and/or collection provider which serves or may serve the project that it does not have adequate capacity to serve the Plan's projected demand in addition to the provider's existing commitments (Less than Significant)

The Plan Area is served by SASD. SASD owns, operates, and maintains thousands of miles of (mainly) gravity pipes (lower laterals & main lines) in the City of Citrus Heights. Once SASD's system collects the wastewater, it flows into the Sacramento Regional County Sanitation District (Regional San) Interceptor System. Through miles of mains, the wastewater is conveyed to the Regional San Wastewater Treatment Plant near Elk Grove via 84" and 106" interceptors at Cosumnes River Blvd.

The Waste Discharge Requirements (WDRs) Order No. R5-2016-0020, includes: Discharge Prohibitions, Discharge Specifications, Effluent Limitations, Land Discharge Specifications, Reclamation Specifications, Surface Water Limitations, and Groundwater Limitations. This Order was adopted on April 21, 2016. Regional San Treatment Plant is currently in compliance with the WDR requirements of Order No. R5-2016-0020, NPDES No. CA0077682. Implementation of the Sunrise Tomorrow Specific Plan would be covered under the existing capacity (as discussed below) and would not exceed the wastewater discharge requirements in this Order.

SPECIFIC PLAN WASTEWATER GENERATION

The SASD Interceptor System Master Plan projects new development associated with implementation of the Specific Plan would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 592 mgd at full build-out of the Upper Northwest service area and special areas of concern, including the Specific Plan Area. The estimated wastewater discharge for full buildout of the proposed specific plan would be approximately 0.1 mgd, as shown in Table 3.13-1.

TABLE 3.13-1: PROJECTED SEWER DEMAND

USE	*ACRES*	*I/I (INFILTRATION AND INFLOW)*	*ESD (EQUIVALENT SINGLE-FAMILY DWELLING)*	*ADWF (AVERAGE DRY WEATHER FLOW)*	*PF (PLANT FACTOR)*	*PWWF (PEAK WET-WEATHER FLOW)*
Residential (Multi-Family)	15.5	0.021734389	0.75	0.0002325	2.315340196	0.022272706
Commercial (inlc. Mixed-Use)	49.3	0.069017686	6.00	0.00186	2.185537647	0.073082786
			Total	**0.095355492 mgd**		

NOTES: BASED ON MAXIMUM DEVELOPMENT ALLOWED.

ESD: EQUIVALENT SINGLE-FAMILY DWELLING

I/I: INFILTRATION AND INFLOW

SASD USES THE FOLLOWING EQUATIONS TO DETERMINE FLOWS:

- *PWWF (MGD) = (ADWF * PF) + I/I*
- *ADWF (MDG) = (310 GPD/ESD) * (# ESDS/ACRE) * (# ACRES) / 1,000,000*
- *PF = 3.5 - 1.8 * ADWF0.05 WHERE ADWF IS IN MGD, AND A MINIMUM VALUE OF PF IS 1.2*
- *I/I (MDG) = 1,400 GPD/ACRE * (# ACRES) / 1,000,000, FOR NEW PIPELINES AND EXISTING PIPELINES < 5 YEARS OLD*
- *I/I (MDG) = 1,600 GPD/ACRE * (# ACRES) / 1,000,000, FOR NEW PIPELINES AND EXISTING PIPELINES > 5 YEARS OLD*

MAIN LINE CAPACITY, IN ALL CASES, MUST BE ADEQUATE TO CARRY THE DESIGNED PWWF FROM THE ENTIRE TRIBUTARY AREA, EVEN IF SAID AREA IS NOT WITHIN PROJECT BOUNDARIES, THE PROPOSED DESIGNED PWWF FOR EACH PIPE IN THE SEWER COLLECTION SYSTEM MUST NOT EXCEED THE FULL PIPE CAPACITY.

SOURCE: SACRAMENTO REGIONAL COUNTY SANITATION DISTRICT INTERCEPTOR SYSTEM MASTER PLAN, 2000.

COLLECTION SYSTEM

The Sunrise Tomorrow Specific Plan would require the extension of wastewater collection and treatment services into the Specific Plan Area. The existing wastewater collection system is owned and operated by SASD. SASD owns, operates, and maintains approximately 2,800 miles of (mainly) gravity pipes (lower laterals & main lines) in the City of Citrus Heights, ranging in size from four to 75 inches in diameter. The City of Citrus Heights is located in the District's Northeast System. The Northeast System is the largest of the sewer trunk systems in the SASD, totaling approximately 552,000 feet of pipeline ranging in size from 12 to 75 inches diameter sewers.

At times of peak use, the interceptor system carries as much as 400 million gallons of wastewater per day. The ADWF of wastewater to the treatment plant is 150 mgd, with the PWWF reaching 312 mgd. The total projected ADWF at buildout of the Specific Plan within the Sewerage Service Area is estimated to be 0.002 mgd. The total projected PWWF is approximately 0.09 mgd. Therefore, the existing collection system operated by SASD has adequate downstream capacity to accept the volume of Sanitary Sewer projected to generated by the proposed Plan.

Once SASD's system collects the wastewater, it flows into the Sacramento Regional County Sanitation District (Regional San) Interceptor System. Through miles of mains, the wastewater is conveyed to the Regional San Wastewater Treatment Plant near Elk Grove via 84" and 106" interceptors at Cosumnes River Blvd. A discussion of the proposed on-site wastewater collection system is included in Impact 3.13-1.

An initial analysis by SASD in February 2021 concluded the primary outfall serving the Plan Area may needed to be upgraded to a 10-inch diameter main; the current capacity of the existing 15-inch public sewer main/collector along Sunrise Boulevard is expected to be adequate increased flows resulting from full build-out of the Plan Area.

TREATMENT SYSTEM

The Regional San Treatment Plant provides regional wastewater treatment, disposal, and reclamation facilities for the city of Citrus heights. The Regional Treatment Plant, owned and operated by Regional San, would serve the proposed Specific Plan. The Regional San Treatment Plan has a design capacity for up to 12 to 34 mgd, the average annual flow of approximately 23 mgd, for the Upper Northwest interceptor Plan Area, which encompasses the plan area.

CONCLUSION

The proposed Specific Plan would increase the amount of wastewater requiring conveyance and treatment. It is noted that Regional San recently established the South County Agriculture & Habitat Lands Recycled Water Program with the purpose of increasing its use of recycled water by using highly treated tertiary effluent as irrigation water in lieu of groundwater. Increase in wastewater flows as a result of the proposed Specific Plan could be offset by other projects in the Service Area which incorporate greywater irrigation through this program. The use of recycled water in Regional San's Service Area could potentially reduce wastewaters flows which require treatment. Nevertheless, the wastewater would be treated at the Regional Facility. Given the capacity of 12 to 34 mgd, and the 0.1 mgd generated by the buildout of the Plan Area (including existing demand and future demand), there is sufficient plant capacity. This is a ***less than significant*** impact.

3.13.2 WATER SUPPLIES

EXISTING SETTING

Water Service Area

Domestic water service to the City of Citrus Heights is provided by three water districts. The water provider in the Plan Area vicinity is the Citrus Heights Water District (CHWD). The CHWD was formed on October 25, 1920, and is one of the oldest public agencies in the City. The CHWD receives surface water from the San Juan Water District (SJWD). As documented in the SJWD Urban Water Management Plan, SJWD operates a 150 million gallon per day (mgd) water treatment plant (WTP); storage facilities; several pump stations; and 17 miles of transmission facilities. SJWD's wholesale customers include the City of Folsom, north of the American River; CHWD; Fair Oaks Water District; Orangevale Water Company; and San Juan Water District Retail. SJWD has three primary sources of surface water supplies: (1) pre-1914 water rights, (2) a long-term Central Valley Project contractual supply, and (3) a long-term contract with Placer County Water Agency. Surface water from these three sources is diverted through U.S. Bureau of Reclamation facilities at Folsom Dam and delivered to the Sidney N. Peterson WTP, and then sent to the Hinkle Reservoir before being distributed to the CHWD (Kennedy Jenks 2016).

CHWD and the other wholesale customer agencies of SJWD routinely coordinate supply planning and other issues, such as through membership and participation in the Regional Water Authority and the Sacramento Groundwater Authority. The Regional Water Authority coordinates regional water supply planning and represents member agencies regarding state-wide water issues. The Sacramento Groundwater Authority helps support management and monitoring of the groundwater basin to maintain sustainability.

The CHWD participated in the Water Forum, a regional stakeholder effort to ensure reliable water supplies for the region through the year 2030 and to protect the environmental, aesthetic, and recreational values of the Lower American River. The Water Forum process began in the early 1990s and a comprehensive Water Forum Agreement (WFA) was adopted by the Water Forum participants in 2000. In addition, purveyor-specific agreements for each water purveyor based on the commitments made in the WFA were signed in 2000.

Water Forum stakeholders developed the WFA as an integrated package of actions that will meet the two primary objectives of the Water Forum. Each element of the WFA is necessary for a regional solution to work. These elements are:

- Increase surface water divisions;
- Actions to meet customers' needs while reducing diversion impacts on the lower American River in drier years;
- An improved pattern of fishery flow releases from Folsom Reservoir;
- Lower American River Habitat Management, which also addresses recreation in the lower American River;
- Water conservation;

- Groundwater management; and
- Water Forum successor efforts.

Under the WFA and the purveyor-specific agreements, water agencies may be expected to reduce their surface water diversions in certain dry years, depending on the inflow of water into Folsom Reservoir. As occurred in the recent drought, the WFA envisions that water agencies will meet customer demands during the dry years through a mix of conjunctive use and conservation programs to reduce customer demands (CHWD 2016).

Citrus Heights Water District Water Supplies

CHWD uses purchased surface water, self-supplied surface water and groundwater as its sources of water supply. The Department of Water Resources (DWR) defines purchased water as water purchased from other suppliers, including non-self-supplied surface water. The water demands of the Specific Plan will be met with groundwater and surface water. Both of these sources are discussed in detail below.

SURFACE WATER

SJWD treats water from Folsom Lake at Peterson WTP located near the southeastern edge of Folsom Lake in Granite Bay. The Peterson WTP provides domestic water supply meeting federal and state drinking water standards, with a treatment capacity of 150 million gallons per day. SJWD serves five wholesale customer agencies, with a total population of 151,131 and 50,850 connections. The CHWD territory includes a population of 65,093 (43% of the total population) through 19,785 connections (39% of the total connections). In 2015, the CHWD supplied a total of 9,974 acre-feet of water, with 78% of this water going to residential customers. In the 2015 Urban Water Management Plan, CHWD projects relatively low population growth, with a 0.5% annual increase in connections. The population is estimated to increase to 66,720 by 2020 and 68,348 by 2025.

SJWD has supplied the CHWD with between 17,000 acre-feet to 20,500 acre-feet of surface water annually between 1998 and 2008. In 2015, SJWD projected total wholesale demands of 31,223 acre-feet of water, of which 30,276 acre-feet were sold to other agencies. The remaining demands were for flows to Baldwin reservoir, process water used at the Peterson WTP, golf course irrigation, and estimated system losses. Annual water demand between 2000 and 2008 had been higher, ranging between 50,000 and 60,000 acre-feet per year, and has been trending downward since 2008. In 2015, SJWD's retail customers exceeded the 36% reduction in water use mandated by the State Water Resources Control Board in 2015.

SJWD's water supply includes pre-1914 rights to 33,000 acre-feet per year (AFY) of water from Folsom Reservoir. It also includes an additional 24,200 AFY of Central Valley Project water from Folsom Reservoir through a contract with the U.S. Bureau of Reclamation and 25,000 AFY through a contract with the Placer County Water Agency. However, these can be substantially reduced in dry years. In 2015, SJWD was allowed only 796 acre-feet under its contract with the U.S. Bureau of Reclamation and 10,000 acre-feet from the Placer County Water Agency. SJWD has water rights to 53,700 acre-feet in 2018 and 46,000 acre-feet in 2019, as shown in Table 3.13-2. According to the

SJWD, even in the driest water year, sufficient water supply is available to serve its retail water agencies.

TABLE 3.13-2: SJWD WATER SUPPLY

SUPPLY SOURCE	*2017*	*2018*	*2019*
Water Rights	33,000	33,000	33,000
Placer County Water Agency contract	20,300	17,000	10,000
Centeral Valley Project	24,200	3,000	3,000
Total Supply	**77,500**	**53,700**	**46,000**

SOURCE: SJWD 2018B

The District's water supply is anticipated to be 100 percent available through the planning period (see Table 3.13-3) for a normal water year (Folsom Reservoir storage above 950,000 AF). Although the District's Centeral Valley Project (CVP) supply is impacted by the CVP municipal and industrial water storage policy during drought years, CVP water supply will increase to 75% of full contract amount as the District's calculated historic demand increases.

TABLE 3.13-3: RETAIL AND WHOLESALE: WATER SUPPLIES - PROJECTED

WATER SUPPLY	*ADDITIONAL DETAIL ON WATER SUPPLY*	*PROJECTED WATER SUPPLY*				
		2020	*2025*	*2030*	*2035*	*2040*
Surface Water	USBR CVP Folsom Lake	24,200	24,200	24,200	24,200	24,200
Surface Water	Pre-1914 Right	33,000	33,000	33,000	33,000	33,000

2. UNITS ARE IN AFY

SOURCE: SJWD 2018B

GROUNDWATER

The groundwater basin underlying the region is located in the North American Subbasin, which is part of the larger Sacramento Valley Groundwater Basin (DWR Bulletin 118 DW, 2003). The North American subbasin comprises approximately 350,000 acres. The Sacramento Valley Groundwater Basin is not adjudicated (this is the process by which the rights of basin drafters are officially reviewed and declared by a judge or arbiter). "DWR Bulletin 118 does not specifically identify the sub-basin as being in overdraft, but does identify previous issues with groundwater levels. Groundwater management efforts by the region through Sacramento Groundwater Authority and other partnerships have improved and stabilized basin levels" (CHWD 2016). Under the Sustainable Groundwater Management Act of 2014 (SGMA) the assigned basin priority is medium/high, and therefore a groundwater sustainability plan must be adopted for the Sacramento Valley Groundwater Basin. As a result, there may be future changes to the management of the basin, the impacts of which cannot be forecast at this time.

The water-bearing deposits underlying the CHWD and SJWD include the Fair Oaks and Mehrten Formations. The Mehrten Formation is the most productive fresh water-bearing unit in the eastern

Sacramento Valley, though some of the permeable layers of the Fair Oaks Formation produce moderate amounts of water. Much of the recharge of these aquifer systems comes from the Sacramento and American Rivers and their tributaries where gravel deposits exist (CHWD 2016).

CHWD supplements its surface water supply with five groundwater wells; this provides additional capacity for CHWD to meet peaking, pressure, shortage, and emergency demands. During normal supply years, CHWD draws 900 acre-feet of groundwater to supplement surface water supply. CHWD's wells do not exhibit any water quality issues that impact its use as potable water supply or require treatment other than disinfection prior to service (CHWD 2016). Four of CHWD's groundwater wells are located within the City, with a fifth well located just south of the City limits. The CHWD groundwater system provides total well capacity of 6,750 gallons per minute (City of Citrus Heights 2011). Typically, as pressure decreases in the distribution pipeline system during peak demand conditions, CHWD wells start automatically.

Total usable capacity and safe yield of the basin have not yet been determined. Usable capacity is assumed to be the yield calculated in the DWR's American Basin Conjunctive Use Project Feasibility Study (1997). The study assumed a specific yield of 7 percent and an assumed thickness of 200 feet. Applying these assumptions to the total basin area results in a usable capacity of 70.2 million acre-feet. The Sacramento Groundwater Authority (SGA) has recently adopted a groundwater accounting framework. The framework allows for SGA member agencies to account for groundwater banking and conjunctive use efforts, and includes consideration and monitoring of groundwater levels. This information will be used to proactively manage the basin's storage capacity and available yield to support a conjunctive use strategy.

Table 3.13-4 identifies past volumes of groundwater extracted by CHWD between 2011 and 2015.

TABLE 3.13-4: HISTORICAL GROUNDWATER PUMPING 2011 - 2015

GROUNDWATER TYPE	*LOCATION OR BASIN NAME*	*2011*	*2012*	*2013*	*2014*	*2015*

SOURCE: CHWD 2015 UWMP, TABLE 6-1.

RECYCLED WATER SUPPLIES

CHWD does not use recycled water nor is recycled water available in the District's service area.

Supply and Demand Assessment in the 2015 UWMP

Normal year supply to demand projections are presented in Table 3.13-5. Projections indicate there is sufficient supply for the projected demands. The same supply availability is assumed for the single and multiple dry year scenarios. Projected demands during the dry year types are reduced 15 percent per the Water Forum Agreement. SJWD provided information to CHWD regarding surface water supply availability during each year type. Through 2035, SJWD projects they will have sufficient surface water supply if demands are reduced 15 percent during dry years per the Water Forum Agreement. CHWD will maintain a groundwater supply of up to 5,000 AFY through its groundwater system. CHWD assumes 900 AFY of groundwater from maintenance

pumping. Therefore, the surface water purchased from SJWD is set equal to the projected demands minus 900 AFY of CHWD-produced groundwater.

As indicated in Table 3.13-5, CHWD projects sufficient supplies during each dry year type. The groundwater supply, plus potential demand reductions during shortage periods, is assumed to provide sufficient reliability for these planning purposes.

TABLE 3.13-5: MULTIPLE DRY YEARS SUPPLY AND DEMAND COMPARISON IN FIVE-YEAR INCREMENTS (AFY)

		2020	*2025*	*2030*	*2035*	*2040*

REGULATORY SETTING - WATER SUPPLY

Senate Bill 610

Senate Bill (SB) 610 requires that public agencies in a position of approving certain projects check with the water agency proposed to serve the Plan Area to determine if there are sufficient water supplies available to accommodate the Specific Plan. SB 610 applies to projects that meet the following criteria:

- A proposed residential development of more than 500 dwelling units.
- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
- A proposed hotel or motel, or both, having more than 500 rooms.
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
- A mixed-use project that includes one or more of the projects specified above.
- A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

SB 610 amended Public Resources Code Section 21151.9 to provide that whenever a city or county decides that a project meets any of the above criteria, it must comply with Section 10910 *et seq.* of the Water Code. Section 10910 *et seq.* of the Water Code was also amended by SB 610 to require a city or county to coordinate the CEQA analysis with the water agency proposed to serve the project. Section 10910 *et seq*. requires a city or county to identify any public water system that

may supply water to a proposed project. The city or county must ask each of these water providers to indicate whether its "total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the Specific Plan, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses." If the city or county cannot receive this information from the water provider, it must provide the water supply assessment itself. It should be noted that the Specific Plan meets the above listed criteria (i.e. the Specific Plan has more than 500 dwelling units); therefore, SB 610 is applicable to the Specific Plan, and a Water Supply Assessment has been prepared (see Appendix H).

Sustainable Groundwater Management Act

The SGMA requires governments and water agencies of basins designated as high and medium priority basins to halt overdraft and develop sustainability plans to bring the basins into balanced levels of pumping and recharge within 20 years. The SGMA empowers local agencies to form Groundwater Sustainability Agencies (GSAs) to manage basins sustainably and requires those GSAs to adopt Groundwater Sustainability Plans (GSPs).

California Model Water Efficient Landscape Ordinance

The Water Conservation in Landscaping Act was enacted in 2006, requiring the DWR to update the Model Water Efficient Landscape Ordinance (MWELO). In 2009, the Office of Administrative Law (OAL) approved the updated MWELO, which required a retail water supplier or a county to adopt the provisions of the MWELO by January 1, 2010, or enact its own provisions equal to or more restrictive than the MWELO provisions.[1] Because the City of Citrus Heights is a "local agency" under the MWELO, it must require "project applicants" to prepare plans consistent with the requirements of MWELO for review and approval by the City.

The MWELO applies to new construction with a landscape area greater than 2,500 square feet. The MWELO "highly recommends" use of a dedicated landscape meter on landscape areas smaller than 5,000 square feet, and requires weather-based irrigation controllers or soil-moisture based controllers or other self-adjusting irrigation controllers for irrigation scheduling in all irrigation systems. The MWELO provides a methodology to calculate total water use based upon a given plant factor and irrigation efficiency.[2] Finally, the MWELO requires the landscape design plan to

[1] California Code of Regulations (CCR), Tit. 23, Div. 2, Ch. 27, Sec. 492.4. The MWELO provides the local agency discretion to calculate the landscape water budget assuming a portion of landscape demand is met by precipitation, which would further reduce the outdoor water budget. For purposes of the Water Supply Assessment, precipitation is not assumed to satisfy a portion of the outdoor landscape requirement because the determination of an appropriate effective precipitation factor is highly uncertain given the various landscape slopes, terrain composition, concurrent watering schedules, etc.

[2] In calculating Estimated Total Water Use, the MWELO requires use of at least a 71% irrigation efficiency factor. Assuming 71% irrigation efficiency, the average plant factor must be 0.50. It would be possible to stay within the water budget if the average plant factor were higher than 0.50 by designing a system with an irrigation efficiency higher than 71%. The relationship between a Plant Factor (PF) and Irrigation Efficiency (IE) in the Applied Water formula is: AW=(ETo*PF)/IE.

delineate hydrozones (based upon plant factors) and then to assign a unique valve for each hydrozone (low, medium, high water use).

City of Citrus Heights General Plan

The City of Citrus Heights General Plan contains the following goals and policies that are relevant to water supply:

COMMUNITY HEALTH ELEMENT

Goal 57: Provide for the timely development of public facilities and programs and the maintenance of service levels for these facilities and programs.

> **Policy 57.1:** Require new development that generates the need for new public facilities to fund its fair share of construction of those facilities.
>
> **Policy 57.2:** Ensure that service demands created by new development do not erode existing service levels.
>
> **Policy 57.3:** Ensure through the development review process that adequate public facilities and services are available to serve new development. The City shall not approve new development where existing facilities are inadequate unless:
>
> - The applicant can demonstrate that all necessary public facilities will be installed or adequately financed (through fees or other means); and
> - The facility improvements are consistent with applicable Facility Master Plans adopted by the City.

Goal 62: Facilitate a safe and abundant water supply and efficient wastewater collection, treatment and disposal system.

> **Policy 62.1:** Ensure that adequate water supply and distribution facilities are available to serve the community.

City of Citrus Heights Municipal Code

Section 106.34.60, Water Efficient Landscaping, of the Citrus Heights Municipal Code ensures efficient water use by establishing standards for landscape design appropriate to Citrus Heights' climate, soils, water resources and land uses. This section of the code requires new construction projects with a landscape greater than 500 square feet and all rehabilitated landscapes with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check or design review to, among other requirements, implement a water-efficient system. This section applies to all applications that are subject to Design Review in compliance with Section 106.62.040 of the Code, except as provided in Section 106.34.060(B).

CHWD 2015 Urban Water Management Plan

The purpose of the 2015 UWMP is to ensure efficient use of urban water supplies in the CHWD service area and promote conservation. The UWMP discusses not only the availability of water but

also water use, reclamation, and water conservation activities. The UWMP complies with the Urban Water Management Planning Act (California Water Code [CWC] Section 10610 et seq.), the Water Conservation Act of 2009 (CWC Section 10608), and the 20x2020 Water Conservation Plan, which are being implemented by the California Department of Water Resources (DWR).

THRESHOLDS OF SIGNIFICANCE - WATER SUPPLY

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on the environment associated with Utilities if it will:

- Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects; and/or
- Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.

IMPACTS AND MITIGATION MEASURES

Impact 3.13-3: Specific Plan implementation has the potential to require the relocation or construction of new water facilities or expansion of existing facilities, the construction or relocation of which could cause significant environmental effects (Less than Significant)

The Sunrise Tomorrow Specific Plan would require extension of offsite water infrastructure to the Plan Area for potable water. Offsite improvements include connection to the existing facilities at roadways adjacent to the Specific Plan Area, including along Sunrise Boulevard and Greenback Lane.

The proposed Specific Plan would require the construction of new water lines to accommodate the proposed development and be required to ensure adequate water lines, hydrants, and pressure are provided. The proposed on-site water distribution system would be looped to maintain water quality and would be sized to meet the maximum day demand plus fire flow. CHWD anticipates it would have sufficient capacity to provide adequate water system flow and pressure for water demand, without requiring construction of new off-site infrastructure.

With the proposed Specific Plan Maximum Development conditions, needs for water laterals and fire service piping and appurtenances would increase significantly from the existing condition(s). Future building additions and increased use in this area would include residential, office, and hotels, as well as restaurants, retail, and indoor/ outdoor entertainment uses. Domestic water pressures on-site would have to meet minimum requirements for CHWD residential/commercial/retail needs. This pertains specifically to construction and emergency backup uses. The project plans would be required to be reviewed by a Sacramento Metropolitan Fire (SMF) representative to provide comment on changes needed to the site plan, if any, for safety compliance. This would include roadway widths and acceptance of clearances for truck turns as well as placement, spacing maximums, and connections of above ground fire appurtenances (fire department connections, check valves, post indicator valves, etc.). The increased number of tenants and overall use of the site could require needs for pressure increases

on-site, based on any direction given by SMF. Based on the Maximum Development scenario, most of all the existing water mains would need to be removed, reconfigured, and replaced (mostly) in kind. Each new water main service lateral would be designed based on CHWD standards and direction based on the building's size. New piping would need to be configured to meet clearance requirements (both vertical and horizontal) at any public and/or private utility crossings (per Title 22, California Code of Regulations for new construction).

CONCLUSION

The proposed Specific Plan would require the construction of new water facilities and the expansion of existing water facilities into the Plan Area, the construction or relocation of which could cause significant environmental effects. Potential environmental impacts associated with implementation of the proposed Specific Plan, which includes water infrastructure to serve the potential development, have been analyzed and identified throughout this EIR. In some cases, the direct and indirect impacts are potentially significant and warrant mitigation measures, while in other cases there are significant and unavoidable impacts. The installation of new water facilities for the Sunrise Tomorrow Specific Plan does not cause any impacts above what is already analyzed and disclosed for each environmental topic in this EIR. This is a ***less than significant*** impact relative to this environmental question.

Impact 3.13-4: Specific Plan implementation has the potential to have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years (Less than Significant)

PROJECT WATER DEMAND

The projected water demand for the proposed Specific Plan is based on the calculations described in the WSA developed by West Yost for the Sunrise Tomorrow Specific Plan Area.

The total water demand for the Specific Plan is summarized below in Table 3.13-6. Potable water was assumed to be used to meet all the proposed Specific Plan's water demands. This is because the District does not have any recycled water supplies.

As shown, projected water demands for the proposed Specific Plan total approximately 316 acre-feet per year (af/yr), which accounts for approximately 25 af/yr associated with existing on-site uses, which would be demolished.

TABLE 3.13-6: PROPOSED PROJECT WATER DEMAND SUMMARY (AFY)

LAND USE	*DWELLING UNITS*	*APPROXIMATE AREA (ACRES)*	*WATER USE FACTOR (AFY)*	*POTABLE WATER DEMAND (AFY)*
Commercial	--	34.20	1.25	42.75
Mixed-Use	--	15.10	1.25	18.88
Residential	2,200	15.10	0.12	266.40
Open Space	--	9.10	1.25	11.38
Other (Transit Center)	--	0.80	1.25	1.00
Streets	--	22.10	0.00	0.00
Subtotal	--	--	--	*340.40*
Demolition	--	--	--	24.87
Total	**--**	**96.80**	**--**	**315.53**

SOURCES: WEST YOST SUNRISE TOMORROW SPECIFIC PLAN WSA 2020.

Table 3.13-5 summarizes the projected availability of the District's existing and planned future potable water supplies and the District's projected water demands in normal, single dry and multiple dry years through buildout. Under all hydrologic condition projections, there is an insufficient supply for the total water demands the same supply availability is assumed for the single and multiple dry year scenarios. Projected demands during the dry year types are reduced 15 percent per the Water Forum Agreement. According to the WSA, water demand within the District's service area is expected to exceed the District's supplies by a small amount (less than 2.5 percent) under any hydrologic condition if the City is able to fully implement the Proposed Specific Plan. However, SJWD provided information to the District regarding surface water supply availability during each year type. Through 2040, SJWD projects they will have sufficient surface water supply if demands are reduced 15 percent during dry years per the Water Forum Agreement. The District will maintain a groundwater supply of up to 5,000 AFY through the its groundwater system. CHWD assumes 900 AFY of groundwater from maintenance pumping. Therefore, the surface water purchased from SJWD is set equal to the projected demands minus 900 AFY of the District produced groundwater.

Projected potable water demands for buildout of the Proposed Project total approximately 316 AFY. As indicated in the tables, the District projects sufficient supplies during each dry year type. It is anticipated that the proposed Specific Plan, if approved by the City, would be served from the District's existing and future portfolio of water supplies. The District's existing and additional planned future water supplies are sufficient to meet the District's existing water demands, including those future water demands associated with the Specific Plan. The groundwater supply, plus potential demand reductions during shortage periods, is assumed to provide sufficient reliability for these planning purposes.

CONCLUSION

Water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with the Sunrise Tomorrow Specific Plan, to the year 2040 under all hydrologic conditions. The CHWD has sufficient water supply

throughout its service area to serve the proposed Specific Plan. Therefore, overall, buildout of the Sunrise Tomorrow Specific Plan would result in a ***less than significant*** impact relative to this topic.

3.13.3 SOLID WASTE

EXISTING SETTING

According to the California Department of Resources Recycling and Recovery (CalRecycle), in 2019, Citrus Heights disposed of approximately 47,559 tons of solid waste. Republic Services (formerly Allied Waste Services) provides solid waste and recycling collection services to the City. Solid waste is transported to the Kiefer Landfill, near the intersection of Grant Line Road and Kiefer Boulevard.

Sacramento County owns and operates the Kiefer Landfill, and the landfill is the primary solid waste disposal facility in the County. Kiefer Landfill is a total of 1,084 acres in size, with a permitted disposal area of 660 acres. Kiefer Landfill is classified as a Class III municipal solid waste landfill facility and is permitted to accept general residential, commercial, and industrial refuse for disposal, including municipal solid waste, construction and demolition debris, green materials, agricultural debris, and other nonhazardous designated debris.

The landfill is permitted to accept a maximum of 10,800 tons per day of solid waste; however, the average intake is approximately 6,000 tons per day. The Kiefer Landfill receives over 700,000 tons of waste per year. The site currently has a permitted capacity of approximately 117 million cubic yards and a remaining capacity of 113 million cubic yards. Currently, the landfill is operating below permitted capacity, and the closure date of the Kiefer Landfill is anticipated to be approximately 2064.

CalRecycle provides an average per-capita solid waste disposal rate for residents and business. In Citrus Heights, CalRecycle identified solid waste disposal rates of 3.0 tons per resident per year and 14.8 tons per employee per year in 2019 (CalRecycle Jurisdiction Diversion/Disposal Rate Summary, 2019).

The California Integrated Waste Management Act (CIWMA) of 1989, also commonly known as Assembly Bill (AB) 939, requires local agencies to implement source reduction, recycling, and composting (see discussion under “Regulatory Setting” below). The Sacramento County Integrated Waste Management Plan, adopted in March 1996, consists of a siting element, summary plan, source reduction and recycling, household hazardous wastes, and non-disposal facility elements. The Countywide Integrated Waste Management Plan requires recycling programs that are expected to result in a 50% diversion away from landfills, thereby extending the life of landfills.

To comply with the CIWMA, the City adopted the Business and Multi-Family Recycling and Organics Recycling Ordinance (Article IV, Chapter 74) in May 2016. The ordinance requires businesses and multifamily residential properties with 5 or more units that generate four or more cubic yards per week of solid waste to implement an on-site recycling program. The program requires businesses and multifamily residential properties to keep recyclable materials separate from all other solid waste, to provide signs and labeled containers for the storage and collection of recyclable materials, and to either self-haul or enter into a written service agreement with a franchise hauler (i.e., Republic Services, Atlas Disposal Industries, or Waste Management of Sacramento) for the collection and subsequent delivery of recyclable materials to an authorized recycling facility. Businesses and

multifamily residential property owners and operators must prepare a recycling plan that provides information on the types of on-site recyclable materials and verifies that labeled containers, signs, and a disposal service are available to ensure compliance with the ordinance.

REGULATORY SETTING - SOLID WASTE

California's Integrated Waste Management Act of 1989 (AB 939)

California's Integrated Waste Management Act of 1989 (AB 939) set a requirement for cities and counties to divert 50 percent of all solid waste from landfills by January 1, 2000, through source reduction, recycling and composting. In order to achieve this goal, AB 939 requires that each City and County prepare and submit a Source Reduction and Recycling Element. AB 939 also established the goal for all California counties to provide at least 15 years of ongoing landfill capacity.

AB 939 also established requirements for cities and counties to develop and implement plans for the safe management of household hazardous wastes. In order to achieve this goal, AB 939 requires that each city and county prepare and submit a Household Hazardous Waste Element.

75 Percent Solid Waste Diversion

AB 341 requires CalRecycle to issue a report to the Legislature that includes strategies and recommendations that would enable the state to recycle 75 percent of the solid waste generated in the state by January 1, 2020, requires businesses that meet specified thresholds in the bill to arrange for recycling services by July 1, 2012, and also streamlines various regulatory processes.

Construction and Demolition Waste Materials Diversion

Senate Bill 1374 (SB 1374), Construction and Demolition Waste Materials Diversion Requirements, requires that jurisdictions summarize their progress realized in diverting construction and demolition waste from the waste stream in their annual AB 939 reports. SB 1374 required the California Integrated Waste Management Board (CIWMB, which is now CalRecycle) to adopt a model construction and demolition ordinance for voluntary implementation by local jurisdictions.

California Green Building Standards Code (CALGreen)

CALGreen requires the diversion of at least 50 percent of the construction waste generated during most new construction projects (CALGreen Sections 4.408 and 5.408) and some additions and alterations to nonresidential building projects (CALGreen Section 5.713).

State Water Resources Control Board Resolution 2015-0019

In 2015, the State of California, through its State Water Resources Control Board, issued Resolution No. 2015-0019, referred to as the Trash Amendments. The Trash Amendments directed the individual RWQCBs to implement a statewide mandate requiring the control, collection, and disposal of solid waste larger than 5 millimeters in size (excluding green and hazardous wastes) from the right-of-way prior to entering surface waters.

For all MS4 Permittees regulated by this Order, the Central Valley Water Board intends to Issue orders pursuant to Water Code section 13267 or 13383 requiring each NPDES Permittee to submit, written notice to the Central Valley Water Board selecting from the Trash Amendments' two methods of compliance.

City of Citrus Heights Municipal Code

Chapter 74 of the City's Municipal Code establishes the standards and regulations governing refuse generation, storage, recovery, accumulation, collection, transportation, disposal sanitation, and recycling within the City.

City of Citrus Heights General Plan

The Citrus Heights General Plan contains the following goal and policies that are relevant to solid waste disposal and recycling:

COMMUNITY HEALTH ELEMENT

Goal NR.8: Create an integrated, community-wide strategy to ensure efficient solid waste disposal by reducing waste volumes through recycling and other methods.

> **Policy 63.1:** Continue to reduce solid waste through source reduction, curbside recycling, green waste collection, and recovery. Progress toward becoming a low-waste generating community.
>
> **Policy 63.5:** Develop effective and efficient recycling programs for multifamily developments and businesses.
>
> **Policy 63.7:** Encourage contractors hired by the City to use recycled materials.
>
> **Policy 63.8:** Use recyclable material in City facilities, projects and programs to the maximum extent feasible.

THRESHOLDS OF SIGNIFICANCE - SOLID WASTE

Consistent with Appendix G of the CEQA Guidelines, the Specific Plan will have a significant impact on the environment associated with Utilities if it will:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; and/or
- Not comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

IMPACTS AND MITIGATION MEASURES

Impact 3.13-5: Specific Plan implementation would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (Less than Significant)

Republic Services (formerly Allied Waste Services) provides solid waste and recycling collection services to the City and it is anticipated that Kiefer Landfill would provide landfill capacity for the proposed Specific Plan. As stated, the landfill is permitted to accept a maximum of 10,800 tons per day of solid waste and currently has an average intake of approximately 6,000 tons per day. The landfill has a remaining capacity of 113 million cubic yards and is currently operating below permitted capacity with an anticipated closure date of approximately 2064.

The addition of the volume of solid waste associated with the Sunrise Tomorrow Specific Plan to the landfill would not exceed the landfill's remaining capacity.

Based on the waste generation factors provided by CalRecycle, the proposed specific plan is expected to generate approximately 33,990 pounds per day of solid waste upon full buildout, which is equivalent to 17 tons per day; refer to Table 3.13-7. This represents approximately 0.28 percent of the maximum daily capacity permitted for disposal and approximately 0.03 percent of the landfills remaining capacity.

TABLE 3.13.3-7: ESTIMATED SOLID WASTE GENERATION

LAND USE	*GENERATION FACTOR[1]*	*SPECIFIC PLAN MAXIMUM DEVELOPMENT*	*ESTIMATED SOLID WASTE GENERATION (LB./DAY)*
Retail/Services	6 lb./1,000 s.f./day	320,000 s.f.	1,920
Residential	10 lb./unit/day	2,220 units	22,200
Hotel	2 lb./room/day	480 rooms	960
Office	6 lb./1,000 s.f./day	960,000 s.f.	5,760
Institutional	0.007 lb./s.f/day	450,000 s.f.	3,150
		TOTAL	**33,990**

[1] CALRECYCLE 2019

CONCLUSION

The Sunrise Tomorrow Specific Plan would be required to comply with applicable State and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. The addition of the volume of solid waste associated with the Sunrise Tomorrow Specific Plan, approximately 17 tons per day at total buildout, would increase the total to the Kiefer Landfill; however, this increase would not cause an exceedance of the landfill's remaining capacity. Therefore, the proposed Specific Plan would not generate solid waste in excess of the capacity of

local infrastructure, or otherwise impair the attainment of solid waste goals, or exceed any State or local standards associated with solid waste. This is a ***less than significant*** impact.

The California Environmental Quality Act (CEQA) requires an Environmental Impact Report (EIR) to evaluate a project's effect in relationship to broader changes occurring, or that are foreseeable to occur, in the surrounding environment. Accordingly, this chapter presents a discussion of CEQA-mandated analysis for cumulative impacts, significant irreversible effects, and significant and unavoidable impacts associated with the Sunrise Tomorrow Specific Plan. Growth inducement is discussed in Section 3.10, Population and Housing.

4.1 CUMULATIVE SETTING AND IMPACT ANALYSIS

INTRODUCTION

CEQA requires that an EIR contain an assessment of the cumulative impacts that could be associated with the Sunrise Tomorrow Specific Plan. According to CEQA Guidelines Section 15130(a), "an EIR shall discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable." "Cumulatively considerable," as defined in section 15065(a)(3), means that "the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects" (as defined by Section 15130). As defined in CEQA Guidelines Section 15355, a cumulative impact consists of an impact that is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. A cumulative impact occurs from:

> *…the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.*

In addition, Section 15130(b) identifies that the following three elements are necessary for an adequate cumulative analysis:

1) Either:

(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency; or,

(B) A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program.

Any such planning document shall be referenced and made available to the public at a location specified by the lead agency.

2) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available; and

3) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but shall briefly describe its basis for concluding that the incremental effect is not cumulatively considerable.

CUMULATIVE SETTING

The cumulative setting uses growth projections listed in the City of Citrus Heights General Plan, the General Plan Final EIR as a basis for cumulative growth.

The Citrus Heights General Plan (2011) and General Plan Program EIR analyzed impacts to population and housing and found that future development resulting from implementation of the General Plan would result in a less than significant impact related to substantial population and housing unit growth over existing conditions. At the time the City of Citrus Heights General Plan was adopted in 2011, the City was approximately 98 percent built out with only 2 percent of vacant land remaining, including 149-acres for residential land uses and 46 for commercial land uses. The Citrus Heights General Plan EIR estimated that development of the 149-acres designated for residential uses would result in 3,577 additional housing units for a total of 39,278 units by 2035. The Citrus Heights General Plan EIR also noted that future land uses would result in a population increase of approximately 15,880 persons by 2035 for a total population of 100,480. It is noted that the actual unit count and population growth associated with the 149 acres of land designated for residential land uses is below the numbers assumed in the General Plan EIR. While the General Plan has been amended from time to time, the amendments have not required any amendments to the General Plan EIR, nor have any supplemental or subsequent EIRs been required to address changes to the General Plan. The General Plan EIR is an appropriate document to address the Specific Plan's contribution to cumulative impacts in the context of the General Plan's contribution to cumulative impacts, as provided by CEQA Guidelines Section 15130(b)(1)(B).

As part of the Sacramento Region Blueprint process, the Sacramento Area Council of Governments (SACOG) produced regional growth projections through 2040. The City is projected to have approximately 37,090 housing units and 23,920 employees by 2040. The 2020 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) adopted by SACOG in November 2019 projects that Citrus Heights will have 25,820 jobs and 40,650 housing units at total buildout.

CUMULATIVE EFFECTS OF THE PROJECT

Cumulative settings are identified under each cumulative impact analysis. Cumulative settings vary because the area that the impact may affect is different. For example, noise impacts generally only impact the local surrounding area because noise travels a relatively short distance while air quality impacts affect the whole air basin as wind currents control air flow and are not generally affected by natural or manmade barriers which would affect noise. Cumulative Specific Plan impacts were addressed throughout each Chapter 3.0 section, and are summarized below.

Method of Analysis

Although the environmental effects of an individual project may not be significant when that project is considered separately, the combined effects of several projects may be significant when considered collectively. State CEQA Guidelines 15130 requires a reasonable analysis of a project's cumulative impacts, which are defined as "two or more individual effects which, when considered together are considerable or which compound or increase other environmental impacts." The cumulative impact that results from several closely related projects is: the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time (State CEQA Guidelines 15355[b]). Cumulative impact analysis may be less detailed than the analysis of the project's individual effects (State CEQA Guidelines 15130[b]).

There are two approaches to identifying cumulative projects and the associated impacts. The list approach identifies individual projects known to be occurring or proposed in the surrounding area in order to identify potential cumulative impacts. The projection approach identifies potential cumulative impacts through the use of a summary of projections found in adopted local, regional or statewide plans (e.g., General Plans) or related planning or environmental documents as sometimes supplemented by additional information such as a regional modeling program. These two approaches may also be combined. (See *South of Market Community Action Network v. City and County of San Francisco* (2019) 33 Cal.App.5th 321, 337.) This EIR uses the projection approach for the cumulative analysis and considers the development anticipated to occur upon General Plan buildout in the area in addition to the pending and proposed projects in the area.

Project Assumptions

The Sunrise Tomorrow Specific Plan contribution to environmental impacts under cumulative conditions is based on full buildout of the Plan Area. See Chapter 2.0, Project Description, for a complete description of the Sunrise Tomorrow Specific Plan.

Cumulative Impacts

Some cumulative impacts for issue areas are not quantifiable and are therefore discussed in general terms as they pertain to development patterns in the surrounding region. Exceptions to this are topics like traffic and air quality, which may be quantified by estimating future traffic patterns, pollutant emitters, etc. and determining the combined effects that may result. The

potential cumulative impacts associated with the Sunrise Tomorrow Specific Plan are summarized below.

AESTHETICS AND VISUAL RESOURCES

The cumulative setting for aesthetics is the Citrus Heights Planning Area, as defined in the City of Citrus Heights General Plan.

Impact 4.1: Specific Plan implementation may contribute to the cumulative degradation of the existing visual character of the region (Less than Significant and Less than Cumulatively Considerable)

Under cumulative conditions, buildout of the Citrus Heights General Plan would result in changes to the visual character of the Citrus Heights General Plan Planning Area and result in impacts to localized views as new development occurs within the City and the General Plan Planning Area.

As described in Section 3.1, Aesthetics and Visual Resources, no part of Plan Area is designated as a scenic vista by the City of Citrus Heights General Plan, nor does the Plan Area contain any unique or distinguishing features that would qualify it for designation as a scenic vista. Furthermore, there are no designated or eligible State Scenic Highways within or in the vicinity of the Specific Plan Area and no highways in Sacramento County are listed as a Designated Scenic Highway by the Caltrans Scenic Highway Mapping System.

The Plan Area is located in an urbanized area and is currently developed with the Sunrise Mall. While future development consistent with the proposed Specific Plan would change and alter the existing visual character of the Plan Area, these changes would not degrade the visual quality of the site or the surrounding areas. The Specific Plan would result in the redevelopment of the mall site, which would contribute to changes in the regional landscape and visual character of the area. In order to reduce visual impacts, development within the Plan Area would be required to be consistent with the General Plan and the Municipal Code, which include design standards in order to ensure quality and cohesive design of the Plan Area. As noted in section 3.1, the proposed Development Standards, Street Design Standards, and Open Space Design Standards are intended to reflect the City's desires relative to land planning, as well as individual site design and architecture. The guidelines and standards set forth in the Specific Plan are applicable to all future development in the Plan Area and cover a wide range of topics from general circulation and Specific Plan signage to landscaping and sustainable development. Therefore, the proposed Specific Plan's incremental contribution towards cumulative aesthetic impacts would be ***less than significant*** and ***less than cumulatively considerable*****.**

AIR QUALITY

The cumulative setting for this analysis is the Sacramento Valley Air Basin (SVAB). The SVAB encompasses eleven counties including all of Shasta, Tehama, Glenn, Colusa, Butte, Sutter, Yuba, Sacramento, and Yolo Counties, the westernmost portion of Placer County and the northeastern half of Solano County. The SVAB is the northern half of California's Great Valley and is bordered on three sides (west, north, and east) by mountain ranges, with peaks in the eastern range above

9,000 feet. The SVAB is bounded by the North Coast Ranges on the west and Northern Sierra Nevada Mountains on the east.

Impact 4.2: Cumulative impact on the region's air quality (Cumulatively Considerable and Significant and Unavoidable)

Air districts develop region-specific CEQA thresholds of significance in consideration of existing air quality concentrations and attainment or nonattainment designations under the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS). The NAAQS and CAAQS are informed by a wide range of scientific evidence that demonstrates there are known safe concentrations of criteria pollutants. In recognizing that air quality is cumulative problem, air districts typically consider projects that generate criteria pollutant and ozone precursor emissions below these thresholds to be minor in nature and would not adversely affect air quality such that the NAAQS or CAAQS would be exceeded, both on an individual project and cumulative level. Therefore, a project that would exceed such thresholds would generate a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment.

In accordance with Sacramento Metropolitan Air Quality Management District's (SMAQMD's) methodology, any project that produces a significant project-level regional air quality impact in an area that is in nonattainment contributes to the cumulative impact. Cumulative projects within the local area include new development and general growth within the Plan Area. The greatest source of emissions within the SVAB is mobile sources. Due to the extent of the area potentially impacted from cumulative project emissions (i.e., the SVAB); SMAQMD considers a project cumulatively significant when project-related emissions exceed the SMAQMD's regional emissions thresholds.

Sacramento County has a state designation of Nonattainment for ozone and PM_{10}, and a state designation of either Unclassified or Attainment for all other criteria pollutants. Sacramento County has a national designation of Nonattainment for ozone and $PM_{2.5}$ and a national designation of either Attainment or Unclassified for all other criteria pollutants. Construction of cumulative projects will further degrade the regional and local air quality. Air quality will be temporarily impacted during construction activities. As shown in Table 3.2-13 in Section 3.2, construction emissions associated with the proposed Plan would not be expected to contribute a significant level of air pollution such that regional air quality within the SVAB would be degraded. Furthermore, implementation of the SMAQMD construction-related best management practices (as required) would ensure that project-related construction emissions during the construction timeframe and emissions would be below SMAQMD thresholds. Thus, the Specific Plan's contribution to cumulative air quality impacts would be ***less then significant*** and ***less than cumulatively considerable***.

For operational air quality emissions, any project that does not exceed or can be mitigated to less than the daily regional threshold values is not considered by the SMAQMD to be a substantial source of air pollution and does not add significantly to a cumulative impact. The planned improvements, and goals and policies under the proposed Specific Plan would generally support a more sustainable development pattern for the Plan Area. Creation of more complete neighborhoods in addition to improving the public transit, pedestrian, and bicycle networks and

infrastructure would contribute to the overall reduction in vehicle trips and vehicle-miles-traveled (VMT), which would reduce mobile-source emissions. However, as shown in Tables 3.2-10 through 3.2-12 in Section 3.2, even with implementation of all feasible mitigation, the proposed Specific Plan would not achieve the reductions required for reactive organic compounds (ROG), oxides of nitrogen (NO_x), and particulate matter 10 micrometers or less in diameter (known as respirable particulate matter). Thus, the proposed Specific Plan's air pollutant emissions would be ***cumulatively considerable*** and a ***significant and unavoidable cumulative impact***.

Altogether, the mitigation measures provided within the air quality discussion (refer to Section 3.2) have been designed to be consistent with the guidance as promulgated by the SMAQMD, where applicable. However, even with the application of mitigation measures, operational emissions levels for the aforementioned criteria pollutants would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. As such, implementation of the Specific Plan would have a ***cumulatively considerable contribution*** and a ***significant and unavoidable cumulative impact*** on the region's air quality.

CULTURAL AND TRIBAL RESOURCES

The cumulative context for a cumulative analysis can be defined by region, by political subdivision or by the geography, where sufficient inventory data is available to define it. The cumulative setting for cultural resources includes all of the Sacramento County, which includes the entire Citrus Heights Planning Area. There are extensive cultural sites located in Sacramento County and in the region as a whole. Generally, these sites are related to Native Americans who historically have lived in the area; however, there are also numerous historical resources such as nearby ranches. Sacramento County was chosen as the cumulative context for this analysis because it encompasses an extensive set of cultural resources potentially present over a wide geographic area. Discovery of cultural resources have the potential to be interlinked; that is, knowledge of cultural resources in one part of Sacramento County has the potential to affect cultural resources in other parts of Sacramento County.

Impact 4.3: Cumulative impacts on known and undiscovered cultural resources (Less than Cumulatively Considerable)

While there are extensive documented cultural resources in Citrus Heights and unincorporated Sacramento County, there are no cultural resources that were found during field surveys for the proposed Specific Plan. Additionally, there are no cultural resources that have been identified in the Specific Plan Area on maps and files maintained by the North Central Information Center (NCIC). There are no recorded resources within the Plan Area, or within the search radius. There is one survey of all historical resources in Citrus Heights conducted in 2006; the boundaries of the study area for this report is shown to have included the Plan Area. Four other surveys have been conducted at least partially within the Plan Area radius, with no sites recorded. The National Register of Historic Resources does not list any cultural resources in the Specific Plan Area. Furthermore, mitigation measures incorporated into this EIR would require the proposed Specific Plan to evaluate any cultural resources discovered during construction activities. Any significant

discoveries during construction would be required to be preserved in place or mitigated through relocation or documentation; and the Specific Plan is not anticipated to considerably contribute to a significant reduction in cultural resources.

Absent any evidence of a cultural resource in the Specific Plan Area, the potential for an impact is considered relatively low. Mitigation measures are presented that would require practices that would alleviate any impact associated with a cultural find during construction activities that was previously unknown. Given this fact, the probability of uncovering a cultural resource during construction is considered relatively low.

However, the cumulative setting is regional in scope and includes extensive cultural sites. Although the Specific Plan Area has been evaluated and has not been found to contain any evidence of cultural resources, implementation of the proposed Specific Plan, when taken together with all past, present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), has the potential to cause a significant cumulative impact. Even so, the incremental contribution of the proposed Specific Plan to this larger significant cumulative impact would not be cumulatively considerable. Thus, implementation of the proposed Specific Plan would have a ***less than cumulatively considerable*** incremental contribution to the significant cumulative impacts on cultural resources.

GREENHOUSE GASES AND CLIMATE CHANGE

As the California Supreme Court has emphasized, all CEQA analyses of the environmental effects of greenhouse gas (GHG) emissions are inherently cumulative in character. "[B]ecause of the global scale of climate change, any one project's contribution is unlikely to be significant by itself. […] 'With respect to climate change, an individual project's emissions will most likely not have any appreciable impact on the global problem by themselves, but they will contribute to the significant cumulative impact caused by greenhouse gas emissions from other sources around the globe. The question therefore becomes whether the project's incremental addition of greenhouse gases is 'cumulatively considerable' in light of the global problem, and thus significant.'" (*Center for Biological Diversity v. California Department of Fish and Wildlife* (2015) 62 Cal.4th 204, 219, quoting Crockett, *Addressing the Significance of Greenhouse Gas Emissions Under CEQA: California's Search for Regulatory Certainty in an Uncertain World* (July 2011) 4 Golden Gate U. Envtl. L.J. 203, 207–208.) Thus, the analysis below considers the entire planet as a backdrop while focusing on whether the proposed Specific Plan's incremental contribution to worldwide GHG emissions is cumulatively considerable.

Impact 4.4: Cumulative impact on climate change from increased project-related greenhouse gas emissions (Cumulatively Considerable and Significant and Unavoidable)

GHG emissions from a single project will not cause global climate change; however, GHG emission from multiple projects throughout a region or state could result in a cumulative impact with respect to global climate change.

In California, there has been extensive legislation passed with the goal of reducing GHG emissions. The legislative goals are as follows: 1) 1990 levels by 2020 and 2) 40% below 1990 levels by 2030. An additional goal -- 80% below the 1990 levels by the year 2050 – was set by Governor Schwarzenegger through Executive Order S-03-05. An even more ambitious goal of achieving carbon neutrality "as soon as possible, and no later than 2045," was set by Governor Brown through Executive Order B-55-18. To achieve these legislative and executive goals, the California Air Resources Board (CARB) has developed regional GHG emission reduction targets for the automobile and light truck sectors (the largest single source of GHG emissions) for 2020 and 2040. The regional GHG emission reduction targets for each region in California were established by the CARB.

As described in Impact 3.4-2, implementation of the proposed Specific Plan will still generate GHG emissions that would not otherwise exist without the proposed Specific Plan. Given the length of construction activities for a project of this size, the construction emissions would be a maximum annual release of approximately 2,744 metric tons of carbon dioxide equivalent (MT CO2e). The operational emissions would be a long-term release totaling approximately 35,264 MT CO_2e without any mitigation incorporated and 21,056 MT CO_2e with mitigation incorporated into the proposed plan (as provided by CalEEMod). The City of Citrus Heights must weigh the economic and social benefits of development against the environment impacts associated with development. The City of Citrus Height's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The use of New Urbanism principles, which emphasize compact, walkable communities, and which were incorporated into the design of the proposed plan, would help minimize GHG emissions generated by the proposed Specific Plan. Further, the proposed plan would be required to implement mitigation measures that are intended to reduce GHG emissions to the maximum extent feasible. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with Assembly Bill (AB) 32 and Senate Bill 32. These types of statewide measures will benefit the proposed Specific Plan (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. On a project-by-project case, the City of Citrus Heights evaluates a project and the potential to impose project-specific mitigation, which has been done through this GHG analysis. However, because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a ***cumulatively considerable contribution*** and ***significant and unavoidable*** impact to GHGs.

HAZARDS AND HAZARDOUS MATERIALS

The cumulative context for a cumulative analysis can be defined by region, by political subdivision or by the geography, where sufficient inventory data is available to define it. The cumulative context for the analysis of cumulative hazards and human health impacts is all of Sacramento

County, which includes the entire Citrus Heights Planning Area. This geographic and political extent was chosen because it encompasses hazards potentially present over a wide geographic extent (i.e., it covers both local and regional hazards). For example, smaller-scale local hazards, such as the use of hazardous materials during construction and potential contamination, are generally site specific, whereas more regional hazard topic areas, such as implementation of emergency response or emergency evacuation plans, may cover geographic areas beyond the areas that are within the direct land use authority of a local jurisdiction, and are normally coordinated between varied city and county functions.

Impact 4.5: Cumulative impact related to hazards and hazardous materials (Less than Significant and Less than Cumulatively Considerable)

Cumulative development within the region is expected to include buildout of the various General Plans within Sacramento County. The Sunrise Tomorrow Specific Plan, in conjunction with cumulative development in the region, includes areas designated for development of a variety of urban uses as defined by the applicable General Plans. Cumulative development would include continued operation of existing developed area and development of new facilities as allowed under each land use designation.

New development would inevitably increase the use of some hazardous materials within the region, resulting in potential health and safety effects related to hazardous materials use. Any use of hazardous materials must be managed in accordance with federal, State, and local (including Sacramento County) regulations to minimize any risk.

For the most part, potential risks from hazardous materials associated with new and future development would be confined to commercial areas. There are no specific commercial users that are proposed with the Sunrise Tomorrow Specific Plan that would pose a risk related to hazardous materials. Specific users would be required to obtain a conditional use permit, which would allow the City to evaluate any use of hazardous materials in their business operations before the use is approved.

Hazardous materials incidents, if any, are typically site-specific and involve accidental spills or inadvertent releases. Associated health and safety risks generally are limited to those individuals using the materials or to persons in the immediate vicinity of the materials. Hazard-related impacts tend to be site-specific and project-specific.

The proposed Specific Plan includes the approval and subsequent implementation of an approximately 95.8-acre Specific Plan area that includes residential, office, commercial, small parks, public/semipublic uses, and open space. These uses are not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The proposed Specific Plan land uses are not expected to emit hazardous emissions or handle hazardous or acutely hazardous materials,

substances, or waste. Mitigation measures have been included to minimize the risk of on-site hazards.

The proposed Specific Plan, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), would not be expected to cause any significant cumulative impacts. The proposed Specific Plan would not have cumulatively considerable impacts associated with hazards and hazardous materials. As such, implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** contribution to hazards and hazardous materials.

HYDROLOGY AND WATER QUALITY

The cumulative context for a cumulative analysis can be defined by region, by political subdivision or by the geography. The cumulative context for the analysis of cumulative stormwater runoff and flooding impacts is best addressed on a regional/watershed basis (geography). Because water resources are highly interconnected, the cumulative setting is based on Sacramento County which is located in the Sacramento River Hydrological Region. Cumulative development in this region, including the proposed Specific Plan, would impact the water quality and hydrological features of the Sacramento River Hydrologic Region. The City of Citrus Heights and much of the surrounding area is located in the Sacramento Valley Groundwater Basin. The Plan Area is located within the Valley-American Hydrologic Unit. And the Coon American Area and Lower American Sub-area.

Impact 4.6: Cumulative increases in peak stormwater runoff from the plan area (Less than Significant and Less than Cumulatively Considerable)

Implementation of the Sunrise Tomorrow Specific Plan would decrease the amount of impervious surfaces in the Specific Plan Area, which could decrease peak stormwater runoff rates and volumes on and downstream of the Specific Plan Area. The Sunrise Tomorrow Specific Plan includes an extensive system of on-site stormwater collection, treatment and retention facilities to accommodate the increased stormwater flows that would originate in the Specific Plan Area.

The Specific Plan would incorporate best management practices (BMPs) to support sustainable development including the potential to restore the undergrounded creek and create native habitat, bioswale / run-off collection, and large permeable Green Surfaces that would reduce long term impacts to surface water quality. In addition, surface runoff from the area will be managed via parcel-based Low Impact Development (LID) measures and flow reducing BMPs to prevent local flooding within the site. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than flows under existing conditions.

The proposed development, including water quality BMPs, is designed to minimize or eliminate increases in runoff from these new impervious surfaces entering surface water courses and storm drains.

With the design and construction of stormwater and LID improvements, and with implementation of the mitigation measures included in this EIR, the Sunrise Tomorrow Specific Plan would not increase peak stormwater runoff. The proposed Specific Plan, when considered alongside all past,

present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control peak stormwater runoff.

The proposed Specific Plan would not have cumulatively considerable impacts associated with stormwater runoff. Overall, implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** contribution to stormwater runoff.

Impact 4.7: Cumulative impacts related to degradation of water quality (Less than Significant and Less than Cumulatively Considerable)

The proposed inclusion of required LID and other BMPs would reduce the pollutant load into the storm drain system, and would not degrade the water quality of the system. As discussed in Section 3.7, Hydrology and Water Quality, a tributary to Arcade Creek was previously buried and undergrounded as part of the original Sunrise Mall construction. As part of the proposed Specific Plan, this existing on-site creek may be restored along with the associated native riparian habitat. The Specific Plan would also incorporate best practices to support improvement of existing water quality including bioswale / run-off collection, and large permeable Green Surfaces that would reduce long term impacts to surface water quality.

Construction of the proposed Specific Plan would contribute to urban pollutant loading into surface water bodies, which could adversely affect water quality. Cumulative development in the proposed Specific Plan Area would also result in decreased impervious surfaces that could decrease the rate and amount of runoff, thereby improving existing surface water quality. The primary sources of water pollution include: runoff from roadways and parking lots; runoff from landscaping areas; non-stormwater connections to the drainage system; accidental spills; and illegal dumping. Runoff from roadway and parking lots could contain oil, grease, and heavy metals; additionally, runoff from landscaped areas could contain elevated concentrations of nutrients, fertilizers, and pesticides.

The proposed Specific Plan will be required to comply with the Stormwater Quality Design Manual (SQDM) for the Sacramento Region, as required by Mitigation Measure 3.7-1. The Specific Plan would be subject to the required stormwater quality control measures, including source control, low impact development control, treatment control, trash capture, and hydromodification control. This will include BMPs to regulate stormwater quality for the Plan Area which will be designed in accordance with the City of Citrus Height's National Pollutant Discharge Elimination System Permit (NPDES) issued by the Regional Water Quality Control Board (RWQCB).

Compliance with City and County water quality protection regulations, approval from the RWQCB, and Mitigation Measure 3.71 would ensure that the proposed Specific Plan minimizes impacts to surface water quality. Implementation of the proposed Specific Plan would have a ***less than significant*** cumulative impact relative to this environmental topic. As such, impacts related to water quality would result in a ***less than cumulatively considerable*** contribution.

Impact 4.8: Cumulative impacts related to degradation of groundwater supply or recharge (Less than Significant and Less than Cumulatively Considerable)

The Sunrise Tomorrow Specific Plan would result in reduced impervious surfaces compared to the existing site and could increase rainwater infiltration and groundwater recharge in those areas. Infiltration rates vary depending on the overlying soil types. In general, sandy soils have higher infiltration rates and can contribute to significant amounts of ground water recharge; clay soils tend to have lower percolation potential; and impervious surfaces such as pavement significantly reduce infiltration capacity and increase surface water runoff.

The proposed development, including water quality BMPs, is designed to minimize or eliminate increases in runoff from these new impervious surfaces entering surface water courses and storm drains. Peak runoff and total volume of runoff will be minimized by future development of storm drainage design which allows for water infiltration to the maximum extent possible.

Future development of the Plan Area under the proposed Specific Plan would modify the movement of water across the land surface and the infiltration of rain water into the groundwater system. If the site conditions do allow for groundwater recharge, the Specific Plan would not decrease groundwater recharge beyond existing conditions as the majority of the site is currently paved with minimal landscaped area allowing for infiltration into the groundwater. The implementation of the proposed Specific Plan would allow for increased infiltration and groundwater recharge due to the development of BMPs to support sustainable development including the restoration of creek and native habitat, bioswale / run-off collection, and large permeable green surfaces.

According to the Department of Water Resources (DWR) Bulletin 118, *California's Groundwater*, the Plan Area is located within the Sacramento Valley Groundwater Basin, North American subbasin. The western portion of the Sacramento Valley Groundwater Basin, North American subbasin, currently operates within sustainable yield, estimated to be approximately 90,000 acre-feet per year. The Plan Area is located well east of existing and proposed groundwater pumping facilities and will not directly receive groundwater supplies.

The Plan Area receives its water from the Citrus Heights Water District (CHWD), which primarily uses surface water as its source of supply. Therefore, groundwater is not expected to be a significant source of water for the Specific Plan and development of the Specific Plan would not deplete groundwater supplies. The proposed Specific Plan would be served from the City's existing and future water supplies. As discussed in Section 3.13, Utilities, the Citrus Heights Water District currently supplements its surface water supply with five groundwater wells; this provides additional capacity for CHWD to meet peaking, pressure, shortage, and emergency demands. During normal supply years, CHWD draws 900 acre-feet of groundwater to supplement surface water supply.

The Citrus Heights Water District forecasts that it will have sufficient water supplies for demands in its service area over the 2020 to 2040 period in normal, single-dry-year, and multiple-dry-year conditions. Additionally, the Specific Plan water demand is not expected to exceed the City's

supplies in any normal, single dry, or multiple dry year between 2020 and 2040. Therefore, the Specific Plan, as proposed, does not significantly impact water supplies and adequate water supplies would be available to serve the Plan Area.

The proposed Specific Plan, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), would not be expected to cause any significant cumulative impacts given that the proposed Specific Plan mitigation measures require maintaining water quality standards and preserving the infiltration of rainwater within the aquifer. The proposed Specific Plan would not have cumulatively considerable impacts associated with groundwater supply/recharge. For the reasons mentioned above, the proposed Specific Plan would not cause the substantial depletion of groundwater supplies or interfere substantially with groundwater recharge. Implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** impact relative to this topic.

Impact 4.9: Cumulative impacts related to flooding (Less than Significant and Less than Cumulatively Considerable)

As shown on Figure 3.7-2, the Plan Area is not within a 100-year flood zone as delineated by the Federal Emergency Management Agency. The Plan Area is also not located within the 200-year floodplain as delineated on the most recent 200-year flood plain maps for Citrus Heights. Development of the proposed Specific Plan would not place housing or structures in a 100-year or 200-year flood hazard area. As a result, the proposed Specific Plan is not at risk of the 100-year flood.

Future development projects in the area would result in decreased impervious surface area and decreased discharges of stormwater during storm events. These future development projects would lead to an incremental decrease in peak stormwater runoff, and potential incremental decreases in downstream flood elevations. The City manages local storm drain facilities and the SCWA is responsible for regional flood control planning within the County. Permits and approvals would be needed from several regulatory agencies including (but not exclusive to) the Department of Fish & Game, Central Valley Regional Water Quality Control Board, and Sacramento Area Flood Control Agency (SAFCA) for work within the Waters of the State (WOTS). It is noted that additional permits are not required for work outside the riparian corridor/engineered channel.

The Sunrise Tomorrow Specific Plan reduces the impervious surfaces from approximately 95 acres to approximately 70 acres resulting in a reduction of stormwater discharging from the site. The proposed plan includes an extensive system of on-site stormwater collection, treatment and infiltration facilities to accommodate the stormwater flows that originate in the Specific Plan Area. Surface runoff from the area would be managed via flow reducing BMPs to prevent local flooding within the Specific Plan Area. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than flows under existing conditions.

In addition to the BMPs, open space areas, which include LID features, would also be incorporated throughout the Specific Plan Area to reduce and eliminate the need for large, unattractive,

industrial-looking detention/retention basins. Instead, supplemental storm water facilities, where provided or needed, would include varied slopes through grading and the use of plants and trees and other elements to create a natural appearance.

The proposed development, including water quality BMPs, is designed to minimize or eliminate increases in runoff from entering surface water courses and storm drains.

The proposed Specific Plan when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), would not be expected to cause any significant cumulative impacts given that mitigation measures for new development projects require designs that ensure structures are outside the base flood elevation and that storm water flows are maintained to prevent downstream flooding. The proposed Specific Plan would not have cumulatively considerable impacts associated with flooding. Overall, implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** contribution to the potential for impacts related to flooding.

NOISE

The cumulative context for a cumulative analysis can be defined by region, by political subdivision or by the geography. This area was chosen because it represents the area that is reasonably expected to be affected by changes to the ambient noise levels as the Plan Area builds out.

Impact 4.10: Specific Plan implementation may contribute to the cumulative exposure of existing and future noise-sensitive land uses or to increased noise resulting from cumulative development (Less than Significant and Less than Cumulatively Considerable)

Traffic circulation, parking areas, and amplified music or speech in Sunrise Commons Park are considered to be the primary noise sources for the proposed Specific Plan. Additionally, community plazas and gathering areas are substantial noise-generating components. This analysis considers each of these primary noise sources along with vehicle circulation in the Plan Area.

Sensitive land uses include existing single-family residential uses to the south of the Plan Area and multi-family residential uses to the east of the Plan Area. Figure 3.9-2 shows the daytime operational noise contours for existing sensitive receptors in the area. As shown on Figure 3.9-2, Specific Plan buildout is predicted to expose nearby residences to daytime noise levels up to 51 A-weighted sound levels (expressed as dBA), equivalent or energy-averaged sound level (L_{eq}) during daytime (7:00 a.m. to 10:00 p.m.) hours and 39 dBA, L_{eq} during daytime (10:00 p.m. to 7:00 a.m.) hours. This would comply with the City of Citrus Heights Noise Ordinance daytime standard of 55 dBA, L_{eq} and nighttime standard of 50 dBA, L_{eq}. Therefore, no exterior noise control measures would be required, and impacts resulting from exterior noise levels due to operation of the proposed Specific Plan would be considered less-than-significant.

Tables 4.0-4 and 4.0-2 show the Specific Plan-related noise level increases in the existing plus project and cumulative plus project conditions.

TABLE 4.0-1: EXISTING TRAFFIC NOISE LEVEL AND PROJECT-RELATED TRAFFIC NOISE LEVEL INCREASES

ROADWAY	SEGMENT	PREDICTED EXTERIOR NOISE LEVEL (DBA LDN) AT CLOSEST SENSITIVE RECEPTORS

Macy Plaza Blvd	East of Sunrise	62.0	63.8	1.8

SOURCE: FHWA-RD-77-108 WITH INPUTS FROM FEHR & PEERS SAXELBY ACOUSTICS. 2020.

Based upon the Federal Interagency Committee on Noise (FICON) criteria, where existing traffic noise levels are greater than 65 dB Ldn, at the outdoor activity areas of noise-sensitive uses, a +1.5 dB Day/Night Average Sound Level (L_{dn}) increase in roadway noise levels would be considered significant. Where existing noise levels are between 60 dB and 65 dBA L_{dn}, a +3.0 dB L_{dn} increase in roadway noise levels would be considered significant. As shown in Tables 4.0-1 and 4.0-2, the maximum increase in traffic noise at the nearest sensitive receptor is predicted to be 0.7 dBA where existing noise levels exceed 65 dBA L_{dn}, and 1.8 dB where existing noise levels are between 60 to 65 dBA L_{dn}. Therefore, no noise control measures would be required, and impacts resulting from increased traffic noise would be considered less-than-significant.

Noise generated by construction would be temporary, and would not add to the permanent noise environment or be considered as part of the cumulative context. The total construction noise impact of the proposed Specific Plan would not be a substantial increase to the existing future noise environment.

The proposed Specific Plan, when considered alongside all past, present, and probable future projects (inclusive of buildout of the General Plan), would not result in a significant cumulative

impact related to traffic noise. The proposed Specific Plan's incremental contribution towards cumulative noise impacts would be ***less than cumulatively considerable*** *and* ***less than significant*****.**

POPULATION AND HOUSING

The cumulative context for a cumulative analysis can be defined by region, by political subdivision or by the geography. The cumulative setting for population and housing includes Sacramento County. This area was chosen because it represents the area that is reasonably expected to be affected by population and housing changes generated by the proposed Specific Plan. Sacramento County was also the geographic area evaluated under the cumulative analysis contained within the Final General Plan EIR.

Impact 4.11: Cumulative impact on the potential to induce substantial population growth in an area (Less than Significant and Less than Cumulatively Considerable)

Continued development in Citrus Heights and Sacramento County will result in housing unit and population increases in the region. The Sunrise Tomorrow Specific Plan proposes the future redevelopment of the approximately 95.8-acre Plan Area to transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play. Because the Specific Plan could include up to 2,220 total residential housing units, implementation of the Specific Plan would result in direct population growth. The addition of up to 2,220 housing units at full buildout has the potential to increase the population of the city by an estimated 5,661 persons (based on a persons per dwelling unit factor of 2.55, in accordance with the Citrus Heights General Plan) The Citrus Heights General Plan (2011) and General Plan Program EIR analyzed impacts to population and housing and found that future development resulting from implementation of the General Plan would result in a less than significant impact related to substantial population and housing unit growth over existing conditions. However, the 2011 General Plan and General Plan EIR did not account for the redevelopment of the Plan Area into a mixed use development resulting in the production of housing units; therefore, the total buildout estimates in the General Plan and General Plan EIR did not account for additional growth within the Plan Area.

While the total buildout estimates in the General Plan and General Plan EIR did not account for additional growth within the Plan Area, the proposed Specific Plan is consistent with the regional growth projections. SACOG has identified the Sunrise Mall as one of 12 commercial corridors in the Sacramento region struggling with vacant or underutilized lots and lacking the density or mix of residential and commercial uses that support a sense of place that can attract more people, offering an opportunity for revitalization. The Sacramento Region Blueprint 2050 Preferred Scenario Map prepared by SACOG identifies the Plan Area for Mixed-Use Employment Focus land uses. As described in Chapter 3.8, Land Use, the Plan Area is designated as a Center and Corridor Community by the 2020 MTP/SCS and MTP/SCS EIR, which is defined as historic downtowns, main streets, commercial corridors, rail station areas, central business districts, town centers, or other high-density destinations. Center and Corridor Communities typically have more compact development patterns, a greater mix of uses, and a wider variety of transportation infrastructure

compared to the rest of the region. The Specific Plan would provide for development of higher density residential and nonresidential uses in a location near several bus routes. Therefore, the future growth of the Plan Area is consistent with the regional growth estimates for Citrus Heights analyzed and anticipated in the 2020 MTP/SCS and MTP/SCS EIR.

Infrastructure needed to support development of the Specific Plan Area and the subsequent population, housing and employment increases expected through implementation of the Sunrise Tomorrow Specific Plan have already been planned and evaluated. Additionally, all lands within the General Plan jurisdiction that have been planned to accommodate growth within the City have been evaluated in the MTP/SCS EIR. As discussed in Section 3.8, Land Use and Planning, of this EIR, development under the proposed Specific Plan would be consistent with the land use, density, and intensity of development anticipated in the 2020 MTP/SCS. The proposed Specific Plan is consistent with the goals established in the 2020 MTP/SCS and would promote the ability of SACOG and the region to achieve those goals. The proposed development of the Specific Plan Area would not induce growth in the Specific Plan Area, adjacent undeveloped parcels, or within the city that has not already been accounted for in the 2020 MTP/SCS, and evaluated for environmental impacts by the MTP/SCS EIR. The proposed Specific Plan, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Sacramento County), would not be expected to cause any significant cumulative impacts. The proposed Specific Plan would not have cumulatively considerable impacts associated with population and housing. As such, implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** contribution to impacts to population and housing.

PUBLIC SERVICES AND RECREATION

The cumulative setting would include all areas covered in the service areas of the City of Citrus Heights Police Department, City of Citrus Heights Fire Department, City of Citrus Heights Recreation and Community Services Department, San Juan Unified School District, and the Sylvan Oaks Library. This geographic area was chosen because these service providers would be required to serve the proposed Specific Plan and contains those service providers that have to potential to bear a cumulative impact from the proposed Specific Plan, when the proposed Specific Plan is considered together with all past, present, and probably future projects within these providers' service areas.

Impact 4.12: Under cumulative conditions, the proposed Specific Plan may result in effects on public facilities (Less than Significant and Less than Cumulatively Considerable)

Development accommodated under the Specific Plan would result in additional residents and businesses in the City, including new residential, office, and commercial uses. As described in Chapter 2.0, the Specific Plan is expected to accommodate up to 2,220 residential dwelling units, up to 480 hotel rooms, up to 320,000 square feet of retail uses, up to 960,000 square feet of office uses, and up to 450,000 SF of community/institutional land uses within the city limits at full buildout.

Under cumulative conditions future local and regional growth will result in increased demand for schools, police protection, fire protection, schools, parks/recreation, and library services. The City and its associated service providers must continue to evaluate the levels of service desired and the funding sources available to meet increases in demand.

Under cumulative conditions, future development of the Plan Area in accordance with the proposed Specific Plan land use map may result in the construction of public facilities, which may cause substantial adverse physical environmental impacts. The impact fees developed and reviewed by the City will recover future development's proportionate share of City-related capital asset costs. Fees, as applied only to new development, represent future development's proportionate share of public services and facilities capital costs.

It is also important to note that, in addressing public service demand issues under CEQA, the appropriate focus is on the environmental effects of whatever steps might be necessary to achieve or maintain adequate service. For example, if proposed new development would create an increased demand for law enforcement or fire protection services, an EIR should inquire as to whether new or expanded physical facilities may be required in order to provide such service. The "impacts" addressed under CEQA are the physical effects of providing service, not any possible failure to provide adequate service under applicable standards. (See *City of Hayward v. Board of Trustees of the Cal. State University* (2015) 242 Cal.App.4th 833, 843 ["[t]he need for additional fire protection services is not an environmental impact that CEQA requires a project proponent to mitigate"]; *Goleta Union School Dist. v. Regents of Univ. of Cal.* (1995) 37 Cal.App.4th 1025, 1031–1034 [school overcrowding attributable to new development is not an environmental effect subject to CEQA, though the physical effects of new facility construction to serve new students would be]; and CEQA Guidelines, § 15131, subd. (a) ["[e]conomic or social effects of a project shall not be treated as significant effects on the environment"].)

Moreover, it is critical to understand that special legal principles apply to impacts to school facilities. According to Government Code Section 65996, the development fees authorized by Senate Bill 50 (1998) (described earlier) are deemed to be "full and complete school facilities mitigation" for impact caused by new development. The legislation also recognized the need for the fee to be adjusted periodically to keep pace with inflation. The legislation indicated that in January 2000, and every two years thereafter, the State Allocation Board would increase the maximum fees according to the adjustment for inflation in the statewide index for school construction.

Section 65996 also prohibits public agencies from using CEQA or "any other provision of state or local law" to deny approval of "a legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property or any change in governmental organization or reorganization" on the basis of the project's impacts on school facilities.

Development and growth facilitated by the Specific Plan would result in increased demand for public services, including fire protection, law enforcement, schools, parks, libraries, and other public and governmental services. The Specific Plan includes policies and actions to ensure that

public services are provided at acceptable levels and to ensure that development and growth does not outpace the provision of public services.

Cumulative growth that would occur within Sacramento County and other cities within Sacramento County over the life of the proposed General Plan will result in increased demand for public services, including fire protection, law enforcement, schools, parks, libraries, and other public and governmental services. As the demand for public services and recreation increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded service structures (e.g., offices, maintenance and administrative buildings, schools, parks, fire facilities, libraries, etc.) will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth within the cumulative analysis area.

The Specific Pan includes a range of policies and actions that would ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the City and appropriate service agency, and that new development funds its fair share of services. The Specific Plan includes policies to ensure that fire protection and law enforcement services keep pace with new development and that school, library, and governmental services are adequately planned and provided. Payment of applicable impact fees, and ongoing revenues that would come from property taxes, sales taxes, and other revenues generated by the future projects, would ensure that the City maintains acceptable service ratios. For these reasons, implementation of the proposed Specific Plan would have a ***less than significant*** impact. Additionally, the proposed Specific Plan's incremental contribution to cumulative public services and recreation impacts would *be* ***less than cumulatively considerable***.

TRANSPORTATION AND CIRCULATION

The cumulative setting for this analysis including the City of Citrus Heights Sphere of Influence and some nearby areas of unincorporated County. This geographic limitation was used because it represents the area that would reasonably be expected to be affected by the proposed Specific Plan in in combination with past, present, and probable future projects.

The analysis models the overall change in VMT in Citrus Heights as a result of forecast development, with the addition of the proposed Specific Plan. The intent is to understand how the proposed Specific Plan will influence travel behavior in light of future conditions, and to identify possible significant future impacts.

The year 2040 is the horizon year for cumulative condition impact analyses. Based on observed volumes in the existing condition, Fehr & Peers used travel behavior forecasting software to estimate and distribute future vehicle traffic onto the roadway network in order to test how the proposed Specific Plan would impact the transportation network. This reflects the level of development anticipated within the foreseeable future.

Impact 4.13: Specific Plan implementation would not cause a significant cumulative impact to the roadway network based on its transit accessible and VMT efficient location (Less than Significant and Less than Cumulatively Considerable)

The Plan Area is situated in a City that is nearly built out. This is evidenced by the fact that traffic along Sunrise Boulevard and Greenback Lane is expected to grow by less than 30 percent over the next 20 years. By comparison, in developing communities, growth may often double in that time period. Accordingly, the Plan Area's current VMT efficiency would be similar under cumulative conditions, if not improved by virtue of the on-site transit center and potential for enhanced bus service adjacent to it. For these reasons, implementation of the proposed Specific Plan would have a ***less than significant*** and ***less than cumulatively considerable*** contribution to impacts associated with the roadway network based on its transit accessible and VMT efficient location.

Impact 4.14: Specific Plan implementation could disrupt cumulative pedestrian facilities or conflict with adopted City pedestrian plans, guidelines, policies, or standards (Less than Significant and Less than Cumulatively Considerable)

The proposed Specific Plan would create a cumulative pedestrian environment that would be much improved over current, or cumulative no project, conditions. As documented in Table 3.12-18 in Section 3.12, the Plan would provide pedestrian facilities along the Plan Area frontages that exceed what is recommended in the City's Pedestrian Master Plan. The Specific Plan would provide pedestrian connections between buildings and to adjacent streets and transit facilities. Additionally, review of the Specific Plan against applicable General Plan and Pedestrian Master Plan policies did not yield any inconsistencies.

The Specific Plan would increase cumulative levels of pedestrian travel at intersections along Sunrise Boulevard and Greenback Lane. Some of these locations do not include crosswalks or pedestrian signal heads for travel along Sunrise Boulevard. The Specific Plan would add pedestrians to the east leg of the Sunrise Boulevard/Greenback Lane intersection, which is known to have conflicts involving pedestrians in the crosswalk and northbound right-turning vehicles. For these reasons, impacts to pedestrian facilities are considered potentially significant.

With implementation of Mitigation Measure 3.12-1 and for the same reasons as described in Impact 3.12-2 in Section 3.12, this impact would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-1.***

Impact 4.15: Specific Plan implementation could disrupt cumulative bicycle facilities or conflict with adopted City bicycle network plans, guidelines, policies, or standards (Less than Significant and Less than Cumulatively Considerable)

The proposed Specific Plan would create a cumulative bicycle environment that would be much improved over current, or cumulative no project, conditions. Additionally, the Plan would improve bicycling conditions relative to recommendations in the City's Bikeway Master

Plan. The Specific Plan would include a continuous Green Loop Class I path along Sunrise Boulevard and Greenback Lane. This is generally considered a more desirable biking environment than the alternative of an on-street Class II bike lane, which positions the bicyclist adjacent to a heavily-traveled, high-speed travel lane. Additionally, review of the Specific Plan against applicable General Plan and Bicycle Master Plan policies did not yield any inconsistencies. Lastly, the Specific Plan would not add bike trips to an existing bicycle facility that does not meet current design standards.

The Specific Plan would increase bicycle travel at intersections along Sunrise Boulevard and Greenback Lane. Dedicated or shared facilities for bicyclists entering/exiting the Plan Area from these signalized locations are not shown on the site plan. Signal equipment present at each signalized intersection is not currently able to detect the presence of bicycles. Additionally, the precise configuration of the crossing of the Green Loop multiuse trail at each signalized intersection has not been developed. For these reasons, impacts to bicycle facilities are considered potentially significant.

With implementation of Mitigation Measure 3.12-2 and for the same reasons as described in Impact 3.12-3 in Section 3.12, this impact would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-2.***

Impact 4.16: Specific Plan implementation could disrupt cumulative transit facilities or services or conflict with adopted City transit plans, guidelines, policies, or standards (Less than Significant and Less than Cumulatively Considerable)

The proposed Specific Plan would substantially improve transit facilities in the site vicinity under cumulative conditions. The Specific Plan would construct a transit center along Sunrise Boulevard, which would be accessible from the Plan Area via a series of sidewalks. The placement of this transit center in this location would also encourage employees and customers at Birdcage Center (west of Sunrise Boulevard) to travel to those location by bus. Additionally, the Specific Plan would provide improved bus stop facilities along Greenback Lane. Review of the Specific Plan against applicable General Plan policies did not yield any inconsistencies.

Vehicle queues in the southbound left-turn lane at the Sunrise Boulevard/Birdcage Center/Primary Street A intersection would exceed the 250 feet of available storage. Since southbound buses would use this lane to access the on-site transit center passenger loading area, buses would incur added delay due to this lack of capacity. Therefore, Specific Plan impacts to transit services would be potentially significant.

Parts (a) through (d) of Mitigation Measure 3.12-3 would reduce delays to buses because the mitigation would lengthen the lanes buses use, make bus travel and movements more efficient, or remove traffic from adjacent lanes buses would travel. Part (e) of Mitigation Measure 3.12-3

would require minor widening easterly into the Plan Area to accommodate the added lane. Although a four-foot raised median is present, additional pavement would be required beyond what could be accomplished with restriping.

Part (g) of Mitigation Measure 3.12-3 was developed in coordination with Sacramento RT to further reduce bus delays by providing preferential bus right-of-way. Both recommendations are considered feasible but would require additional engineering design to support their implementation. The considerable distance between Primary Streets A and B (820 feet) suggests that there should be a 100 to 200-foot mid-block section in which northbound Sunrise Boulevard consists of three lanes. To the north and south of that mid-block point, four lanes would exist. This configuration would prevent passenger vehicles from continuously traveling in the bus lane / right-turn deceleration lane, bypassing stopped traffic.

The specific components of Mitigation Measure 3.12-3 would be particularly beneficial to transit operations under cumulative conditions. Part (e) of Mitigation Measure 3.12-3 would convert the outside southbound left-turn lane on Sunrise Boulevard at Primary Street A to a "bus-only" lane to enable efficient bus access to the transit center. This represents a considerable improvement in transit facility access and service improvement over the no project condition. Similarly, the bus-only and queue bypass lanes describes in part (g) of Mitigation Measure 3.12-3 would also substantially benefit transit service.

With implementation of Mitigation Measure 3.12-3 and for the same reasons as described in Impact 3.12-4 in Section 3.12, this impact would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-3.***

Impact 4.17: Specific Plan implementation could result in cumulative on-site circulation and access that does not meet City or industry standard design guidelines (Less than Significant and Less than Cumulatively Considerable)

Figure 3.12-6, Vehicular Access, in Section 3.12 displays on-site circulation amenities such as valet/rideshare drop-off/pick-up areas, loading zones for trucks, and drive aisle access openings to surface lots and garages. Thus, many of the plan elements have been designed to industry standards. All proposed Plan Area roadways would both be private streets. Accordingly, they must be designed to current City standards. The two roundabouts proposed on these streets do not comply with City design standards. Additionally, several of the Specific Plan accesses would not have sufficient on-site throat depths to accommodate outbound project trips. If exiting traffic spills back to the first internal intersection at these access points, those intersections could become blocked, thereby restricting the flow of inbound traffic and causing queue spillbacks onto Sunrise Boulevard or Greenback Lane. For these reasons, impacts to on-site circulation and access would be potentially significant.

The improvements described in Mitigation Measure 3.12-4 are considered feasible because they would occur within the Plan Area. Additionally, analysis of their capacity versus projected travel demands indicate that they would accommodate cumulative levels of exiting traffic and not cause any inbound traffic to spill onto public streets. Part (b) of Mitigation Measure 3.12-4 would require the roundabouts to be designed to City standards.

With implementation of Mitigation Measure 3.12-4 and for the same reasons as described in Impact 3.12-5 in Section 3.12, this impact would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-4.***

Impact 4.18: Specific Plan implementation could substantially increase cumulative hazards due to geometric design features (Less than Significant and Less than Cumulatively Considerable)

Future buildout of the Plan Area under the proposed Specific Plan would cause three turn lanes at Plan Area access intersections to have maximum queues that exceed the available storage in the cumulative condition. These locations are listed below:

- **Westbound left-turn lane on Greenback Lane at Parkway A** – maximum queue of 400 feet during the AM peak hour and 375 feet during the PM peak hour would exceed the 275-feet of available storage.
- **Southbound left-turn lane on Sunrise Boulevard at Primary Street A** – maximum queue of 275 feet during the AM peak hour and 300 feet during the PM peak hour would exceed the 250-feet of available storage.
- **Southbound left-turn lane on Sunrise Boulevard at Primary Street B** – maximum queue of 300 feet during the PM peak hour would exceed the 250-feet of storage provided in the turn lane.

These conditions could cause a substantial hazard due to queued vehicles extending out of the turn lane into the adjacent through lane. Mitigation Measure 4.0-1 would be required to alleviate these potentially hazardous conditions at the three aforementioned locations.

The operational enhancements described in Mitigation Measures 3.12-3 and 3.12-4 in Section 3.12, Transportation and Circulation, would provide improved operations at project access intersections. Notably, the westbound left-turn lane on Greenback Lane at Parkway A would have a maximum queue of 325 feet with the improvements. Thus, Mitigation Measure 3.12-5, which calls for lengthening this turn lane to provide this amount of storage, would still apply and be adequate to serve the expected queue. The southbound left-turn lane on Sunrise Boulevard at Primary Street A would also operate with an acceptable level of queuing with the operational enhancements in place. This conclusion presumes that the outside left-turn lane does not become a dedicated bus lane, since no such service is currently planned/programmed for operation. The

operational enhancements would cause the southbound left-turn lane on Sunrise Boulevard at Primary Street B to experience a maximum queue of 275 feet, still 25 feet more than what is provided. Accordingly, Mitigation Measure 4.0-1 below is recommended to address this condition. This mitigation would likely require removal of one of the three Sunrise Marketplace advertising columns situated in the median. Each of these mitigation measures discussed above are considered feasible because the improvements would occur within the medians of Greenback Lane or Sunrise Boulevard, or would otherwise require widening within the Plan Area. With implementation of Mitigation Measures 3.12-5 and 4.0-1, this impact would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-5.***

Mitigation Measure 4.0-1: *The project applicant shall implement the following improvement at such time that 10 percent of the Plan Area's total permitted square footage has been constructed.*

- *Lengthen southbound left-turn lane on Sunrise Boulevard at Primary Street B from 250 feet to 275 feet.*

Impact 4.19: Specific Plan implementation would not result in cumulatively inadequate emergency vehicle access (Less than Significant and Less than Cumulatively Considerable)

The proposed Specific Plan would not result in inadequate emergency access during construction or operation under cumulative conditions. Nearby traffic signals include emergency vehicle pre-emption, which would ensure that emergency vehicles can move through an intersection as quickly as possible. Sacramento Metro Fire Station 21 is situated about two-thirds of a mile west of the Plan Area along Greenback Lane. The California Fire Code requires a minimum of two access points to a project of this size. The provision of multiple access points to the Plan Area would satisfy this requirement and ensure that adequate emergency access would be provided. For these reasons, impacts to emergency vehicle access would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

Impact 4.20: Specific Plan implementation could cause temporary but prolonged impacts under cumulative conditions due to lane closures, need for temporary signals, emergency vehicle access, traffic hazards to bikes/pedestrians, damage to roadbed, or truck traffic on roadways not designated as truck routes (Less than Significant and Less than Cumulatively Considerable)

Demolition of existing buildings and construction of the proposed Specific Plan would generate a variety of truck and employee trips. Construction staging and lane closures could cause adverse impacts to local/regional traffic circulation if not carefully planned. Adverse impacts associated with construction activities may include reduced vehicle safety, interference with emergency vehicle circulation, traffic hazards to bikes or pedestrians, damage to roadbeds, and potential truck

traffic on roadways not designated as truck routes. Construction may occur in several phases, which could overlap with other construction activity in the area, thereby resulting in greater disruption to transportation facilities under cumulative conditions. Therefore, the effects of construction activity under cumulative conditions are considered potentially significant.

With implementation of a Construction Traffic Management Plan required by Mitigation Measure 3.12-6 in Section 3.12, cumulative impacts relating to traffic circulation and operations during project construction would be ***less than significant***, and the Specific Plan's contribution to this impact would be ***less than cumulatively considerable.***

MITIGATION MEASURE(S)

Implement ***Mitigation Measure 3.12-6.***

UTILITIES AND SERVICE SYSTEMS

The cumulative setting for each of the utilities impacts is described in the respective impacts, below.

Impact 4.21: Cumulative impact on wastewater utilities (Less than Significant and Less than Cumulatively Considerable)

Under the proposed Specific Plan buildout conditions, the City of Citrus Heights would see an increased demand for wastewater service.

The study area for cumulative impacts regarding wastewater is the City of Citrus Heights General Plan Planning Area and the Sacramento Area Sewer District as it is responsible for operating the Sacramento Regional County Sanitation District (Regional San) Facility. The Sacramento Area Sewer District (SASD) operates and maintains the laterals and main line pipes for wastewater conveyance and collection from the source to the Regional San interceptors. Regional San is responsible for collection by interceptors (sanitary sewers that are designed to carry flows in excess of 10 million gallons per day [MGD]) and for wastewater treatment in Sacramento County. This district owns, operates, and is responsible for the collection, trunk, and interceptor sewer systems throughout Sacramento County as well as the Sacramento Regional Wastewater Treatment Plant (SRWTP) located near Elk Grove.

The main SASD collection system includes over 3,000 miles of sewer pipelines ranging in size from 6 to 75 inches in diameter. The Plan Area is currently served by a system of existing vitrified clay pipe (VCP) mains and building laterals that convey on-site sewer from the site for treatment. The 8" VCP sanitary sewer on the north side of the mall site is conveyed to the northwest corner of the mall where it continues south along the western mall frontage to the southwest corner of the main mall. Sewer mains conveying wastewater south along the eastern mall frontage all confluence at the same southwest corner of the main mall. The site system conveys wastewater through a final 8" main that ties into an existing sewer manhole and into the 15" public sewer main/collector located on the east side of Sunrise Boulevard. Under the proposed Specific Plan Maximum Development conditions, sewer flows would increase significantly due to the addition of

residential, office, restaurants, hotels, retail, and entertainment uses. There would be a network of sewer collection infrastructure installed throughout the Plan Area.

An initial analysis by SASD in February 2021 concluded the primary outfall serving the Plan Area may needed to be upgraded to a 10-inch diameter main; the current capacity of the existing 15-inch public sewer main/collector along Sunrise Boulevard is expected to be adequate increased flows resulting from full build-out of the Plan Area.

As discussed in Section 13-1, Wastewater Service, buildout of the Specific Plan does not trigger a need to expand the Regional Facility. The SASD Interceptor System Master Plan projects new development associated with implementation of the Specific Plan would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 592 MGD at full build-out of the Upper Northwest service area and special areas of concern, including the Specific Plan Area. Given the capacity of 12 to 34 MGD, and the 0.1 MGD generated by the buildout of the Plan Area (including existing demand and future demand), there is sufficient plant capacity

Therefore, the proposed Specific Plan's cumulative contribution to wastewater service is ***less than significant*** and ***less than cumulatively considerable*** incremental impact on wastewater utilities.

Impact 4.22: Cumulative impact on water utilities (Less than Significant and Less than Cumulatively Considerable)

The study area for cumulative impacts regarding water supply is the Citrus Heights General Plan Planning Area and the CHWD water service area, which services the Specific Plan Area. The CHWD service area includes a population of 65,093 (43% of the total population) through 19,785 connections (39% of the total connections in the City of Citrus Heights).

The provision of public services and the construction of onsite and offsite infrastructure improvements will be required to accommodate future development consistent with the Specific Plan land use map. The Specific Plan would likely require extension of offsite water infrastructure to the undeveloped and underdeveloped portions of the Plan Area for water service. All offsite water piping improvements would be in or adjacent to existing roadways, thereby limiting new environmental impacts. Additionally, future development in the Plan Area would be required to pay the applicable water system connection fees and pay the applicable water usage rates. As discussed in Impact 3.13-3, the proposed Specific Plan has the potential to require the construction of new water facilities or expansion of existing facilities, potentially resulting in a significant environmental impact. The water infrastructure would be sized to meet the demand of future projects within the Plan Area.

Table 3.13.5 in Section 3.13 summarizes the projected availability of the City's existing and planned future potable water supplies and the City's projected water demands in normal, single dry and multiple dry years through 2040. The WSA completed for the Specific Plan demonstrates that the City's existing and additional potable water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with

the Specific Plan, to the year 2040, under all hydrologic conditions. Therefore, the proposed Specific Plan's cumulative contribution to water service is ***less than significant*** and ***less than cumulatively considerable*** incremental impact on water facilities.

Impact 4.23: Cumulative impact on solid waste facilities (Less than Significant and Less than Cumulatively Considerable)

The cumulative context for cumulative impacts on solid waste facilities is the Republic Services (formerly Allied Waste Services) service area. Republic Services provides solid waste and recycling collection services to the City of Citrus Heights.

Solid waste generated in the City is disposed at the Kiefer Landfill. This landfill is permitted to accept a maximum of 10,800 tons per day of solid waste and currently has an average intake of approximately 6,000 tons per day. The landfill has a remaining capacity of 113 million cubic yards and is currently operating below permitted capacity with an anticipated closure date of approximately 2064.

The addition of solid waste associated with future buildout of the Specific Plan Area, would result in greater solid waste needing to be disposed of at the Kiefer Landfill. However, this increase would not cause an exceedance of the landfill's remaining capacity. In addition, AB 939 mandates the reduction of solid waste disposal in landfills. The Sacramento County Integrated Waste Management Plan, adopted in March 1996, consists of a siting element, summary plan, source reduction and recycling, household hazardous wastes, and non-disposal facility elements. The Countywide Integrated Waste Management Plan requires recycling programs that are expected to result in a 50% diversion away from landfills, thereby extending the life of landfills. Therefore, the proposed Specific Plan's cumulative contribution to solid waste is ***less than significant*** and a ***less than cumulatively considerable*** impact on solid waste facilities.

4.2 SIGNIFICANT IRREVERSIBLE EFFECTS

LEGAL CONSIDERATIONS

CEQA Section 15126.2(c) and Public Resources Code Sections 21100(b)(2) and 21100.1(a), require that the EIR include a discussion of significant irreversible environmental changes which would be involved in the proposed action should it be implemented. Irreversible environmental effects are described as:

- The project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of a project would generally commit future generations to similar uses (e.g., a highway provides access to previously remote area);
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The phasing of the proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Determining whether the proposed project would result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed such that there would be little possibility of restoring them. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

Analysis

Implementation of the Sunrise Tomorrow Specific Plan would result in the further development of approximately 95.8 acres of land currently developed with the Sunrise Mall and associated parking areas into residential, office, retail, mixed use commercial, park, and open space facilities. Development of the Sunrise Tomorrow Specific Plan would constitute a long-term commitment to these uses. It is unlikely that circumstances would arise that would justify the return of the land to its original condition.

A variety of resources, including land, energy, water, construction materials, and human resources would be irretrievably committed for the initial construction, infrastructure installation and connection to existing utilities, and its continued maintenance. Construction of the Sunrise Tomorrow Specific Plan would require the commitment of a variety of other non-renewable or slowly renewable natural resources such as lumber and other forest products, sand and gravel, asphalt, petrochemicals, and metals.

Additionally, a variety of resources would be committed to the ongoing operation of the Sunrise Tomorrow Specific Plan. The introduction of new residential, commercial, employment/light industrial, and other uses to the site would result in an increase in area traffic over existing conditions. Fossil fuels are the principal source of energy and the Sunrise Tomorrow Specific Plan would increase consumption of available supplies, including natural gas, gasoline and diesel. These energy resource demands relate to initial project construction, project operation and site maintenance and the transport of people and goods to and from the Plan Area.

The proposed Specific Plan is in part a response to a market need for housing. California is in the midst of a housing crisis, and the proposed Specific Plan is consistent with California's legislative findings about the current housing crisis. (See Gov. Code, § 65589.5[a][1][A] ["California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the State's environmental and climate objectives."].) Therefore, development of the Specific Plan would support the State's efforts to provide additional housing, including a variety of housing types in areas with transit opportunities and that can be adequately served by existing services.

4.3 SIGNIFICANT AND UNAVOIDABLE IMPACTS

Under section 15183 and the statute on which it is based, Public Resources Code section 21083.3, CEQA generally applies only to the impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that

previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. Moreover, lead agencies need not revisit impacts previously addressed as significant effects in the prior EIR. As is discussed in this EIR, the City has determined that, in light of the extensive coverage of particular topics in the General Plan EIR, this EIR need not revisit particular environmental topics.

CEQA Guidelines section 15183 may be used to narrow the range of impacts addressed in an EIR for a project consistent with a local general plan for which an EIR was prepared. As discussed in Section 1.0 Introduction, the following environmental topics, or elements of a topic, were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus certain elements of the following topics are not included within individual sections of the Draft EIR: Agriculture and Forestry Resources, Biological Resources, and Mineral Resources. See Section 1.0 for more information.

CEQA Guidelines Section 15126.2(b) requires an EIR to discuss unavoidable significant environmental effects, including those that can be mitigated but not reduced to a level of insignificance. The following significant and unavoidable impacts of the proposed Specific Plan are discussed in Section 3.2, Section 3.5, and previously in this chapter (cumulative-level). Those topics are summarized below:

- Impact 3.2-1: Specific Plan implementation would conflict with or obstruct implementation of the applicable air quality plan or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard
- Impact 3.5-1: Specific Plan implementation would generate GHGs, either directly or indirectly, that would have a significant effect on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases
- Impact 4.2: Cumulative impact on the region's air quality
- Impact 4.4: Cumulative impact on climate change from increased project-related greenhouse gas emissions

This page left intentionally blank.

5.1 CEQA REQUIREMENTS

The California Environmental Quality Act (CEQA) requires that an Environmental Impact Report (EIR) analyze a reasonable range of feasible alternatives that meet most or all project objectives while reducing or avoiding one or more significant environmental effects of the Specific Plan. The range of alternatives required in an EIR is governed by a "rule of reason" that requires an EIR to set forth only those alternatives necessary to permit a reasoned choice (CEQA Guidelines Section 15126.6[f]). Where a potential alternative was examined but not chosen as one of the alternatives, the CEQA Guidelines require that the EIR briefly discuss the reasons the alternative was dismissed.

Alternatives that are evaluated in the EIR must be potentially feasible alternatives. However, not all possible alternatives need to be analyzed. An EIR must "set forth only those alternatives necessary to permit a reasoned choice." (CEQA Guidelines, Section 15126.6(f).) The CEQA Guidelines provide a definition for a "range of reasonable alternatives" and, thus limit the number and type of alternatives that need to be evaluated in an EIR.

First and foremost, alternatives in an EIR must be potentially feasible. In the context of CEQA, "feasible" is defined as:

> *… capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors.* (CEQA Guidelines 15364)

The inclusion of an alternative in an EIR is not evidence that it is feasible as a matter of law, but rather, reflects the judgment of lead agency staff that the alternative is potentially feasible. The final determination of feasibility will be made by the lead agency decision-making body through the adoption of CEQA Findings at the time of action on the project. (*Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 489; see also CEQA Guidelines Section 15091(a)(3) [findings requirement, where alternatives can be rejected as infeasible]; Section 15126.6 [an EIR must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation]). The following factors may be taken into consideration in the assessment of the feasibility of alternatives: site suitability, economic viability, availability of infrastructure, general plan consistency, other plan or regulatory limitations, jurisdictional boundaries, and the ability of the proponent to attain site control (Section 15126.6 (f) (1)).

Equally important to attaining the project objectives is the reduction of some or all significant impacts, particularly those that could not be mitigated to a less than significant level. The following significant and unavoidable impacts of the Specific Plan are discussed in Section 3.2, Section 3.5, and in Chapter 4.0 (cumulative-level).

- Impact 3.2-1: Specific Plan implementation would conflict with or obstruct implementation of the applicable air quality plan or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard
- Impact 3.5-1: Specific Plan implementation would generate GHGs, either directly or indirectly, that would have a significant effect on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases
- Impact 4.2: Cumulative impact on the region's air quality
- Impact 4.4: Cumulative impact on climate change from increased project-related greenhouse gas emissions

The following analysis of alternatives focuses on significant impacts, including both those that can be mitigated to a less than significant level and those that would remain significant even if mitigation is applied or for which no feasible mitigation is available.

A Notice of Preparation was circulated to the public to solicit recommendations for a reasonable range of alternatives to the Specific Plan. Additionally, a public scoping meeting was held during the public review period to solicit recommendations for a reasonable range of alternatives to the Specific Plan. No comments related to potential alternatives to the Specific Plan were received.

PROJECT OBJECTIVES

The alternatives to the Specific Plan selected for analysis in the EIR were developed to minimize significant environmental impacts while fulfilling the basic objectives of the Specific Plan. As described in Chapter 2.0, Project Description, the following objectives have been identified for the Sunrise Tomorrow Specific Plan:

- Create an economic engine with environments that promote economic activity and job creation by providing a mix of creative office space, food, dining, and entertainment.
- Design a dynamic Main Street and community gathering space by providing an abundance of open space for event programming and a strategically located main street in the core of the Plan Area.
- Establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns.
- Provide safe, convenient, and accessible access to high quality transit corridors with frequent headways and enhanced transit stops.
- Include streets designed for people, with a network of safe and slow speed streets that serve pedestrians and cyclists while allowing vehicular access and enhancing mobility, in order to reduce vehicle-miles-traveled (VMT) and associated greenhouse gas and criteria pollutant emissions.

- Create connected communities with various housing options and high quality of life by providing townhomes, lifestyle housing, senior housing, and mixed use residential.
- Provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential.
- Allow for phased development and infrastructure improvements to respond to market demand while requiring infrastructure and public facilities necessary to serve the project's needs.
- Transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with City General Plan Policy 12.3.

ALTERNATIVES NOT SELECTED FOR FURTHER ANALYSIS

Alternatives to the Specific Plan that include alternative site locations were considered, but rejected from further analysis, as discussed below.

Alternative Site Location

The City of Citrus Heights considered alternative locations early in the public scoping process. The City's key considerations in identifying an alternative location were as follows:

- Is there an alternative location where significant effects of the project would be avoided or substantially lessened?
- Is there a site available within the City's Sphere of Influence with the appropriate size and characteristics such that it would meet the basic project objectives?

The City has found that there are no feasible alternative locations that exist within the City's Sphere of Influence with the appropriate size and characteristics that would meet the basic project objectives and avoid or substantially lessen a significant effect. For these reasons, the City of Citrus Heights determined that there are no feasible alternative locations.

5.2 ALTERNATIVES CONSIDERED IN THIS EIR

Three alternatives to the Specific Plan were developed based on City of Citrus Heights staff input and the technical analysis performed to identify the environmental effects of the Specific Plan. The alternatives analyzed in this EIR include the following three alternatives in addition to the Specific Plan:

- No Project Alternative
- Reduced Intensity Alternative
- Reduced Area Alternative

NO PROJECT ALTERNATIVE

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the

foreseeable future if the project were not approved. For purposes of this analysis, the No Project Alternative assumes that future development of the Plan Area would occur as allowed under the existing General Plan and likely remain in its existing condition. It is noted that the No Project Alternative would fail to meet the project objectives identified for the Specific Plan.

REDUCED INTENSITY ALTERNATIVE

Under this alternative, the Plan Area would be developed with the same uses over the same area as the proposed Specific Plan, but the FARs and residential densities would be reduced by approximately half as compared to the proposed Specific Plan. The maximum development by land use under this alternative is shown in Table 5.0-1.

TABLE 5.0-1: MAXIMUM DEVELOPMENT BY LAND USE – REDUCED INTENSITY ALTERNATIVE

PLANNING AREA	*TOTAL*	*PA-1*	*PA-2*	*PA-3*	*PA-4*	*PA-5*	*PA-6*
Residential (Units)	*1,110*	110	310	180	240	270	0
Hotel (Rooms)	*240*	60	120	0	0	0	60
Retail (GSF)	*160,000*	30,000	80,000	26,000	10,000	10,000	4,000
Office (GSF)	*480,000*	140,000	110,000	0	110,000	120,000	0
Community/Institutional (GSF)	*225,000*	12,000	17,000	6,000	80,000	110,000	4,000

NOTE: GSF = GROSS SQUARE FEET.

SOURCE: GENSLER, 2020.

REDUCED AREA ALTERNATIVE

Under this alternative, the Plan Area would be developed with the same uses with the same FARs and residential densities as the proposed Specific Plan, but the Plan Area would be reduced by approximately half. This would result in half the number of residential units and half the amount of non-residential square feet compared to the proposed Specific Plan.

5.3 ENVIRONMENTAL ANALYSIS

The alternatives analysis provides a summary of the relative impact level of significance associated with each alternative for each of the environmental issue areas analyzed in this EIR. Following the analysis of each alternative, Table 5.0-2 summarizes the comparative effects of each alternative.

NO PROJECT ALTERNATIVE

Aesthetics and Visual Resources

Under the No Project Alternative, the Specific Plan Area would retain the same land use designations and existing facilities currently developed onsite. Under this alternative, the existing uses would remain. Similar to the proposed Sunrise Tomorrow Specific Plan, future development within the Plan Area under the No Project Alternative would be subject to the requirements of the General Plan and the Citrus Heights Municipal Code, which includes design standards in order to ensure quality and cohesive design of the Specific Plan Area. Compliance with the City's development review process and consistency with the General Plan and the Citrus Heights Zoning Ordinance would ensure that impacts are reduced to the greatest extent

possible. This alternative would equally impact the visual and aesthetic character of the site area compared to the proposed Sunrise Tomorrow Specific Plan. Overall, this alternative would have equal impacts to aesthetics when compared to the proposed Sunrise Tomorrow Specific Plan.

Air Quality

As described in Section 3.2, implementation of the Specific Plan would generate emissions during both the construction phase and the operational phase. The projected emissions would be reduced to levels that do not exceed the project-level operational thresholds of significance with implementation of the mitigation measures in Section 3.2.

Construction related impacts would be reduced under this alternative when compared to the Specific Plan, as the extent of development would be decreased and duration of construction would be decreased. Under this alternative, mobile source emissions and emissions associated with residential operations would decrease. Mobile source (vehicle) emissions are directly related to the number of vehicle trips generated by a project. Under this alternative, a reduced number of people, employees, residential units, commercial and office space would be located in the Plan Area. As a result, this alternative would generate lower levels of pollutants from mobile sources. Therefore, this alternative would have decreased impacts related to air quality when compared to the Specific Plan.

Cultural and Tribal Resources

The No Project Alternative would result in ground disturbing activities throughout much of the Plan Area. The Specific Plan is not anticipated to result in significant impacts to cultural or historical resources, and the No Project Alternative would result in similar risks related to the unintentional discovery of such resources by developing much of the Plan Area with residential and commercial uses. As such, this impact would be equal when compared to the Specific Plan.

Geology and Soils

The No Project Alternative would result in the Plan Area remaining in its existing condition. The Specific Plan Area is currently developed with the Sunrise Mall and associated parking areas. The No Project Alternative would not involve new construction that could be subject to seismic, geologic or soils hazards, thus this alternative would have no potential for impact. As such, this impact would be reduced when compared to the proposed Specific Plan.

Greenhouse Gases, Climate Change, and Energy

Under the No Project Alternative, future development of the Plan Area would occur as allowed under the existing General Plan and likely remain in its existing condition. No additional housing units would be constructed in the Plan Area. Implementation of the Plan would generate GHG emissions during construction and operation. Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of a project. As noted previously, construction related impacts would be similar under this alternative when compared to the Specific Plan, as the duration of construction would be comparable.

Under the No Project Alternative, because less people would likely reside within the Plan Area under this alternative, the amount of emissions associated with residential and non-residential activities would decrease and the number of vehicle trips generated would also decrease. As such, the operational, including mobile, greenhouse gas emissions would also decrease when compared to the Specific Plan. While there would be additional development under this alternative, it is anticipated that energy-saving measures would be similar to the Specific Plan and there would not be a significant change in the potential for wasteful, inefficient, or excessive consumption of energy under this alternative.

Hazards and Hazardous Materials

The proposed Specific Plan includes components which will likely use a variety of common household hazardous materials including: paints, cleaners, cleaning solvents, pesticides, fertilizers, and fuel. There will be a risk of release of these materials into the environment if they are not stored and handled in accordance with best management practices approved by Sacramento County Environmental Management Department.

As described in Section 3.6, construction activities may result in the use and transport of common hazardous materials, including oils, fuels, paints and solvents. This potential impact would still occur under the No Project Alternative. Additionally, the operational phases of both the Specific Plan and the No Project Alternative would not pose a significant hazard to the public or the environment. Under the No Project Alternative, no new land uses would be introduced to the Plan Area, and the potential for hazardous material release on the Project site would be eliminated. As such, this impact would be reduced when compared to the proposed Specific Plan.

Hydrology and Water Quality

As described in Section 3.7, implementation of the proposed Specific Plan has the potential to result in the violation of water quality standards and the discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils, potentially impacting water quality. The long-term operation of the proposed Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Mitigation measures provided in Section 3.8 reduce potential water quality impacts to a less than significant level. The proposed Specific Plan would not significantly impact groundwater recharge or place persons or structures in a flood hazard zone.

Under the No Project Alternative, the land would be kept in its present state with the majority of the Plan Area currently developed with the Sunrise Mall and associated parking areas. The existing Plan Area contains greater impervious surfaces compared to the Proposed Plan, which includes bioswale and large permeable green surfaces that would reduce long term impacts to surface water quality and groundwater recharge. The No Project Alternative would provide a greater amount of impervious surface on-site as compared to the Specific Plan, which would

result in greater impacts related to rainfall infiltration and runoff during storm events as compared to the Specific Plan.

Specific Plan implementation has the potential to result in the discharge of pollutants into surface water bodies and would change the existing drainage pattern on the site, although these impacts are less than significant as a result of compliance with local, state, and federal regulations. Under the No Project Alternative, these impacts would be greater compared to the Specific Plan. Overall, potential impacts related to hydrology and water quality would not be reduced under the No Project Alternative when compared to the Specific Plan.

Land Use and Planning

The proposed Specific Plan is not expected to induce population growth that has not already been accounted for as a part of the existing General Plan, or analyzed in detail in this EIR. The proposed Specific Plan does not displace substantial numbers of persons or housing units. The Specific Plan would require a zoning and general plan amendment for land use changes, as well as annexation to the City of Citrus Heights. However, impacts to land use are considered less than significant.

The No Project Alternative would result in no changes to land use and would have no development. The proposed Specific Plan is not expected to induce substantial population increase that has not already been accounted for as a part of the approved General Plan, or analyzed in detail in this EIR. The proposed Specific Plan does not displace substantial numbers of persons or housing units. However, because No Project Alternative would not add any additional population and would not changes land use patterns, impacts related to land use and population would be reduced when compared to the proposed Specific Plan.

Noise

As discussed in Section 3.9, Noise, the primary sources of noise associated with implementation of the proposed Specific Plan are from increased vehicle trips in the project vicinity from on-site uses, and increased noise from future operation within the Specific Plan Area. Under this alternative, noise associated with vehicle trips is expected to slightly decrease due to no residential housing units compared to project implementation; while other on-site noise sources would likely be comparable to those generated by the proposed Specific Plan. When compared to the proposed Specific Plan, this alternative would not result in an increase in the number of housing units. Therefore, this alternative would generate less daily vehicle trips and peak hour trips, which would generate less noise levels on area roadways when compared to the proposed Specific Plan.

In its current condition existing noise-sensitive receptors located near the Plan Area are not currently exposed to exterior traffic noise levels exceeding the daytime standard of 55 dBA, L_{eq} and nighttime standard of 50 dBA, L_{eq} noise level standard for residential uses. As such, this impact would be slightly reduced when compared to the proposed Specific Plan.

Population and Housing

The No Project Alternative would result in no changes to population and housing and would have no development. The proposed Specific Plan is not expected to induce substantial population increase that has not already been accounted for as a part of the approved General Plan, or analyzed in detail in this EIR. The proposed Specific Plan does not displace substantial numbers of persons or housing units. However, because the No Project Alternative would not add any additional population and would not changes land use patterns, impacts related to population and housing would be reduced when compared to the proposed Specific Plan.

Public Services and Recreation

Under the No Project Alternative, the Plan Area would remain developed in its existing condition and there would be no increased demand for public services or recreation. The recreational amenities within the proposed Plan, however, would not be developed for community use. The No Project Alternative would have a reduced impact when compared to the proposed Specific Plan because demand on public services would be reduced with compared to the proposed Specific Plan, with the possible exception of recreational park facilities.

Transportation and Circulation

The No Project Alternative would not introduce additional vehicle trips and miles traveled on the area roadways. It was determined that the proposed Specific Plan would result in 6.5 work vehicle-miles-traveled (VMT) per employee per capita and 11.2 VMT per resident per capita. The existing baseline for the SACOG six-county region is 11.0 work VMT per employee and 17.9 VMT per resident; as such, the proposed Specific Plan is forecast to result in better than existing baseline VMT. Additionally, impacts associated with bicycle facilities, pedestrian facilities, transit facilities, emergency access, and hazards due to design features were determined to be less than significant.

Under the No Project Alternative, the Plan Area would not be developed and would remain in its existing condition. Furthermore, there would be no increased traffic activities, including both automobile and non-automobile activities associated with the site. Although the Specific Plan would not result in significant transportation impacts, and would result in VMT below the City's baseline, transportation impacts would be reduced under the No Project Alternative when compared to the proposed Specific Plan.

Utilities and Service Systems

Future development within the Specific Plan would result in an increased demand for wastewater, potable water, storm drain, and solid waste services. Under the No Project Alternative, the Plan Area would be designated with the same land use designations as described in the Citrus Heights General Plan and remain in its existing condition. Therefore, it is anticipated that the overall demand for water, wastewater, solid waste, and storm drainage would be reduced under this alternative. As discussed in Section 3.13 (Utilities), the City's preliminary water demand projections for the Plan Area under the Specific Plan were higher than for the existing site.

Under the No Project Alternative, the Plan Area would not increase the demand for any utilities, including wastewater services, potable water supplies, or solid waste disposal. There would be no need to construct stormwater drainage infrastructure. Overall, the demand for utilities would be reduced under the No Project Alternative when compared to the proposed Specific Plan.

REDUCED INTENSITY ALTERNATIVE

Aesthetics and Visual Resources

Under the Reduced Intensity Alternative, the Plan Area would be developed with the same uses over the same area as the proposed Specific Plan, but the FARs and residential densities would be reduced by approximately half. When compared to the Specific Plan, the area of the Plan Area developed with residential uses and non-residential uses would be decreased. Developing the entire Plan Area with 1,110 fewer residential units and 865,240 gross square feet of retail, office and community/institutional would likely result in buildings with equal stories as the Specific Plan. The building setbacks and landscaped areas adjacent to existing and future roadways under this alternative would likely be greater than the Specific Plan, which may increase the visual and aesthetic appeal of the site compared to the Specific Plan. Overall, this alternative would have reduced impacts to aesthetics when compared to the Specific Plan.

Air Quality

As described in Section 3.2, implementation of the Specific Plan would generate emissions during both the construction phase and the operational phase. Construction related impacts would be reduced under this alternative when compared to the Specific Plan, as the area of ground disturbance would be less, and the duration of construction may be slightly reduced. Under this alternative, mobile source emissions would also slightly decrease. Mobile source (vehicle) emissions are directly related to the number of vehicle trips generated by a project. Under this alternative, the residential uses developed on the Plan Area would generate approximately 17,300 fewer daily vehicle trips when compared to the Specific Plan, which would generate lower levels of pollutants from mobile sources. Therefore, this alternative would have reduced impacts related to air quality when compared to the Specific Plan.

Cultural and Tribal Resources

The Reduced Intensity Alternative would result in ground disturbing activities throughout much of the Plan Area. The Specific Plan is not anticipated to result in significant impacts to cultural or historical resources, and the Reduced Intensity Alternative would result in similar risks related to the unintentional discovery of such resources by developing much of the Plan Area with residential and commercial uses. As such, this impact would be comparable to the Sunrise Tomorrow Specific Plan.

Geology and Soils

Under the Reduced Intensity Alternative, the Plan Area would be developed with the same uses over the same area as the proposed Specific Plan, but the FARs and residential densities would be reduced by approximately half. The future development allowed under this alternative would

be exposed to the same level of risk from geologic hazards as the Specific Plan. Therefore, this impact under this alternative would be comparable to the Specific Plan.

Greenhouse Gases, Climate Change, and Energy

Under the Reduced Intensity Alternative, there would be less residential and non-residential development throughout the Plan Area. Implementation of the Plan would generate GHG emissions during construction and operation. Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of a Specific Plan. As noted previously, construction related impacts would be reduced under this alternative when compared to the Specific Plan, as the extent of the development footprint and duration of construction activities would remain relatively similar.

Under the Reduced Intensity Alternative, there would be less residential and non-residential development, resulting in a reduced population and employment and a reduction in the number of vehicle trips generated. Emissions associated with area sources and the mobile greenhouse gas emissions associated with vehicle trips would decrease when compared to the Specific Plan. As such, the greenhouse gas emissions impact would be decreased when compared to the Specific Plan.

While there would be reduced development under this alternative, it is anticipated that energy-saving measures would be similar to the Specific Plan and there would not be a significant change in the potential for wasteful, inefficient, or excessive consumption of energy under this alternative.

Hazards and Hazardous Materials

The Reduced Intensity Alternative is similar to the Specific Plan in that both the Specific Plan and this alternative would result in development of the Plan Area with residential, commercial, hotel and offices uses. As described in Section 3.7, construction activities may result in the use and transport of common hazardous materials, including oils, fuels, paints and solvents. This potential impact would still occur under Reduced Intensity Alternative. Future development under Reduced Intensity Alternative would be subject to the City's General Plan policies, and other local, state, and federal regulations pertaining to hazardous materials. This impact would be similar under this alternative when compared to the Specific Plan.

Hydrology and Water Quality

Under the Lower Density Alternative, future development in the Plan Area would occur similar to what would be allowed under the proposed Specific Plan of the West Area, but at lower densities. The Reduced Intensity Alternative would reduce development by 1,110 residential units, 240 hotel rooms, and 865,000 gross square feet of retail and office space compared to the Specific Plan and result in an increase in permanent open space. This alternative would result in a reduced amount of land covered with impervious surfaces compared to the Specific Plan. The storm drainage system would be designed to ensure that post-construction runoff volumes do not exceed pre-development conditions similar to the Specific Plan. Because the alternative

would be required to implement improvements in order to manage and treat stormwater flows from the site, impacts related to water quality would be similar.

As described in Section 3.7, Specific Plan implementation has the potential to result in the discharge of pollutants into existing surface water courses and storm drains, and would change the existing drainage pattern on the site, although these impacts are less than significant as a result of compliance with local, state, and federal regulations. Under the Reduced Intensity Alternative, these impacts would be similar to the Specific Plan. Overall, potential impacts related to hydrology and water quality would not be significantly improved under Reduced Intensity Alternative when compared to the Specific Plan.

Land Use and Planning

Under the Reduced Intensity Alternative, the Plan Area would be developed with similar uses as the Specific Plan. The analysis in Section 3.8 concluded that the Specific Plan would not result in any significant land use impacts. Similarly, this alternative could be designed to be consistent with the General Plan. The decrease in units and decreased development footprint associated with this alternative would not conflict with the adopted MTP/SCS as this alternative would result in comparable residential net densities on the Plan Area when compared to the Developing Community assumptions for the Plan Area. Therefore, this alternative would have similar impacts compared to the Specific Plan.

Noise

As described in Section 3.9, the primary sources of noise associated with implementation of the Specific Plan are from increased vehicle trips on study area roadways in the Specific Plan vicinity from on-site uses, and increased noise from future operation within the Plan Area. The Specific Plan is estimated to generate approximately 34,600 new daily trips. Under this alternative, noise associated with vehicle trips is expected to decrease by approximately 17,300 daily trips due to the decrease in residential units, while other on-site noise sources would likely be comparable to those generated by the Specific Plan. This alternative would generate fewer daily vehicle trips and peak hour trips, which would generate decreased noise levels on area roadways. Similar to the Specific Plan, this alternative would expose future residential uses to noise sources; however, impacts would be less than significant with implementation of mitigation. Overall, due to the decrease in anticipated vehicle trips, this impact would be decreased under this alternative when compared to the Specific Plan.

Population and Housing

This alternative would result in the construction of fewer housing units over a smaller area than the Specific Plan. As discussed in Section 3.11, the Specific Plan would be a residential and commercial mixed use development, resulting in the addition of up to 2,220 residential units in total. This would allow for a maximum population of approximately 5,794 residents.

Under Reduced Intensity Alternative, the Plan Area would be developed with up to 1,110 units. While this alternative would add fewer residents as compared with the Specific Plan, impacts

related to population and housing would be comparable to the Specific Plan as neither this alternative nor the Specific Plan would conflict with applicable population forecasts.

Public Services and Recreation

This alternative would result in a decrease in the number of housing units by 1,110 units. As described in Section 3.12, implementation of the Specific Plan would result in an increase in demand for police and fire protection services, as well as increased demand for schools, parks, and other public facilities. As discussed previously, there would be a reduction in the population generated under this alternative when compared to the Specific Plan. As such, this alternative would have a decreased demand for public services compared to the Specific Plan and a decrease in the amount of park area required to serve the Specific Plan. Similar to the Specific Plan, this alternative would not result in need for construction, relocation, or expansion of facilities for public services and recreation, other than the park and recreation uses proposed as part of the alternative. Because this alternative would decrease demand for public services and would require less parkland than the Specific Plan, physical environmental impacts related to public services and recreation would be slightly less than the Specific Plan.

Transportation and Circulation

As described above, this alternative would result in a decrease in total daily vehicle trips when compared to the Specific Plan, which would in turn decrease the peak hour AM and PM vehicle trips. The Specific Plan is estimated to generate up to 34,600 new daily trips, with 1,960 and 2,570 trips occurring during the AM and PM peak hours, respectively. Under this alternative, the decrease in residential units would result in a reduction of half, approximately 17,300, new daily trips. The trip generation for this alternative was calculated using the same trip generation rates as the Specific Plan that are based on policies from the City's *TIS Guidelines* (2020). The related decrease in AM and PM peak hour trips under this alternative would generate decreased traffic levels on area roadways when compared to the Specific Plan. This has the potential to decrease impacts to area roadways and intersections. The potentially significant impacts would not be avoided under this alternative. Overall, impacts related to traffic and circulation associated with roadway operations would be decreased under this alternative when compared to the Specific Plan.

Utilities and Service Systems

Both the Specific Plan and this alternative would be served by the CHWD, SASD and Republic Services. The decrease in residential units and retail square footage under this alternative would decrease the wastewater treatment and water demand compared to the Specific Plan. Development under the Reduced Intensity Alternative would also result in a decrease in solid waste generation within the Plan Area due to the decrease in residential units and retail square footage. Because the Reduced Intensity Alternative would result in a decreased amount of development compared to the Specific Plan, water demand would also decrease. Overall, this alternative would have less impacts to utilities when compared to the Specific Plan.

REDUCED AREA ALTERNATIVE

Aesthetics and Visual Resources

Under the Reduced Area Alternative, the Plan Area would be developed with the same uses with a reduction in area as compared to the proposed Specific Plan. When compared to the Specific Plan, the area of the Plan Area developed with residential uses and non-residential uses would be decreased. Overall, this alternative would have reduced impacts to aesthetics when compared to the Specific Plan.

Air Quality

As described in Section 3.2, implementation of the Specific Plan would generate emissions during both the construction phase and the operational phase Construction related impacts would be reduced under this alternative when compared to the Specific Plan, as the area of ground disturbance would be less, and the duration of construction may be slightly reduced. Under this alternative, mobile source emissions would also slightly decrease. Mobile source (vehicle) emissions are directly related to the number of vehicle trips generated by a project. Under this alternative, the residential uses developed on the Plan Area would generate fewer daily vehicle trips when compared to the Specific Plan, which would generate lower levels of pollutants from mobile sources. Therefore, this alternative would have reduced impacts related to air quality when compared to the Specific Plan.

Cultural and Tribal Resources

The Reduced Area Alternative would result in reduced ground disturbing activities throughout much of the Plan Area. The Specific Plan is not anticipated to result in significant impacts to cultural or historical resources, and the Reduced Area Alternative would result in similar risks related to the unintentional discovery of such resources by developing much of the Plan Area with residential and commercial uses. As such, this impact would be comparable to the Specific Plan.

Geology and Soils

Under this alternative, the Plan Area would be developed with the same uses with the same FARs and residential densities as the proposed Specific Plan, but the Plan Area would be reduced by approximately half. The future development allowed under this alternative would be exposed to the same level of risk from geologic hazards as the Specific Plan. Therefore, this impact under this alternative would be comparable to the Specific Plan.

Greenhouse Gases, Climate Change, and Energy

Under the Reduced Area Alternative, fewer housing units and non-residential space would be constructed throughout the Plan Area. Implementation of the Specific Plan would generate GHG emissions during construction and operation. Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of a project. As noted previously, construction related impacts would be

slightly reduced under this alternative when compared to the Specific Plan, as the extent of the development footprint and duration of construction activities would be reduced slightly.

Under the Reduced Area Alternative, there would be less residential and non-residential development, resulting in a reduced population and employment and a reduction in the number of vehicle trips generated. As such, the mobile greenhouse gas emissions would decrease when compared to the Specific Plan and the greenhouse gas emissions impact would be decreased when compared to the Specific Plan.

While there would be reduced development under this alternative, it is anticipated that energy-saving measures would be similar to the Specific Plan and there would not be a significant change in the potential for wasteful, inefficient, or excessive consumption of energy under this alternative.

Hazards and Hazardous Materials

The Reduced Area Alternative is similar to the Specific Plan in that both the Specific Plan and this alternative would result in development of the Plan Area with residential, commercial, and park uses. However, the Plan Area would be reduced by approximately half in this alternative. As described in Section 3.6, construction activities may result in the use and transport of common hazardous materials, including oils, fuels, paints and solvents. This potential impact would still occur under Reduced Area Alternative. Additionally, the operational phases of both the Specific Plan and Reduced Area Alternative would not pose a significant hazard to the public or the environment. Future development under Reduced Area Alternative would be subject to the City's General Plan policies, and other local, state, and federal regulations pertaining to hazardous materials. This impact would be similar under this alternative when compared to the Specific Plan.

Hydrology and Water Quality

The Reduced Area Alternative would reduce development by 1,110 residential units and 432,500 square feet of non-residential area compared to the Specific Plan.

This alternative would result in the preservation of land currently covered with impervious surfaces compared to the Proposed Plan, which includes bioswale and large permeable green surfaces that would reduce long term impacts to surface water quality. Nevertheless, the storm drainage system would be designed to ensure that post-construction runoff volumes do not exceed pre-development conditions similar to the Specific Plan.

Because the alternative would be required to implement improvements in order to manage and treat stormwater flows from the site, impacts related to water quality would be similar. However, this alternative would have slightly greater impacts to hydrology and water quality when compared to the Specific Plan because it converts less area to permeable green surface.

Land Use and Planning

Under the Reduced Area Alternative, the Plan Area would be developed with similar uses as the Specific Plan. The analysis in Section 3.8 concluded that the Specific Plan would not result in any significant land use impacts. The decrease in units and decreased development footprint associated with this alternative would not conflict with the adopted MTP/SCS and would result in comparable residential net densities on the Plan Area when compared to the Developing Community assumptions for the Plan Area. Reduced Area Alternative would also not result in significant land use impacts. Therefore, this alternative would have similar impacts to the Specific Plan.

Noise

As described in Section 3.9, traffic circulation, parking areas, and amplified music or speech in Sunrise Commons Park are considered to be the primary noise sources for the proposed Specific Plan. Additionally, community plazas and gathering areas are substantial noise-generating components. The Specific Plan is estimated to generate approximately 34,600 new daily trips. Under this alternative, noise associated with vehicle trips is expected to decrease by approximately 17,300 daily trips due to the decrease in residential units, while other on-site noise sources would likely be comparable to those generated by the Specific Plan. Overall, due to the decrease in anticipated vehicle trips, this impact would be decreased under this alternative when compared to the Specific Plan.

Population and Housing

This alternative would result in the construction of fewer housing units over a comparable area as the Specific Plan. As discussed in Section 3.10, the Specific Plan would be a residential and commercial mixed use development, resulting in the addition of up to 2,220 residential units in total. This would allow for a maximum population of approximately 5,794 residents, based on the number of units planned for development.

Under Reduced Area Alternative, the Plan Area would be developed with 1,110 fewer single-family units than the Specific Plan and half of the area for non-residential space. While this alternative would add fewer residents as compared with the Specific Plan, impacts related to population and housing would be comparable to the Specific Plan as neither this alternative nor the Specific Plan would conflict with applicable population forecasts.

Public Services and Recreation

This alternative would result in a decrease in the number of housing units by 1,110 units compared to the Specific Plan. As described in Section 3.11, implementation of the Specific Plan would result in an increase in demand for police and fire protection services, as well as increased demand for schools, parks, and other public facilities. As discussed previously, there would be a reduction in the population generated under this alternative when compared to the Specific Plan. As such, this alternative would have a decreased demand for public services compared to the Specific Plan and, similar to the Specific Plan, not result in need for construction, relocation, or expansion of facilities for public services and recreation, other than

the park and recreation uses proposed as part of the alternative. Therefore, physical environmental impacts related to public services and recreation would be comparable to the Specific Plan.

Transportation and Circulation

As described above, this alternative would result in a decrease in total daily vehicle trips when compared to the Specific Plan, which would in turn decrease the peak hour AM and PM vehicle trips. The Specific Plan is estimated to generate up to 34,600 new daily trips, with 1,960 and 2,570 trips occurring during the AM and PM peak hours, respectively. Under this alternative, the decrease in residential units would result in a reduction of half, approximately 17,300, new daily trips. The trip generation for this alternative was calculated using the same trip generation rates as the Specific Plan that are based on policies from the City's *TIS Guidelines* (2020). The related decrease in AM and PM peak hour trips under this alternative would generate decreased traffic levels on area roadways when compared to the Specific Plan. This has the potential to decrease impacts to area roadways and intersections. The potentially significant impacts would not be avoided under this alternative. Overall, impacts related to traffic and circulation associated with roadway operations would be decreased under this alternative when compared to the Specific Plan.

Utilities and Service Systems

Both the Specific Plan and this alternative would be served by the CHWD, SASD and Republic Services. The decrease in residential units and retail square footage under this alternative would decrease the wastewater treatment and water demand compared to the Specific Plan. Development under the Reduced Area Alternative would also result in a decrease in solid waste generation within the Plan Area due to the decrease in residential units and retail square footage. Because the Reduced Area Alternative would result in less development compared to the Specific Plan, water demand would also decrease. Overall, this alternative would have less impacts to utilities when compared to the Specific Plan.

ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires that an environmentally superior alternative be identified among the alternatives that are analyzed in the EIR. If the No Project Alternative is the environmentally superior alternative, an EIR must also identify an environmentally superior alternative among the other alternatives (CEQA Guidelines Section 15126.6(e)(2)). The environmentally superior alternative is that alternative with the least adverse environmental impacts when compared to the Specific Plan.

A comparative analysis of the Specific Plan and each of the Specific Plan alternatives is provided in Table 5.0-2 below. The table includes a numerical scoring system, which assigns a score of "2," "3," or "4" to the Specific Plan and each of the alternatives with respect to how each alternative compares to the Specific Plan in terms of the severity of the environmental topics addressed in this EIR. A score of "2" indicates that the alternative would have a better (or lessened) impact when compared to the Specific Plan. A score of "3" indicates that the

alternative would have the same (or equal) level of impact when compared to the Specific Plan. A score of "4" indicates that the alternative would have a worse (or greater) impact when compared to the Specific Plan. The Specific Plan alternative with the lowest total score is considered the environmentally superior alternative.

TABLE 5.0-2: COMPARISON OF ALTERNATIVE PROJECT IMPACTS TO THE PROJECT

ENVIRONMENTAL ISSUE	*SPECIFIC PLAN*	*NO PROJECT ALTERNATIVE*	*REDUCED INTENSITY ALTERNATIVE*	*REDUCED AREA ALTERNATIVE*
Aesthetics and Visual Resources	3 – Same	3 – Same	3 – Same	3 – Same
Air Quality	3 – Same	2 – Less	2 – Less	2 – Less
Cultural and Tribal Resources	3 – Same	3 – Same	3 – Same	3 – Same
Geology and Soils	3 – Same	2 – Less	3 - Same	3 - Same
Greenhouse Gas, Climate Change, and Energy	3 – Same	2 – Less	3 – Same	3 – Same
Hazards and Hazardous Materials	3 – Same	2 – Less	3 – Same	3 – Same
Hydrology and Water Quality	3 – Same	4- Greater	3 – Same	4- Greater
Land Use and Planning	3 – Same	2 – Less	3 – Same	3 – Same
Noise	3 – Same	2 – Less	2 – Less	2 – Less
Population and Housing	3 – Same	2 – Less	2 – Less	2 – Less
Public Services and Recreation	3 – Same	3 - Same	2 – Less	2 – Less
Transportation and Circulation	3 – Same	2 – Less	2 – Less	2 – Less
Utilities and Service Systems	3 – Same	3 - Same	2 – Less	2 – Less
Summary	**39**	**32**	**33**	**34**

Table 5.0-2 presents a comparison of the alternative Specific Plan impacts with those of the proposed Specific Plan. As shown in the table, the No Project Alternative would result in 32 points, Reduced Intensity Alternative would result in 33 points, and Reduced Area Alternative would result in 34 points. The No Project Alternative is the environmentally superior alternative. However, as required by CEQA, when the No Project Alternative is the environmentally superior alternative, the environmentally superior alternative among the others must be identified. Because the Reduced Intensity Alternative would reduce the extent of development more than the Reduced Area Alternative, the impacts associated with hydrology and water quality would be reduced more with the Reduced Intensity Alternative. Therefore, the Reduced Intensity Alternative is the next environmentally superior alternative to the Specific Plan. It is noted that the superior alternative would depend on the City's local priorities (i.e., traffic impacts to the regional roadway system, maintenance of public services and utilities services, etc.), as well as the ability to meet the Specific Plan's objectives. However, neither the Reduced Intensity Alternative nor the Reduced Area Alternative fully meet all of the Specific Plan objectives. See Section 5.4 below for a comparative evaluation of the objectives for each alternative.

5.4 COMPARATIVE EVALUATION OF THE ALTERNATIVES' ABILITY TO SATISFY PROJECT OBJECTIVES

This section examines how each of the alternatives selected for more detailed analysis meets the Specific Plan objectives.

1. *Create an economic engine with environments that promote economic activity and job creation by providing a mix of creative office space, food, dining, and entertainment.*

The No Project Alternative would not satisfy this Project objective because under this alternative, the Plan Area would remain in its current existing condition and would not provide additional office space, food, dining, or entertainment which would promote economic activity and job creation. Under the Reduced Intensity Alternative, the Plan Area would be developed with the same uses over the same area as the proposed Specific Plan, but with a reduction in the amount and intensity of residential and non-residential development by 1,110 residential units, 240 hotel rooms, and 865,000 gross square feet of retail and office space compared to the Specific Plan. This alternative would meet this objective, but to a lesser extent than the proposed Specific Plan due to the reduction in development potential under this alternative. Under Reduced Area Alternative, the Plan Area would be developed with the same uses with the same FARs and residential densities as the proposed Specific Plan, but the Plan Area would be reduced by approximately half. Similar to the Reduced Intensity Alternative, this alternative would meet this objective, but to a lesser extent than the proposed Specific Plan due to the reduction in development potential under this alternative.

2. *Design a dynamic Main Street and community gathering space by providing an abundance of open space for event programming and a strategically located main street in the core of the Plan Area.*

The No Project Alternative would not satisfy this objective because under this alternative, a Main Street and community gathering spaces would not be provided. The Reduced Intensity Alternative and the Reduced Area Alternative would both provide a Main Street and community gathering spaces, though the amount of community spaces would decrease compared to the Specific Plan due to the reduced nature of both alternatives. Therefore, the Reduced Intensity Alternative and Reduced Area Alternative would meet this objective but to a lesser extent than the proposed Specific Plan.

3. *Establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns.*

The No Project Alternative would not satisfy this objective because this alternative would maintain the Plan Area in its existing condition and would not develop any additional parks, plazas, or streets. The Reduced Intensity Alternative and Reduced Area Alternative would meet this objective because these alternatives would provide additional parks, plazas, or streets to promote health activities. However, because these alternatives would reduce the amount of open space and additional landscaping, this objective would be met to a lesser extent than the proposed Specific Plan.

4. *Provide safe, convenient, and accessible access to high quality transit corridors with frequent headways and enhanced transit stops.*

All three alternatives would achieve this objective because all of the alternatives would provide safe access to transit corridors in and around the Plan Area. However, the No Project Alternative would not enhance the transit stops along the Plan Area boundaries; as such, the No Project Alternative would only partially achieve this objective.

5. *Include streets designed for people, with a network of safe and slow speed streets that serve pedestrians and cyclists while allowing vehicular access and enhancing mobility, in order to reduce vehicle-miles-traveled (VMT) and associated greenhouse gas and criteria pollutant emissions.*

The No Project Alternative would not achieve this object because this alternative would not modify the street design in the Plan Area in order to serve pedestrians and cyclists. The Reduced Intensity Alternative and Reduced Area Alternative would meet this objective because both alternatives would include streets that serve pedestrians, cyclists, and vehicles. These two alternatives would also aim to reduce VMT and associated greenhouse gas and criteria pollutant emissions because both alternatives would provide a mix of uses along a transit corridor.

6. *Create connected communities with various housing options and high quality of life by providing townhomes, lifestyle housing, senior housing, and mixed use residential.*

The No Project Alternative would not satisfy this objective because no residential uses currently exist within the Plan Area, and none would be constructed under this alternative. The Reduced Intensity Alternative and Reduced Area Alternative would meet this objective but to a lesser extent than the proposed Specific Plan because both alternatives would reduce the number of residential units compared to the Specific Plan.

7. *Provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential.*

Similar to objective number six above, the No Project Alternative would not satisfy this objective because no residential uses would be constructed under this alternative. While the Reduced Intensity Alternative and Reduced Area Alternative would both provide a variety of housing product choices, both alternatives would reduce the number of residential units compared to the Specific Plan. As such, the Reduced Intensity Alternative and Reduced Area Alternative would meet this objective but to a lesser extent than the proposed Specific Plan.

8. *Allow for phased development and infrastructure improvements to respond to market demand while requiring infrastructure and public facilities necessary to serve the project's needs.*

The No Project Alternative would not meet this objective because no infrastructure improvements would be developed. The Reduced Intensity Alternative and Reduced Area

Alternative would achieve this objective because each alternative would result in phased development and infrastructure improvements required to serve the development.

9. *Transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with City General Plan Policy 12.3.*

The No Project Alternative would not satisfy this objective because under this alternative, the site would remain in its current existing condition and would not be transformed into a regional destination. Both the Reduced Intensity Alternative and Reduced Area Alternative would achieve this objective but to a lesser extent than the proposed Specific Plan because both alternatives would reduce the amount of development compared to the Specific Plan. The reduced development under these two alternatives would result in a less vibrant regional destination.

REPORT PREPARERS

City of Citrus Heights

Casey Kempenaar ..... Planning Manager

Leslie Blomquist ..... City Engineer

Meghan Huber ..... Economic Development and Communications Manager

Colleen McDuffee ..... Community Development Director

Ardelyn Flores ..... Associate Civil Engineer

APPENDIX A

Initial Study, Notice of Preparation, and NOP Comments

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING

DATE: August 7, 2020

TO: State Clearinghouse
State Responsible Agencies
State Trustee Agencies
Other Public Agencies
Organizations and Interested Persons

SUBJECT: Notice of Preparation of an Environmental Impact Report and Scoping Meeting for the Sunrise Tomorrow Specific Plan

LEAD AGENCY: City of Citrus Heights
6360 Fountain Square Drive
Citrus Heights, CA 95621

PROJECT PLANNER: Casey Kempenaar, Planning Manager
ckempenaar@citrusheights.net
(916) 727-4740

PURPOSE OF NOTICE: This is to notify public agencies and the general public that the City of Citrus Heights, as the Lead Agency, will prepare an Environmental Impact Report (EIR) for the Sunrise Tomorrow Specific Plan. The City of Citrus Heights is interested in the input and/or comments of public agencies and the public as to the scope and content of the environmental information that is germane to the agencies' statutory responsibilities in connection with the proposed Specific Plan, and public input. Responsible/trustee agencies will need to use the EIR prepared by the City of Citrus Heights when considering applicable permits, or other approvals for the proposed Specific Plan.

COMMENT PERIOD: Consistent with the time limits mandated by State law, your input, comments or responses must be received in writing and sent at the earliest possible date, but not later than 5:00 PM, September 8, 2020.

Please send your comments/input (including the name for a contact person in your agency) to: Attn: Casey Kempenaar, Planning Manager at the City of Citrus Heights, 6360 Fountain Square Drive, Citrus Heights, CA 95621; or by e-mail to ckempenaar@citrusheights.net.

SCOPING MEETING: On Tuesday, August 25, the City of Citrus Heights will conduct a public scoping meeting to solicit input and comments from public agencies and the general public on the proposed Specific Plan and scope of the EIR. Due to COVID-19, this meeting will be held on-line from 5:00 PM to 6:00 PM.

This meeting will be held on-line via a Zoom Webinar, and interested parties may join the Zoom Webinar to review the proposed Specific Plan exhibits and submit on-line comments at any time between 5:00 PM and 6:00 PM. Representatives from the City of Citrus Heights and the EIR consultant team will be available via the Zoom Webinar to address questions regarding the EIR process and scope. Members of the public may provide on-line comments throughout the Zoom Webinar. Attendees may register for the Zoom Webinar at:

http://www.citrusheights.net/1071/Sunrise-Tomorrow-Environmental-Review

If you have any questions regarding the scoping meeting, contact Casey Kempenaar, Planning Manager, at (916) 727-4740 or ckempenaar@citrusheights.net.

PROJECT LOCATION AND SETTING: The Sunrise Tomorrow Specific Plan Area (Plan Area) is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California (see Figure 1). Citrus Heights is located within the northernmost portion of Sacramento County, approximately 10 miles northeast of downtown Sacramento, along Interstate 80 between Sacramento and Roseville (see Figure 2).

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 3). The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 180 feet above mean sea level (MSL).

PROJECT DESCRIPTION: The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan also includes a circulation and open space network to support the future land uses. See Figure 4 for the illustrative site plan, which shows an overview of the Plan Area, street network, and open space network.

For more details regarding the project background, phasing plan, development allowance, land uses, street network, vehicular circulation, pedestrian and bicycle network, open space network, sustainability features, and utilities, please see the Project Description in the attached Initial Study.

PROJECT APPROVALS: The City of Citrus Heights is the Lead Agency for the proposed Specific Plan, pursuant to the State Guidelines for Implementation of CEQA, Section 15050.

This document will be used by the City of Citrus Heights to take the following actions:

- Approval of the Specific Plan;
- Approval of the General Plan Amendment to change the land use designation of the entire Plan Area from General Commercial to Marketplace Mixed Use;
- Approval of the rezone of the entire Plan Area from Shopping Center to Special Planning Area;
- Future building, grading, and other permits as necessary for future construction;

- Certification of the EIR;
- Adoption of the Mitigation Monitoring and Reporting Program (MMRP).

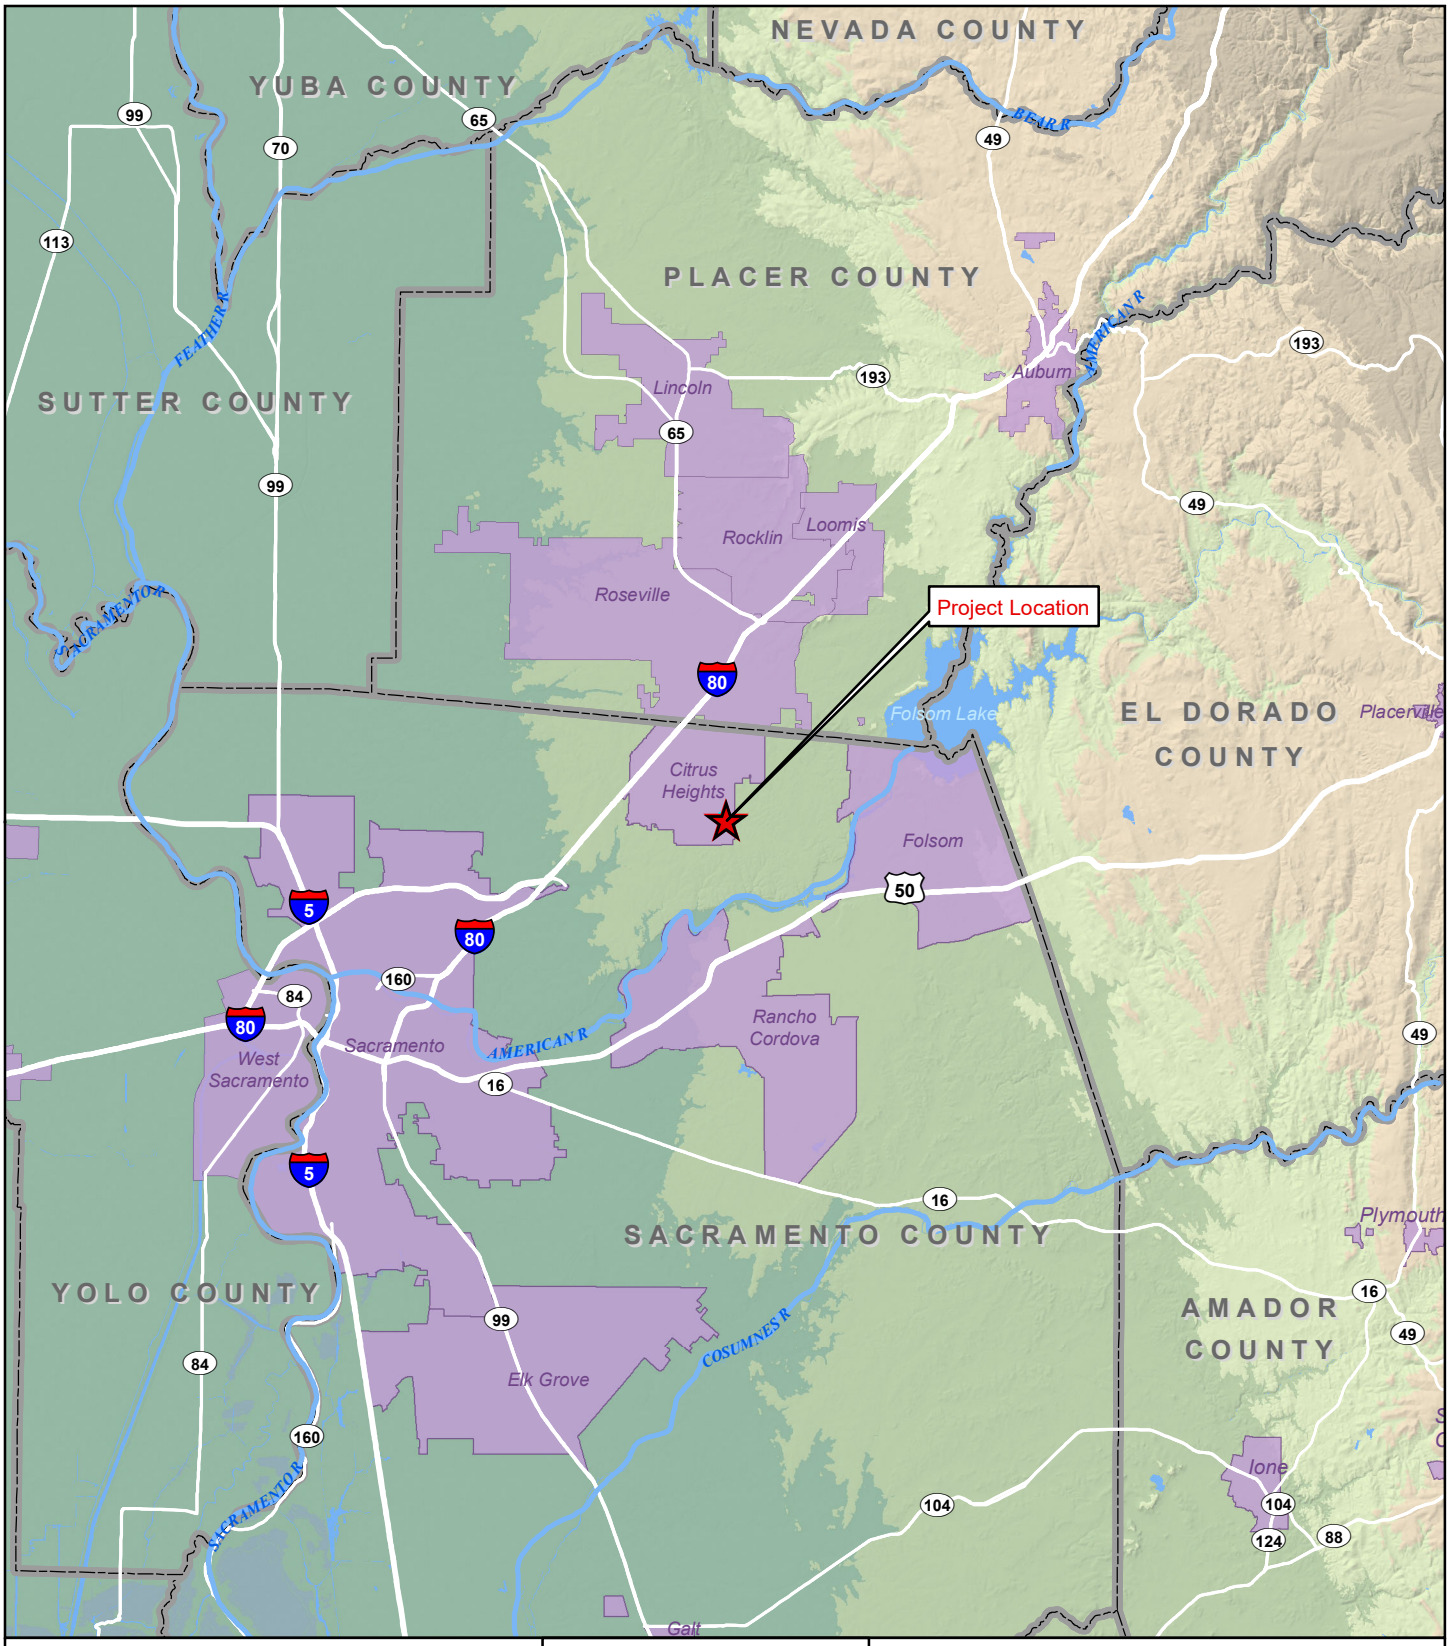
The following agencies may be required to issue permits or approve certain aspects of the proposed Specific Plan:

- Regional Water Quality Control Board (RWQCB) – Construction activities would be required to be covered under the National Pollution Discharge Elimination System (NPDES);
- RWQCB – A Storm Water Pollution Prevention Plan (SWPPP) would be required to be approved prior to construction activities pursuant to the Clean Water Act;
- California Department of Fish and Wildlife (CDFW) – Section 1600 permit for creek restoration;
- U.S. Army Corps of Engineers (USACE) – Section 404 permit for creek restoration;
- Sacramento Metropolitan Air Quality Management District (SMAQMD) – Construction activities would be subject to the SMAQMD rules and regulations;
- Citrus Heights Water District – Approval of infrastructure details for water supply facilities; and
- Sacramento Area Sanitation District – Approval of infrastructure details for wastewater collection facilities.

AREAS OF POTENTIAL IMPACTS: The Draft EIR will examine most of the environmental areas contained in Appendix G of the State CEQA Guidelines. The topics to be addressed in the Draft EIR include the following:

- Aesthetics
- Air Quality
- Cultural and Tribal Resources
- Geology and Soils
- Greenhouse Gases, Climate Change, and Energy
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services and Recreation
- Transportation
- Cumulative Impacts
- Growth Inducing Impacts

INITIAL STUDY: An Initial Study has been prepared for this Specific Plan. The Initial Study identifies environmental areas/issues that would result in No Impact or a Less than Significant Impact, and environmental areas/issues that would result in a Potentially Significant Impact. All Potentially Significant Impact areas/issues will be addressed in greater detail in the Draft EIR. Areas/issues that would result in No Impact or a Less than Significant Impact, as identified in the Initial Study, will not be addressed further in the Draft EIR.



ADDITIONAL INFORMATION: A copy of the Initial Study is available on the City's website at:

https://www.citrusheights.net/1071/Sunrise-Tomorrow-Environmental-Review

(916) 727-4740

PROJECT SPONSOR'S NAME AND ADDRESS

City of Citrus Heights
6360 Fountain Square Drive
Citrus Heights, CA 95621

PROJECT LOCATION AND SETTING

The Sunrise Tomorrow Specific Plan Area (Plan Area) is located at the southeast corner of Sunrise Boulevard and Greenback Lane in Citrus Heights, California (see Figure 1). Citrus Heights is located within the northernmost portion of Sacramento County, approximately 10 miles northeast of downtown Sacramento, along Interstate 80 between Sacramento and Roseville (see Figure 2).

The Plan Area is part of the Sunrise Marketplace Business Improvement District (BID). The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 3). The Plan Area is surrounded by residential development to the south, a mix of residential and commercial development to the east, and commercial development directly to the north and west. The elevation of the site ranges from approximately 170 feet to 180 feet above mean sea level (MSL).

PROJECT BACKGROUND

Since opening in 1972, Sunrise Mall has been a major commercial and social center of Citrus Heights, and generations of residents and visitors have patronized its many businesses and community events. Sunrise Mall is also an economic center for the City of Citrus Heights, providing hundreds of jobs and generating sales tax revenue that funds services for Citrus Heights residents.

The City of Citrus Heights recognizes the importance of Sunrise Mall within the community and aims to ensure that the Plan Area continues to be a regional and local destination. Given the changing retail environment and economic conditions, planning for the mall's future is a key step to ensuring the continued success of the city's core. In July 2019, the City Council adopted an Amendment to the General Plan that requires the development of a Specific Plan for the Sunrise Mall property to guarantee a comprehensive plan for future redevelopment of the mall. In October 2019, the city and its consultants began the process of developing a specific plan.

The proposed Sunrise Tomorrow Specific Plan is the result of a collaborative planning effort to develop a shared vision for the future of the heart of Citrus Heights. The project team studied the existing planning context, documented existing site conditions, and analyzed the current market conditions in Citrus Heights and the greater Sacramento region. Throughout each phase of the project, opportunities were provided for the community to interact with the team and review the progress of the Plan. The community was encouraged to provide ideas and share feedback both on-line and in-person. The project team used this feedback to develop a vision statement, identifying the shared goals and aspirations for the project. Several plan options were developed, representing different ways of organizing development on the site in accordance with the vision. Metrics were provided for each of the options, including an economic impact analysis, which allowed for the city to evaluate the alternatives and identify a preferred option that best represents the shared goals and aspirations of stakeholders in a financially-viable and implementable way. The preferred option was then refined into a Specific Plan Concept and the project team prepared the Draft Specific Plan for review by the city and the community. Once approved, a final Specific Plan and Environmental Impact Report (EIR) will entitle the Plan Area.

PROJECT DESCRIPTION

The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan also includes a circulation and open space network to support the future land uses. See Figure 4 for the illustrative site plan, which shows an overview of the Plan Area, street network, and open space network.

PLANNING AREAS

As shown in Figure 5, the Plan Area is divided into six Planning Areas:

1. **Planning Area 1 (PA-1):** Located in the northwestern corner of the Plan Area, PA-1 is envisioned to be an employment anchor with office space. Other uses include a hotel and retail uses.
2. **Planning Area 2 (PA-2):** Located in the west-central portion of the Plan Area, PA-2 is envisioned as the "Mixed-Use Core", to be developed with retail, restaurants, office, multi-family residential units and a hotel all positioned around the Sunrise Commons central gathering space and the main street.
3. **Planning Area 3 (PA-3):** Located in the southwestern corner of the Plan Area, PA-3 is envisioned as the "Anchor Entertainment" with retail and entertainment uses. In addition, the Planning Area is envisioned as a residential hub with stacked flats, townhouses, and senior housing units.
4. **Planning Area 4 (PA-4):** Located in the southeastern portion of the Plan Area, PA-4 is envisioned as "Anchor Retail and Mixed-Use" with retail uses along the main street A portion of PA-4 would also feature town houses.
5. **Planning Area 5 (PA-5):** Located in the east-central portion of the Plan Area, PA-5 is envisioned as "Anchor Retail and Mixed-Use" along the main street with retail uses. A portion of PA-5 would also feature town houses.
6. **Planning Area 6 (PA-6):** Located in the northeastern corner of the Plan Area, PA-6 is envisioned to contain a hotel and restaurant uses.

DEVELOPMENT ALLOWANCE

The Specific Plan would establish a Maximum Development Allowance and Maximum Development by Land Use for each Planning Area. The Maximum Development Allowance by

Planning Area is inclusive of all uses, and may not be exceeded without a Specific Plan Amendment.

Within each Planning Area, a maximum square footage would be established for all retail, office, community/institutional uses. For residential uses, a maximum number of dwelling units and for hotel uses a maximum number of rooms would be established. See Table 1 for the maximum development allowance and Table 2 for the maximum development allowance by land use.

Table 1: Maximum Development Allowance

Planning Area	*Total*	*PA-1*	*PA-2*	*PA-3*	*PA-4*	*PA-5*	*PA-6*
Ownership	--	Namdar	Namdar	Seritage	Namdar	JCPenney	Kuen
Gross Site Area (Acres)	*95.8*	17.2	23.3	1.3	12.7	18.1	3.2
Net Site Area (Acres)*	*74.4*	14.5	16.3	14.8	11.0	13.9	3.2
Effective FAR**	*1.0*	0.70	1.55	0.75	1.0	1.0	0.5
Maximum Development (GSF)	*3,200,000*	445,000	1,110,000	485,000	480,000	610,000	70,000

NOTES: GSF = GROSS SQUARE FEET.
**EXCLUDES INTERNAL ROADS.*
***CALCULATED BASED ON NET SITE AREA. FOR INFORMATION ONLY, MAXIMUM ALLOWED DEVELOPMENT DENOMINATED IN GROSS SQUARE FEET (GSF).*
SOURCE: GENSLER, 2020.

Table 2: Maximum Development by Land Use*

Planning Area	*Total*	*PA-1*	*PA-2*	*PA-3*	*PA-4*	*PA-5*	*PA-6*
Ownership	--	Namdar	Namdar	Seritage	Namdar	JCPenney	Kuen
Residential (Units)	*2,220*	220	620	360	480	540	0
Hotel (Rooms)	*480*	120	240	0	0	0	120
Retail (GSF)	*320,000*	60,000	160,000	52,000	20,000	20,000	8,000
Office (GSF)	*960,000*	280,000	220,000	0	220,000	240,000	0
Community/Institutional (GSF)	*450,000*	24,000	34,000	12,000	160,000	220,000	8,000

NOTES: GSF = GROSS SQUARE FEET.
**MAXIMUM DEVELOPMENT BY LAND USE EXCLUDES THE AREA OCCUPIED BY EXISTING USES WHILE THEY CONTINUE TO OPERATE; HOWEVER, THE TOTAL BUILDING AREA (INCLUDING EXISTING AND NEW DEVELOPMENT) MAY NOT EXCEED THE MAXIMUM DEVELOPMENT ALLOWED PER PLANNING AREA.*
SOURCE: GENSLER, 2020.

As shown in Table 2, the 95.8-acre Plan Area could be developed with up to 2,220 residential dwelling units (DU), up to 480 hotel rooms, up to 320,000 square feet (SF) of retail uses, up to 960,000 SF of office uses, and up to 450,000 SF of community/institutional land uses.

LAND USES

The proposed land use map is shown in Figure 6. The Specific Plan would define allowed land uses to ensure a mix of development that supports a livable urban neighborhood. Proposed land uses (including potential product types) include:

- **Residential:** Townhouses, multi-family lifestyle units (apartments, flats, and mixed use), and senior housing units.
- **Retail / Food / Beverage:** Anchor retail department stores, ground floor retail stores, movie theatres, music venues, grocery stores, restaurants, breweries, and bars.
- **Mixed Use:** Residential lofts above ground floor retail and office uses above ground floor retail.
- **Office:** Creative offices, tech offices, professional offices, and coworking spaces.
- **Community / Institutional:** Child care centers, gyms, and community centers.
- **Hotel:** Conference center hotel, boutique hotel, and extended stay hotel.

- **Parking Structure:** Surface parking, standalone parking structures, and wrapped parking structures.

STREET NETWORK

The proposed street network is shown in Figure 7. The Specific Plan would establish a network of pedestrian and bicycle routes, allowing for easy access across the site. Proposed street typologies include:

- **Main Street:** Allows for flexible space that can easily be closed off for special events**.**
- **Primary Roads:** Allow for high capacity circulation with two lanes in each direction.
- **Primary Entries:** Allow for high capacity ingress and egress with two lanes in each direction.
- **Secondary Roads:** Allow for local circulation with one lane in each direction.
- **Secondary Entries:** Allow for moderate capacity ingress and egress with one lane ingress and egress.
- **Green Loop Pedestrian / Multi-use Trail:** Protected bike and walking path connecting between the project and surrounding land uses and within the project.

VEHICULAR CIRCULATION

The proposed vehicular circulation network is shown in Figure 8. The Specific Plan would provide for safe and efficient vehicular circulation. Proposed vehicular improvements and typologies include:

- **Vehicle Roadways:** Allow for efficient vehicular circulation of the site and create connections between the project and surrounding land uses and within the project.
- **Driveways & Entry Points:** Access points to various destinations within the site.
- **Loading:** Service access for delivery trucks.
- **Drop Off:** Access for rideshare pickup and drop off.
- **Primary Vehicular Entries:** Allow for two lanes in each direction.
- **Secondary Vehicular Entries:** Allow for one lane in each direction.
- **New Traffic Signal:** A traffic signal would be added replacing an existing right-in/right-out entry to manage the flow of traffic into the site and improved connections to Birdcage.
- **Enhanced Pedestrian Crossings and Intersection Treatments:** Improvements to at-grade pedestrian connections to the adjacent Marketplace at Birdcage.
- **Parking Structure:** Multi-level parking structure
- **Surface Lot:** Ground level surface parking.

PEDESTRIAN AND BICYCLE NETWORK

The proposed pedestrian and bicycle circulation network is shown in Figure 9. The Specific Plan would establish a network of pedestrian bicycle routes, allowing for easy access across the site. Proposed pedestrian and bicycle improvements and typologies include:

- **Sidewalks:** Walking paths surrounding many future buildings with connections between the project and surrounding land uses and within the project.
- **Pedestrian Paseos:** Wide and flexible paths with connections between the project site and surrounding uses.

- **Green Loop Ped / Multi-Use Trail:** Protected path through the site and connecting between the project and surrounding land uses and within the project.
- **Plazas & Parks:** Public parks located throughout the site.
- **Temporary Festival Street:** Flexible space along the main street spine allowing for large, temporary street festivals and events.
- **Transit Station:** A future transit station would be strategically located along the Sunrise Boulevard. The transit station will be designed to host conventional busses as well as adaptable to meet future transit needs.
- **Enhanced Pedestrian Crossings and Intersection Treatments:** Improvements to at-grade pedestrian connections to the adjacent Marketplace at Birdcage.

OPEN SPACE NETWORK

The proposed open space network is shown in Figure 10. The Specific Plan would create a green network of parks, plazas, and streets that are safe and connected with an abundance of sustainably grown vegetation. Proposed open space features include:

- **Green Loop Pedestrian / Multi-Use Trail:** Protected path through the site connecting between the project and surrounding land uses and within the project.
- **Pedestrian Paseo / Walk Streets:** Wide flexible paths with connections between the project and surrounding land uses and within the project.
- **Citrus Steps:** Public outdoor seating at the base of the major office building.
- **Main Street:** Flexible open space for events.
- **Fountains:** Public fountain and play area within Sunrise Commons gathering place.
- **Tented Event Plaza:** Public event space along Sunrise Boulevard.
- **Creek Trail:** Public trail adjacent to creek along Sunrise Boulevard.
- **Urban "Agrihood":** Community garden along Sunrise Boulevard.
- **Community Park:** Public park connecting the site between the project and surrounding land uses and within the project.
- **Neighborhood Green:** Private parks for housing communities.
- **Medical Green:** Potential open space for medical complex.
- **Shared Green Streets:** Landscaped streets with a large tree canopy.

SUSTAINABILITY

The Specific Plan would incorporate best practices to support sustainable development, including:

- **Existing/Protected Trees**
- **New Tree Canopy**
- **Restored Creek & Native Habitat**
- **Bioswale / Run-off Collection**
- **Large Permeable Green Surfaces**
- **Solar Roof Opportunity Sites**

As part of the proposed Specific Plan, an existing on-site creek along Sunrise Boulevard (located in the southwestern corner of the Plan Area) may be restored and the associated native riparian habitat would be restored. A public trail would be provided adjacent to the restored creek.

PHASING

The proposed phasing plan is shown in Figure 11. The Specific Plan envisions the site to be built over four phases over 20 years. Projected development phasing is based on site availability, market demand and absorption, and development feasibility. The phasing plan includes:

- **Phase 1 - Ready to Go:** Initial development is anticipated to include: redevelopment of the former Sears as a dining entertainment district, retail, limited-service hotel, open space, and up to 245 DU.
- **Phase 2 - Employment Anchor:** Phase 2 development is anticipated to include redevelopment of Macy's Men & Home as creative office campus, additional retail and dining, extended stay hotel, neighborhood park, and up to 135 townhouse DU.
- **Phase 3 - Mixed-Use Main Street:** Phase 3 development is anticipated to include redevelopment of Sunrise Mall as a mixed-use main street with retail, dining, office, residential, full-service hotel, and central open space.
- **Phase 4 - Longtime Opportunities:** Potential Phase 4 development could include the redevelopment of JC Penney and Macy's Women as mixed-use district with office, retail, open space, and residential.

UTILITIES

Similar to the existing Sunrise Mall located on-site, future development allowed under the proposed Specific Plan would connect to existing city infrastructure to provide water, sewer, and storm drainage utilities. Existing storm drain, sewer, water, and gas lines/pipes are currently located on-site and along the various surrounding roadways, including but not limited to Arcadia Drive, Greenback Lane, and Sunrise Boulevard.

The Plan Area would be served by the following existing service providers:

1. Citrus Heights Water District for water;
2. Sacramento Area Sewer District for wastewater collection and treatment;
3. City of Citrus Heights for stormwater collection;
4. Pacific Gas and Electric Company and the Sacramento Municipal Utility District for gas and electricity.

Best management practices (BMPs) will be applied to future development to limit the concentrations of constituents in any site runoff to acceptable levels. Stormwater flows from the Plan Area would be directed to stormwater treatment basins, treatment planters, and bioretention areas by an improved stormwater conveyance system on-site. Stormwater runoff would not be allowed to discharge directly to the existing storm drains without first discharging to the bioretention areas. Low impact development strategies and source control measures will be incorporated to treat storm water and reduce runoff. Additionally, erosion and sediment control measures would be implemented during construction.

PROJECT OBJECTIVES

The Specific Plan has been designed to meet the following applicant project objectives:

- Create an economic engine with environments that promote economic activity and job creation, where both employers and employees want to be, by providing a mix of creative office space, food, dining, and entertainment.

- Design a dynamic Main Street and community gathering space with lots do to and see by providing an abundance of open space for event programming and a strategically located main street in the core of the Plan Area.
- Establish a pedestrian-friendly community with a network of parks, plazas, and streets that are safe and connected with shade trees and sustainable landscaping in order to promote healthy activities, such as outdoor gardens, fitness areas, and event lawns.
- Provide safe, convenient, and accessible access to high quality transit corridors with frequent headways and enhanced transit stops.
- Include streets designed for people, with a network of safe and slow speed streets that serve pedestrians and cyclists while allowing vehicular access and enhancing mobility, in order to reduce vehicle-miles-traveled (VMT) and associated greenhouse gas and criteria pollutant emissions.
- Create connected communities with various housing options and high quality of life by providing townhomes, lifestyle housing, senior housing, and mixed use residential.
- Provide for a range of housing densities and product choices affordable to a broad spectrum of income levels including housing options such as townhomes, lifestyle housing, apartments, flats, senior housing, and mixed use residential.
- Allow for phased development and infrastructure improvements to respond to market demand while requiring infrastructure and public facilities necessary to serve the project's needs.
- Transform the Sunrise Mall into a premier regional destination and a flourishing center of community life where residents and visitors shop, work, live, and play, consistent with City General Plan Policy 12.3.

GENERAL PLAN AND ZONING

The General Plan and zoning for the Plan Area are discussed in detail below.

GENERAL PLAN

The Plan Area is designated as General Commercial by the City's General Plan Land Use Map (Figure 12). The General Commercial land use designation provides for retail uses, services, restaurants, professional and administrative offices, hotels and motels, mixed-use projects, multi-family residences, public and quasi-public uses, and similar and compatible uses. The floor-area-ratio (FAR) for nonresidential uses with this designation shall not exceed 0.6. Residential densities shall not exceed 40 units per net acre.

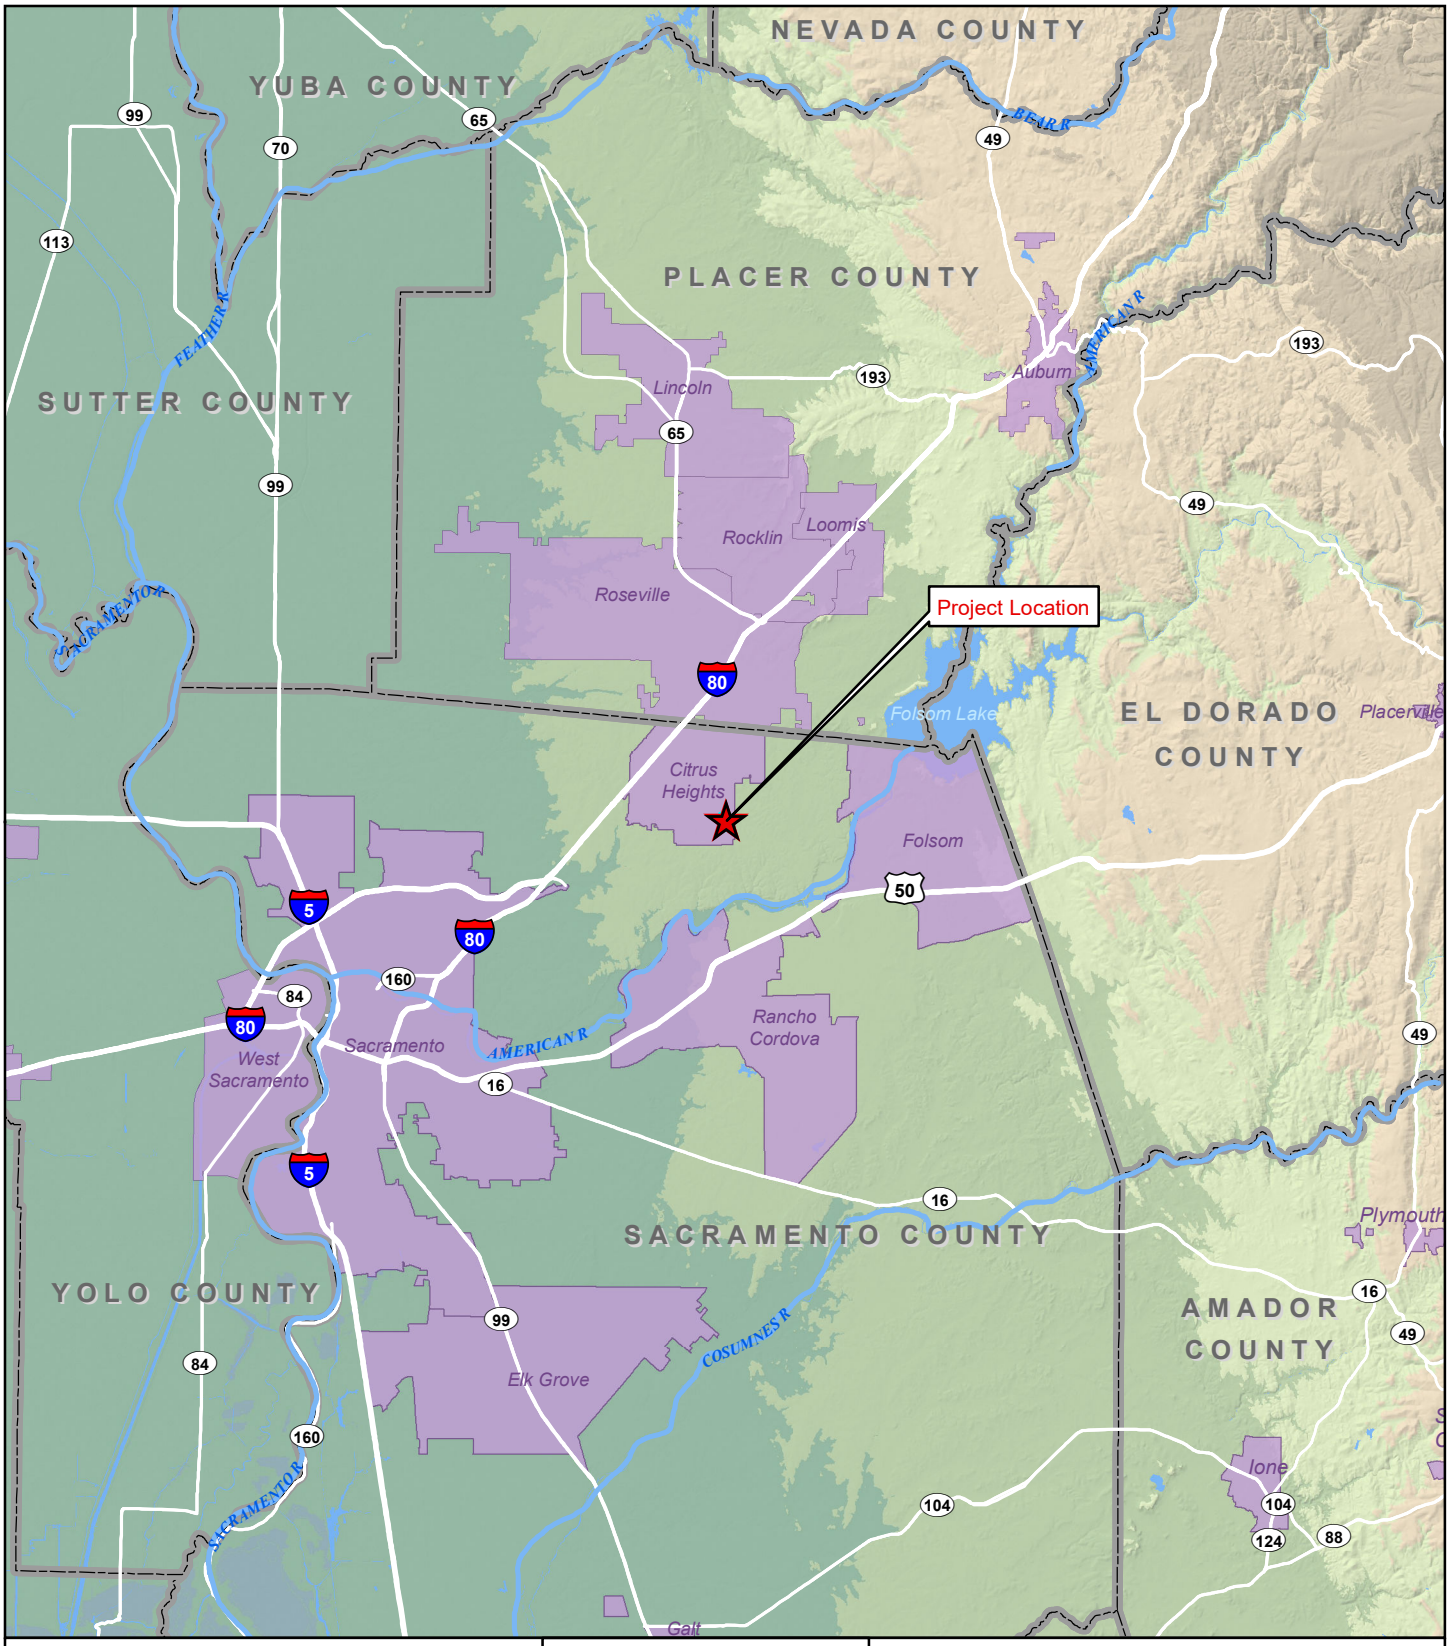
The densities and intensities proposed by the Specific Plan are not supported by the existing General Commercial land use designation. As such, the proposed Specific Plan would require the creation of a new land use category, Marketplace Mixed Use, to the General Plan. The proposed land use is shown in Figure 13.

ZONING

The Plan Area is zoned as Shopping Center (Figure 14) by the City. The Shopping Center zoning district is applied to areas appropriate for a wide range of retail and service land uses, promoting the unified grouping of these uses with convenient off-street parking and loading. Residential uses may also be accommodated as part of mixed-use projects. Projects within this zone are intended to be designed to be an integral part of the surrounding neighborhood, and the larger community. The Shopping Center zoning district is consistent with the General Commercial land use designation of the General Plan. The Shopping Center district allows for 40 units per net acre.

The proposed Specific Plan would require a rezone of the entire Plan Area to the City's Special Planning Area district. Chapter 106.50 of the City of Citrus Heights Municipal Code outlines the development standards for the Special Planning Area district. The purpose of this zoning district is to allow consideration of innovation in site planning and other aspects of project design, and more effective design responses to site features, uses on adjoining properties, and environmental impacts than the Zoning Code standards would produce without adjustment. The proposed zoning is shown in Figure 15.

REQUESTED ENTITLEMENTS AND OTHER APPROVALS



The City of Citrus Heights is the Lead Agency for the proposed project, pursuant to the State Guidelines for Implementation of CEQA, Section 15050.

This document will be used by the City of Citrus Heights to take the following actions:

- Approval of the Specific Plan;
- Approval of the General Plan Amendment to change the land use designation of the entire Plan Area from General Commercial to Marketplace Mixed Use;
- Approval of the rezone of the entire Plan Area from Shopping Center to Special Planning Area;
- Future building, grading, and other permits as necessary for future construction;
- Certification of the EIR;
- Adoption of the Mitigation Monitoring and Reporting Program (MMRP);

The following agencies may be required to issue permits or approve certain aspects of the proposed project:

- Regional Water Quality Control Board (RWQCB) – Construction activities would be required to be covered under the National Pollution Discharge Elimination System (NPDES);
- RWQCB – A Storm Water Pollution Prevention Plan (SWPPP) would be required to be approved prior to construction activities pursuant to the Clean Water Act;
- California Department of Fish and Wildlife (CDFW) – Section 1600 permit for creek restoration;
- U.S. Army Corps of Engineers (USACE) – Section 404 permit for creek restoration;
- Sacramento Metropolitan Air Quality Management District (SMAQMD) – Construction activities would be subject to the SMAQMD rules and regulations;
- Citrus Heights Water District – Approval of infrastructure details for water supply facilities; and
- Sacramento Area Sanitation District – Approval of infrastructure details for wastewater collection facilities.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

X	Aesthetics		Agriculture/Forestry Resources	X	Air Quality
	Biological Resources	X	Cultural Resources	X	Energy
X	Geology/Soils	X	Greenhouse Gases	X	Hazards and Hazardous Materials
X	Hydrology/Water Quality	X	Land Use/Planning		Mineral Resources
X	Noise	X	Population/Housing	X	Public Services
X	Recreation	X	Transportation	X	Tribal Cultural Resources
X	Utilities/Service Systems		Wildfire	X	Mandatory Findings of Significance

DETERMINATION

On the basis of this initial evaluation:

	I find that the proposed Specific Plan COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
	I find that although the proposed Specific Plan could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
X	I find that the proposed Specific Plan MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
	I find that the proposed Specific Plan MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
	I find that although the proposed Specific Plan could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed Specific Plan, nothing further is required.

Casey Kempenaar — August 7, 2020

Signature — Date

EVALUATION INSTRUCTIONS

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).
5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a) Earlier Analysis Used. Identify and state where they are available for review.
    b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9) The explanation of each issue should identify:
    a) The significance criteria or threshold, if any, used to evaluate each question; and
    b) The mitigation measure identified, if any, to reduce the impact to less than significant.

EVALUATION OF ENVIRONMENTAL IMPACTS

In each area of potential impact listed in this section, there are one or more questions which assess the degree of potential environmental effect. A response is provided to each question using one of the four impact evaluation criteria described below. A discussion of the response is also included.

- Potentially Significant Impact. This response is appropriate when there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries, upon completion of the Initial Study, an EIR is required.
- Less than Significant With Mitigation Incorporated. This response applies when the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact". The Lead Agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level.
- Less than Significant Impact. A less than significant impact is one which is deemed to have little or no adverse effect on the environment. Mitigation measures are, therefore, not necessary, although they may be recommended to further reduce a minor impact.
- No Impact. These issues were either identified as having no impact on the environment, or they are not relevant to the project.

ENVIRONMENTAL CHECKLIST

This section of the Initial Study incorporates the most current Appendix "G" Environmental Checklist Form contained in the CEQA Guidelines. Impact questions and responses are included in both tabular and narrative formats for each of the 21 environmental topic areas.

I. AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Have a substantial adverse effect on a scenic vista?	X			
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X	
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with the applicable zoning and other regulations governing scenic quality?	X			
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	X			

Responses to Checklist Questions

Responses a, c, d) It has been determined that the potential impacts on aesthetics caused by the proposed Specific Plan will require a detailed analysis in the EIR. Consequently, the lead agency will examine all of the environmental issues listed in the checklist above (a, c, and d) in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on aesthetics. At this point, a definitive impact conclusion for each of these environmental topics will not be made. Rather, all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include a visual analysis that presents the methodology, thresholds of significance, a consistency analysis, a cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce any potential impacts on aesthetics. The analysis will look at foreground, middleground, and background views from public vantage points along the perimeter of the Plan Area. The analysis will include an evaluation of the building materials for reflective values/glare and an evaluation of the lighting and the potential for light pollution offsite. The EIR will also compare the proposed Specific Plan to applicable zoning and other regulations related to scenic qualities.

Response b): The Plan Area is not located adjacent to or in the vicinity of a state scenic highway. The project would have no impact related to the potential to substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, within a

state scenic highway. Therefore, this impact would be ***less than significant***. This issue will not be addressed further.

II. AGRICULTURE AND FORESTRY RESOURCES

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1222(g)) or timberland (as defined in Public Resources Code section 4526)?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

Responses to Checklist Questions

Response a): The Plan Area and surrounding are designated as Urban and Built-Up Land as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. Therefore, implementation of the proposed Specific Plan would have a ***no impact*** relative to Important Farmland.

Response b): The Plan Area is not zoned for agricultural use nor is it under a Williamson Act contract. The proposed Specific Plan would not conflict with existing zoning for agricultural use, or a Williamson Act contract. Implementation of the proposed Specific Plan would have ***no impact*** relative Williamson Act contracts.

Responses c), d): There are no forest resources or zoning for forest lands located on the Plan Area. This CEQA topic is not relevant to the proposed Specific Plan and does not require further analysis. Therefore, there would be ***no impact*** regarding the loss of forest or timber resources.

Response e): The Plan Area is currently developed with commercial uses. The lands adjacent to the site contain commercial, business professional, and residential uses. The area surrounding the site is designated as Urban and Built-Up Land as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program. There are no existing agricultural operations in the vicinity of the site.

The proposed Specific Plan does not involve changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use, or conversion of forest land to non-forest use. Implementation of the proposed Specific Plan would have a ***no impact*** relative to this issue.

III. AIR QUALITY

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Conflict with or obstruct implementation of the applicable air quality plan?	X			
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	X			
c) Expose sensitive receptors to substantial pollutant concentrations?	X			
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	X			

Existing Setting

The Plan Area is located within the Sacramento Valley Air Basin (SVAB). The SVAB encompasses eleven counties including all of Shasta, Tehama, Glenn, Colusa, Butte, Sutter, Yuba, Sacramento, and Yolo Counties, the westernmost portion of Placer County and the northeastern half of Solano County. The SVAB is the northern half of California's Great Valley and is bordered on three sides (west, north, and east) by mountain ranges, with peaks in the eastern range above 9,000 feet. The SVAB is bounded by the North Coast Ranges on the west and Northern Sierra Nevada Mountains on the east. The SVAB is approximately 13,700 square miles and essentially a smooth valley floor with elevations ranging from 40 to 500 feet. The rolling valley is interrupted by the Sutter Buttes, an area of 80 square miles in northern Sutter County, which rise abruptly to more than 2,100 feet above the valley floor.

At the county level, air quality is managed through land use and development planning practices that are implemented by Sacramento County and the incorporated Cities and through permitted source controls that are implemented by SMAQMD.

The SMAQMD is responsible for (1) implementing air quality regulations, including developing plans and control measures for stationary sources of air pollution to meet the NAAQS and CAAQS, (2) implementing permit programs for the construction, modification, and operation of sources of air pollution, and (3) enforcing air pollution statutes and regulations governing stationary sources. With California Air Resources Board (CARB) oversight, the SMAQMD administers local regulations.

Responses to Checklist Questions

Responses a-d): Based on the current air quality conditions in the SVAB, as well as the maximum development potential of the Plan Area, it has been determined that the potential impacts on air quality caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of the environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on air quality. At this point, a definitive impact conclusion for each of these environmental topics will not be made. Rather, all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include an air quality analysis that presents the methodology, thresholds of significance, an impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts on air quality. The air quality analysis will address air quality impacts, including the potential for the project to:

- conflict with or obstruct implementation of the applicable air quality plan;
- violate any air quality standard or contribute substantially to an existing or projected air quality violation;
- result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);
- expose sensitive receptors to substantial pollutant concentrations; and/or
- create objectionable odors affecting a substantial number of people.

IV. BIOLOGICAL RESOURCES

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X	
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?				X
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			X	

Responses to Checklist Questions

Response a): The approximately 95.8-acre Plan Area is currently developed with the Sunrise Mall and associated parking areas (see Figure 3). The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan also includes a circulation and open space network to support the future land uses.

Because the Plan Area is currently developed and used as a shopping mall, there is no potential for presence of special-status plant species. The Plan Area contains limited habitat for special-status bird and bat species. The structures in the Plan Area include the large, central mall building, and six small- to medium-sized, detached retail buildings scattered around the parking lot areas. The buildings are about 50 years old and could provide limited habitat for some special-status bat species. Additionally, the on-site trees scattered throughout the Plan Area may provide limited habitat for bird species. These are discussed further below.

Special-Status Bird Species

There are many trees located in the parking lots, along the surrounding and internal roadways, and near the existing mall buildings in the Plan Area. Future development of the Plan Area would result in the removal or alteration of many of these existing trees. These trees are generally not suitable for raptor nesting and there is no suitable foraging habitat on-site or in the surrounding developed areas. There are a variety of urban dwelling birds that would be anticipated to be present, and these birds may nest in on-site ornamental trees. Foraging habitat is not present for special-status bird species known throughout the region, and none were observed during the site visit completed by De Novo Planning Group in July 2020. Mitigation Measure 4.6-2c of the City's General Plan EIR requires any development projects within 300 feet of potential raptor nesting habitat that would be constructed during the nesting season to conduct preconstruction surveys to identify active nests for tree-nesting raptors. This General Plan EIR mitigation measure requires the surveys to be completed no more than two weeks before the start of construction by a qualified biologist.

Special-Status Bat Species

Bats are a highly mobile species found in a variety of habitats in the region, including buildings, bridges, mines, caves, tree cavities, under bark or rocks, etc. Bats can establish roosts in new places in any given year, including in the buildings or landscaping trees in the Plan Area. As a standard practice, the City requires preconstruction surveys of areas to be disturbed, including demolition of buildings, to ensure that there are no adverse impacts to species known through the region. It is noted that there are no records of bat infestations in the existing buildings, and there are no signs of bats observed during the site visit completed by De Novo Planning Group in July 2020. Mitigation Measure 4.6-2d of the City's General Plan EIR requires any development projects that would affect pallid bat species to implement avoidance measures.

Conclusion

Special-status bird and bat species would not be adversely affected by the proposed Specific Plan. The City will require standard preconstruction surveys prior to demolition or other disturbance activities as a standard precaution. Therefore, the proposed Specific Plan would have a ***less than significant*** impact relative to this topic.

Response b): There is no riparian habitat or sensitive natural communities found on the Plan Area. The Plan Area is currently developed with urban uses. It is noted that, as part of the proposed Specific Plan, an existing on-site, underground pipe contains flows from an upstream creek. The pipe is located along Sunrise Boulevard (located in the southwestern corner of the Plan Area). The Specific Plan may include the restoration activities that would remove the pipe and daylight the creek to a native riparian habitat. The daylighting of the flows and creation of riparian habitat would be considered a beneficial impact. Implementation of the proposed Specific Plan would have ***no impact*** on riparian habitats or natural communities.

Response c): As noted above, the Plan Area contains a small segment of an underground creek in the southwestern corner of the Plan Area. The creek was previously undergrounded as part of the original Sunrise Mall development. As part of the creek restoration and habitat creation proposed by the Specific Plan, permitting associated with the federal and state Clean Water Acts may be required. Specifically, a 1600 permit from the CDFW and a Section 404 permit from the USACE may be required, although it will be determined by the regulatory agencies at the time that a detailed plan is available.

BMPs will be applied to future development to limit the concentrations of constituents in any site runoff to acceptable levels. Low impact development strategies and source control measures will be incorporated to treat storm water and reduce runoff. Additionally, erosion and sediment control measures would be implemented during construction consistent with the city's construction specifications

The potential restoration of this creek and the associated former riparian habitat would be considered a beneficial impact. With regulatory permit compliance, implementation of the proposed Specific Plan would have ***less than significant*** impact relative to this topic.

Response d): The CNDDB does not contain any documented wildlife corridors or wildlife nursery sites on or adjacent to the Plan Area. The Plan Area and surrounding area are built out with urban uses, including industrial, residential, and commercial uses. Therefore, the project would have a ***less than significant*** impact to wildlife corridors or wildlife nursery sites.

Response e): No habitat conservation plans or natural community conservation plans apply to the proposed Specific Plan. Therefore, the proposed Specific Plan would have a ***less than significant*** impact relative to this topic.

Responses f): There are many trees located in the parking lots, along the surrounding and internal roadways, and near the existing mall buildings in the Plan Area. Future development of the Plan Area would result in the removal or alteration of many of these existing trees. Future buildout of the Plan Area would be required to comply with the City's Tree Preservation and Protection Ordinance. Chapter 106.39 of the Citrus Heights Zoning Code provides regulations for the protection, preservation, and maintenance of protected trees in the City. The ordinance protects native oak trees, oak woodlands, trees of historic or cultural significance, groves and stands of mature trees, and mature trees associated with development proposals.

According to Section 106.39.020(A) of the Code, the provisions of Chapter 106.39 shall apply in all zoning districts to the removal or relocation of any protected tree, and to any encroachment (for example, grading) within the protected zone of a protected tree. A protected tree is any of the following:

1. A native oak tree with a diameter of six or more inches as measured 54 inches above the ground, or a multi-trunked oak tree having an aggregate diameter of 10 inches or more measured 54 inches above ground;
2. A heritage, or landmark tree or grove identified by Council resolution;
3. Significant groves or stands of trees identified by Council resolution;
4. A mature tree other than those listed in Subsections A.1 through A.3, that is 19 inches or more in diameter as measured at 54 inches above the ground, and located on a commercial parcel, or on a residential parcel that can be further subdivided, or on a parcel in the RD-1, RD-2, or RD-3 zones, provided that the tree is not a willow (*Salix* spp.*)*, fruit tree, eucalyptus (*Eucalyptus* spp.), alder (*Alnus* spp.), cottonwood (*Populus* spp.), pine (*Pinus* spp.), catalpa (*Catalpa* spp.), fruitless mulberry (*Morus* spp.), or palm (*Acoelorrphe* spp.);
5. A tree required to be planted, relocated, or preserved by a requirement of this Zoning Code, or by a condition of approval of a Tree Permit or other discretionary permit, and/or as environmental mitigation for a discretionary permit; and
6. A tree within 25 feet of a seasonal stream that is 19 inches or more in diameter as measured at 54 inches above the ground.

According to Section 106.39.020(B) of the Code, a Tree Permit shall be required prior to:

a. The relocation, removal, cutting-down, or other act that causes the destruction of a protected tree;
b. Any grading, paving, or other ground-disturbing activity within the protected zone of a protected tree or anything that would change the soil moisture content in the protected zone; and
c. Any pruning of a protected tree.

According to Section 106.39.020(B) of the Code, a Tree Permit shall not be issued for tree removal in a nonresidential zoning district, except in conjunction with:

a. The approval of a discretionary project for the same site;
b. The approval of a Building Permit for the same site; or
c. The approval of improvement plans for a subdivision of the same property.

Section 106.39.060 of the Code outlines the tree planting and replacement requirements. Trees that cannot remain in the final design must be replaced in accordance with Section 106.39.060 of the Code. It is not known at this time if, or how many, trees would require removal. The current conceptual plans for the Plan Area; however, show extensive trees to be planted and it is anticipated that the Plan Area will be move vegetated when compared to the current condition of the site. Nevertheless, the project would be required to comply with the requirements of Chapter 106.39 of the Citrus Heights Zoning Code. The proposed Specific Plan would have a ***less than significant*** impact relative to this topic.

V. CULTURAL RESOURCES

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Cause a substantial adverse change in the significance of a historical resource pursuant to '15064.5?	X			
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to '15064.5?	X			
c) Disturb any human remains, including those interred outside of formal cemeteries?	X			

Responses to Checklist Questions

Responses a-c): Based on known historical and archaeological resources in the region, and the potential for undocumented underground cultural resources in the region, it has been determined that the potential impacts on cultural resources caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of the environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on cultural resources. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include an overview of the prehistory and history of the area, the potential for surface and subsurface cultural resources to be found in the area, the types of cultural resources that may be expected to be found, a review of existing regulations and policies that protect cultural resources, an impact analysis, and mitigation that should be implemented in order to reduce potential impacts to cultural resources. In addition, the CEQA process will include a request to the Native American Heritage Commission for a list of local Native American groups that should be contacted relative to this project. The CEQA process will also include consultation with any Native American groups that have requested consultation with the City of Citrus Heights.

VI. ENERGY

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	X			
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	X			

Responses to Checklist Questions

Responses a-b): Appendix F of the State CEQA Guidelines requires consideration of the potentially significant energy implications of a project. CEQA requires mitigation measures to reduce "wasteful, inefficient and unnecessary" energy usage (Public Resources Code Section 21100, subdivision [b][3]). According to Appendix F of the CEQA Guidelines, the means to achieve the goal of conserving energy include decreasing overall energy consumption, decreasing reliance on natural gas and oil, and increasing reliance on renewable energy sources. In particular, the proposed Specific Plan would be considered "wasteful, inefficient, and unnecessary" if it were to violate state and federal energy standards and/or result in significant adverse impacts related to project energy requirements, energy inefficiencies, energy intensiveness of materials, cause significant impacts on local and regional energy supplies or generate requirements for additional capacity, fail to comply with existing energy standards, otherwise result in significant adverse impacts on energy resources, or conflict or create an inconsistency with applicable plan, policy, or regulation.

The amount of energy used at the Plan Area would directly correlate to the size of the future buildings, the energy consumption of associated technology, machinery, and appliances, and outdoor lighting. Other major sources of energy consumption associated with future buildout of the Plan Area include fuel used by vehicle trips generated during project construction and operation, and fuel used by off-road construction vehicles during construction.

Due to the size of the proposed Plan Area and the maximum development potential allowed by the land use map, the potential impacts on energy caused by the proposed Specific Plan will require a detailed analysis in the EIR. Consequently, the lead agency will examine each of the environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on energy resources. The EIR will include a discussion and analysis that provides calculated levels of energy use expected for the proposed Specific Plan, based on commonly used modelling software (i.e. CalEEMod v.2016.3.2 and the CARB's EMFAC2014). At this point, a definitive impact conclusion for each of these environmental topics will not be made. Rather, all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

VII. GEOLOGY AND SOILS

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation***	***Less Than Significant Impact***	***No Impact***
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	X			
ii) Strong seismic ground shaking?	X			
iii) Seismic-related ground failure, including liquefaction?	X			
iv) Landslides?	X			
b) Result in substantial soil erosion or the loss of topsoil?	X			
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	X			
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	X			
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				X
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	X			

Responses to Checklist Questions

Responses a.i-a.iv, b, c, d, f): It has been determined that the potential impacts from geology and soils will require a detailed analysis in the EIR. As such, the lead agency will examine each of the potentially significant environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact from geology and soils. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include a review of existing geotechnical reports, published documents, aerial photos, geologic maps, and other geological and geotechnical literature pertaining to the site and surrounding area to aid in evaluating geologic resources and geologic hazards that may be present. The EIR will include a description of the applicable regulatory setting, a description of the existing geologic and soils conditions on and around the Plan Area, an evaluation of geologic hazards, a description of the nature and general engineering characteristics of the subsurface conditions within the Plan Area, and the provision of findings and potential mitigation strategies to address any geotechnical concerns or potential hazards.

This section will provide an analysis including thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts associated with geology and soils.

Response e): The proposed Specific Plan would connect to the municipal sewer system for wastewater disposal. Septic tanks or septic systems are not proposed as part of the project. As such, this CEQA topic is not relevant to the proposed Specific Plan and does not require further analysis. Therefore, there would be ***no impact*** regarding septic tanks or alternative waste water disposal systems.

VIII. GREENHOUSE GAS EMISSIONS

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	X			
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	X			

Responses to Checklist Questions

Responses a), b): Implementation of the proposed Specific Plan could generate greenhouse gases (GHGs) from a variety of sources, including but not limited to vehicle trips, vehicle idling, electricity consumption, water use, and solid waste generation. It has been determined that the potential impacts from GHG emissions by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of the environmental issues listed in the checklist above in the EIR and will determine whether the proposed Specific Plan has the potential to have a significant impact from GHG emissions. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

IX. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	X			
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	X			
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	X			
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	X			
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	X			
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				X

Responses to Checklist Questions

Responses a-d, f): It has been determined that the potential impacts on hazards and hazardous materials caused by the proposed Specific Plan will require a detailed analysis in the EIR. Consequently, the lead agency will examine each of the potentially significant environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on hazards and hazardous materials. At this point, a definitive impact conclusion for each of these environmental topics will not be made. Rather, all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include a hazards and hazardous materials analysis that presents the methodology, thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts on hazards and hazardous materials. The hazards and hazardous materials analysis will include the following:

- A description of the applicable hazards-related federal, state, and local statutes, regulations, and programs that the proposed Specific Plan would be required to comply with (during project construction and operation).
- An assessment of the existing Recognized Environmental Conditions (RECs) identified for the Plan Area.
- A summary of the past uses of the Plan Area.
- A determination of whether the Plan Area is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.
- The potential for soil contamination or unknown underground facilities (i.e., underground wells, septic systems, etc.) in the Plan Area.
- An analysis of the uses that are proposed on the Plan Area, and what hazardous materials could be used by the proposed Specific Plan.
- An analysis regarding conflicts with an adopted emergency response plan or emergency evacuation plan.
- A discussion of the potential impacts on schools within ¼-mile from the Plan Area.

Response e): The project is not located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. The closest airport is the Sacramento McClellan Airport, located approximately 6.8 miles west of the Plan Area. The Plan Area is not within any of the Sacramento McClellan Airport safety zones, nor is it within any area identified as impacted by the Sacramento McClellan Airport in the McClellan Air Force Base Comprehensive Land Use Plan (i.e. it is not within the Airport Influence Area). Therefore, impacts associated with private airstrips and airport land use plans would be ***less than significant***. This topic does not warrant additional analysis and will not be addressed further in the EIR.

Response g): The risk of wildfire is related to a variety of parameters, including fuel loading (vegetation), fire weather (winds, temperatures, humidity levels and fuel moisture contents) and topography (degree of slope). Steep slopes contribute to fire hazard by intensifying the effects of wind and making fire suppression difficult. Fuels such as grass are highly flammable because they have a high surface area to mass ratio and require less heat to reach the ignition point.

The California Department of Forestry and Fire Protection (Cal Fire) has designated the entire City of Citrus Heights as a Local Responsibility Area (LRA). The Plan Area is not within an area classified as a Very High Fire Hazard Severity Zone (VHFHSZ). Additionally, the proposed Specific Plan is not located within a State Responsibility Area (SRA).

The proposed Specific Plan would include future development of residential, retail, mixed use, office, community/institutional, hotel, and parking uses. The Plan Area is located in an area that is substantially built out with urban uses, including mainly commercial and residential, which are not considered at a significant risk of wildlife. There are no steep slopes on or near the Plan Area. Development of the project would not exacerbate fire risks. Therefore, impacts from project implementation would be considered ***less than significant*** relative to exposure of people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. This topic does not warrant additional analysis and will not be addressed further in the EIR.

X. HYDROLOGY AND WATER QUALITY

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	X			
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	X			
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
(i) result in substantial erosion or siltation on- or off-site;	X			
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	X			
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems to provide substantial additional sources of polluted runoff; or	X			
(iv) impede or redirect flood flows?	X			
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	X			

Responses to Checklist Questions

Responses a-c, e): Flood hazards can result from intense rain, snowmelt, cloudbursts, or a combination of all three, or from failure of a water impoundment structure, such as a dam. Human activities have an effect on water quality when chemicals, heavy metals, hydrocarbons (auto emissions and car crank case oil), and other materials are transported with storm water into drainage systems. Construction activities can increase sediment runoff, including concrete waste and other pollutants. Additionally, as noted previously, the Plan Area contains a small segment of an underground creek in the southwestern corner of the Plan Area. The creek was previously undergrounded as part of the original Sunrise Mall development. As part of the proposed Specific Plan, the creek may be restored and habitat may be created.

It has been determined that the potential impacts on hydrology and water quality caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of the potentially significant environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant

impact on hydrology and water quality. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

This section of the EIR will provide an analysis including the methodology, thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce any potential impacts associated with hydrology and water quality.

The EIR will present the existing Federal Emergency Management Agency (FEMA) flood zones and risk of flooding in the Plan Area and general vicinity. This section will describe the surface drainage patterns of the Plan Area and adjoining areas. The EIR will also evaluate the potential construction and operational impacts of the proposed Specific Plan on water quality, including surface water and groundwater. The potential for substantial erosion on-site will be analyzed. The potential for the proposed Specific Plan to substantially decrease groundwater supplies or interfere with groundwater recharge will also be analyzed. This section will also identify 303(D)-listed impaired water bodies in the vicinity of the Plan Area. Conformity of the proposed Specific Plan to water quality regulations will also be discussed. Mitigation measures will be developed to incorporate Best Management Practices (BMPs), and any other applicable local, state, and federal requirements to reduce the potential for site runoff.

Response d): The Plan Area is not located in a flood zone or dam inundation area. The Plan Area is located approximately 69 miles northeast of the Pacific Ocean and, as such, is not subject to a tsunami or seiche. Therefore, impacts from project implementation would be considered ***less than significant*** relative to flood hazard, tsunami, or seiche zones. This topic does not warrant additional analysis and will not be addressed further in the EIR.

XI. LAND USE AND PLANNING

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Physically divide an established community?	X			
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	X			

Responses to Checklist Questions

Responses a-b): It has been determined that the potential impacts on land use and planning caused by the proposed Specific Plan will require a detailed analysis in the EIR. Consequently, the lead agency will examine each of the two environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on land use and planning. At this point, a definitive impact conclusion for each of these environmental topics will not be made. Rather, all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include a detailed discussion of the project entitlements, including approval of the Specific Plan, General Plan Amendment, rezone, and future building, grading, and other permits required for future construction, as it relates to the existing General Plan, Zoning Code, and other local regulations. The local, regional, state, and federal jurisdictions potentially affected by the Specific Plan will be identified, as well as their respective plans, policies, laws, and regulations, and potentially sensitive land uses. The proposed Specific Plan will be evaluated for consistency the City of Citrus Heights General Plan, the Zoning Ordinance, and other local planning documents. Planned development and land use trends in the region will be identified based on currently available plans. Reasonably foreseeable future development projects within the region will be noted, and the potential land use impacts associated with the project will be presented.

This section will provide an analysis including the thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to ensure consistency with the existing and planned land uses.

XII. MINERAL RESOURCES

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

Responses to Checklist Questions

Response a-b): As described in the Citrus Heights General Plan EIR, the majority of the City's planning area is designated as MRZ-1, where no significant mineral deposits are present. A small portion of the planning area is defined as MRZ-3, which has unknown mineral resources. However, because the planning area is an urbanized area and because the Draft General Plan does not propose to change existing planned land uses, extraction of any potential mineral resources is unlikely. The City's General Plan EIR found that no impact related to mineral resources would occur.

The Plan Area is currently developed with the Sunrise Mall and is located within an area designated as MRZ-1. The MRZ-1 designation applies to areas where adequate information indicates that no significant mineral deposits are present, or where there is little likelihood for their presence. There are no substantial aggregate materials located within the Plan Area. Therefore, the Specific Plan would not result in the loss of availability of a known mineral resource or locally-important mineral resources recovery site. Therefore, there is ***no impact*** related to mineral resources.

XIII. NOISE

Would the project result in:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Generation of a temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	X			
b) Generation of excessive groundborne vibration or groundborne noise levels?	X			
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

Responses to Checklist Questions

Responses a-b): Based on existing and projected noise levels along roadways, and the potential for noise generated during project construction and operational activities, it has been determined that the potential impacts from noise caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of the two potentially significant environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact from noise. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather both are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will identify sensitive receptors, land use compatibility, noise impacts, and attenuation of noise related impacts. The noise study will also include an assessment of construction noise and vibration impacts. The noise analysis will identify the noise level standards contained in the City of Citrus Heights General Plan Community Health Element and Municipal Code, as well as any germane state, and federal standards. Continuous (24-hour) and short-term noise measurements will be performed in the Plan Area and in the project vicinity in order to quantify existing ambient noise levels from existing community noise sources.

The EIR will provide an estimate of existing traffic noise levels adjacent to the Plan Area roadways through application of accepted traffic noise prediction methodologies. Noise sources from the project will be quantified through noise level measurements. Future on-site mobile and stationary noise sources will be evaluated. The EIR will include thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce any potential impacts associated with noise.

Response c): The project is not located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. The closest airport is the Sacramento McClellan Airport, located approximately 6.8 miles west of the Plan Area. As such, there is ***no impact*** related to this topic and it will not be addressed further in the EIR.

XIV. POPULATION AND HOUSING

Would the project:	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	X			
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			X	

Responses to Checklist Questions

Response a): It has been determined that the potential for the project to result in substantial unplanned growth will require a detailed analysis in the EIR. As such, the lead agency will examine this environmental issue in the EIR and will determine whether the proposed project has the potential to have a significant impact. At this point a definitive impact conclusion for this environmental topic will not be made, rather this topic is considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include a detailed discussion of the project characteristics as they relate to the existing General Plan Housing Element, and other local regulations. The local, regional, state, and federal jurisdictions potentially affected by the project will be identified, as well as their respective plans, policies, laws, and regulations, and potentially sensitive land uses. The proposed project will be evaluated for consistency the City of Citrus Heights General Plan, the Zoning Ordinance, and other local planning documents. Planned development and housing and population trends in the region will be identified based on currently available plans. The EIR will provide an analysis of the project's potential to induce substantial population growth including the thresholds of significance, an impact analysis, and, if necessary, feasible mitigation measures that should be implemented.

Response b): The Plan Area is currently developed with a shopping mall and smaller retail buildings and does not contain housing. The proposed Specific Plan would not displace housing or people. Implementation of the proposed Specific Plan would have ***no impact*** relative to this topic. This topic does not warrant additional analysis and will not be addressed further in the EIR.

XV. PUBLIC SERVICES

	Potentially Significant Impact	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	X			
Police protection?	X			
Schools?	X			
Parks?	X			
Other public facilities?	X			

Responses to Checklist Questions

Responses a)i-a)v: Implementation of the proposed Specific Plan would also result in increased demand for police protection, fire protection, schools, parks, and other public facilities in the area. It has been determined that the potential impacts from increased demands on schools, police protection, fire protection, parks, and other public facilities caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine each of these potentially significant environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on police protection, fire protection, schools, parks, and other public facilities. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

During the preparation of the EIR, the public service providers will be consulted in order to determine existing service levels in the project area. This would include documentation regarding existing staff levels and response times, equipment and facilities, current service capacity, existing service boundaries, and planned service expansions. Master plans from such public service providers and City policies, programs, and standards associated with the provision of public services will be described in the EIR.

The EIR will provide an analysis including the thresholds of significance and associated impact discussions, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts associated with police protection, fire protection, schools, parks, and other public facilities.

XVI. RECREATION

	Potentially Significant Impact	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	X			
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	X			

Responses to Checklist Questions

Responses a-b): Implementation of the proposed Specific Plan would result in increased demand for parks and other recreational facilities in the area. It has been determined that the potential impacts from increased demands to recreation facilities caused by the proposed project will require a detailed analysis in the EIR. As such, the lead agency will examine each of these environmental issues listed in the checklist above in the EIR, and will determine whether the proposed project has the potential to have a significant impact on recreational facilities. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

During the preparation of the EIR, the recreational facilities and services will be analyzed to determine existing service levels in the Plan Area. This would include documentation regarding existing and future facility needs, current service capacity, and planned service expansions. City policies, programs, and standards associated with the provision of recreational facilities will be presented in the EIR.

The EIR will identify thresholds of significance, provide an impact analysis, and discuss of feasible mitigation measures that should be implemented reduce impacts associated with recreation.

XVII. TRANSPORTATION

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	X			
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	X			
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	X			
d) Result in inadequate emergency access?	X			

Responses to Checklist Questions

Responses a-d): The proposed Specific Plan includes the development of uses that will increase traffic on existing and planned roadways. Based on existing and projected traffic volume levels along roadways, it has been determined that traffic impacts will require a detailed analysis in the EIR. As such, the lead agency will examine each of the environmental issues listed in the checklist above in the EIR and will determine whether the proposed Specific Plan has the potential to have a significant impact from traffic. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is conducted in the EIR.

The EIR will include a Traffic Impact Analysis (TIA) to address the impacts of the proposed Specific Plan on the surrounding transportation system including the roadways, transit service, pedestrian facilities, and bicycle facilities. The TIA will be conducted to address compliance with the City's General Plan and other requirements under CEQA. It will be prepared following applicable guidelines of the City of Citrus Heights, Sacramento County, and Caltrans, as applicable. The EIR will analyze total passenger vehicle and heavy-duty truck trips and associated vehicle-miles-traveled (VMT) that are modeled to be generated by the proposed Specific Plan. Potential impacts associated with site access, on-site circulation, and consistency with CEQA Guidelines section 15064.3, subdivision (b) will also be addressed in the EIR. Significant impacts will be identified in accordance with the established criteria, and mitigation measures will be identified to lessen the significance of any potential impacts.

The EIR will provide an analysis including the thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts associated with transportation.

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	X			
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resources to a California Native American tribe.	X			

Responses to Checklist Questions

Responses a-b): Based on known historical, cultural, tribal, and archaeological resources in the region, and the potential for undocumented underground cultural resources in the region, it has been determined that the potential impacts on tribal cultural resources caused by the proposed Specific Plan will require a detailed analysis in the EIR. As such, the lead agency will examine the environmental issues listed in the checklist above in the EIR and will decide whether the proposed Specific Plan has the potential to have a significant impact on tribal cultural resources. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will include an overview of the prehistory and history of the area, the potential for surface and subsurface tribal cultural resources to be found in the area, the types of tribal cultural resources that may be expected to be found, a review of existing regulations and policies that protect tribal cultural resources, an impact analysis, and mitigation that should be implemented in order to reduce potential impacts to tribal cultural resources. In addition, the CEQA process will include a request to the Native American Heritage Commission for a list of local Native American groups that should be contacted relative to this project, as per the requirements of AB 52. The CEQA process will also include consultation with any Native American groups that have requested consultation with the City of Citrus Heights.

XIX. UTILITIES AND SERVICE SYSTEMS

Would the project:	***Potentially Significant Impact***	***Less Than Significant with Mitigation Incorporation***	***Less Than Significant Impact***	***No Impact***
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	X			
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	X			
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the projects projected demand in addition to the providers existing commitments?	X			
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reductions goals?	X			
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	X			

Responses to Checklist Questions

Responses a-e): Implementation of the proposed Specific Plan would result in increased demands for utilities to serve the project. As such, the EIR will examine each of the environmental issues listed in the checklist above and will decide whether the proposed Specific Plan has the potential to have a significant impact to utilities and service systems. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

The EIR will analyze wastewater, water, and storm drainage infrastructure, as well as other utilities (i.e. solid waste, gas, electric, etc.), that are needed to serve the proposed Specific Plan. The wastewater assessment will include a discussion of the proposed collection and conveyance system, treatment methods and capacity at the treatment plants, disposal location(s) and methods, and the potential for recycled water use for irrigation in the future. The EIR will analyze the impacts associated with future on-site construction of the conveyance system, including temporary impacts associated with the construction phase. The proposed infrastructure will be presented. The EIR will provide a discussion of the wastewater treatment plants that are within proximity to the Plan Area, including current demand and capacity at these plants. The analysis will discuss the disposal methods and location, including environmental impacts and permit requirements associated with disposal of treated wastewater.

The storm drainage assessment will include a discussion of the proposed drainage collection system including impacts associated with on-site construction of the storm drainage system. The

EIR will identify permit requirements and mitigation needed to minimize and/or avoid impacts. The proposed infrastructure will be presented.

The EIR will include an assessment for consistency with City and outside agency Master Plans and Management Plans that are directly related to these utilities.

The EIR will analyze the impacts associated with water supply and on-site and off-site construction of the water system, including temporary impacts associated with the construction phase. The results of a project-specific Water Supply Assessment will be provided. The EIR will also identify permit requirements and mitigation needed to minimize and/or avoid impacts, and will present the proposed infrastructure as provided by the Plan Area engineering reports.

The EIR will also address solid waste collection and disposal services for the proposed Specific Plan. This will include an assessment of the existing capacity and project demands. The assessment will identify whether there is sufficient capacity to meet the project demands.

The EIR will provide thresholds of significance, a consistency analysis, cumulative impact analysis, and a discussion of feasible mitigation measures that should be implemented to reduce impacts associated with utilities and service systems.

XX. WILDFIRE

	Potentially Significant Impact	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?			X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?			X	
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			X	

Existing Setting

Cal Fire has designated the entire City of Citrus Heights as a LRA. The Plan Area is not within an area classified as a VHFHSZ. Additionally, the proposed Specific Plan is not located within a SRA. Although this CEQA topic only applies to areas within an SRA or VHFHSZ, out of an abundance of caution, these checklist questions are analyzed below.

Responses to Checklist Questions

Response a): The Plan Area would connect to an existing network of City streets. The nearest fire station (Sacramento Metro Fire District Station 21) is located approximately 3,500 feet to the west of the Plan Area along Greenback Lane. The appropriate turning radiuses have been planned to accommodate fire trucks on-site. Moreover, the proposed Specific Plan would require building construction to meet the fire code requirements, and would have fire hydrants consistent with the standards of the City; such fire hydrants would assist with fire suppression efforts if a fire was to occur on or near the Plan Area. Therefore, impacts from project implementation would be considered ***less than significant*** relative to adopted emergency response plans or evacuation plans. This topic does not warrant additional analysis and will not be addressed further in the EIR.

Response b): The risk of wildfire is related to a variety of parameters, including fuel loading (vegetation), fire weather (winds, temperatures, humidity levels and fuel moisture contents) and topography (degree of slope). Steep slopes contribute to fire hazard by intensifying the effects of wind and making fire suppression difficult. Fuels such as grass are highly flammable because they have a high surface area to mass ratio and require less heat to reach the ignition point. The Plan Area is located in an area that is predominately urban, including mainly residential and commercial uses, which is not considered at a significant risk of wildlife. There are no steep slopes on or near the Plan Area. Therefore, impacts from project implementation would be considered

less than significant relative to the spread of wildfire. This topic does not warrant additional analysis and will not be addressed further in the EIR.

Response c): The project includes redevelopment of infrastructure (water, sewer, and storm drainage) to serve the proposed buildings. The project does not include the construction of fuel breaks, emergency water sources, or power lines. As noted above, the proposed Specific Plan would require fire hydrants consistent with the standards of the City, and such fire hydrants would assist with fire suppression efforts if a fire was to occur. Therefore, impacts from project implementation would be considered ***less than significant*** relative to infrastructure that may exacerbate fire risk. This topic does not warrant additional analysis and will not be addressed further in the EIR.

Response d): The proposed Specific Plan would require the installation of storm drainage infrastructure to ensure that storm waters properly drain from the Plan Area and does not result in downstream flooding or major drainage changes. The storm drainage infrastructure would be designed and engineered to ensure proper construction of storm drainage infrastructure to control runoff and prevent flooding, erosion, and sedimentation.

BMPs will be applied to future development to limit the concentrations of constituents in any site runoff to acceptable levels. Stormwater flows from the Plan Area would be directed to stormwater treatment basins, treatment planters, and bioretention areas by an improved stormwater conveyance system on-site. Stormwater runoff would not be allowed to discharge directly to the existing storm drains without first discharging to the bioretention areas or similar design techniques as provided in the Sacramento Region Stormwater Quality Design Manual. Low impact development strategies and source control measures will be incorporated to treat storm water and reduce runoff. Additionally, erosion and sediment control measures would be implemented during construction.

Runoff from the Plan Area currently flows to the existing City storm drains located in Greenback Lane and Sunrise Boulevard. Upon development of the site, stormwater would flow to the on-site retention basins and/or the existing storm drains in the adjacent roadways.

Landslides include rockfalls, deep slope failure, and shallow slope failure. Factors such as the geological conditions, drainage, slope, vegetation, and others directly affect the potential for landslides. The elevation of the site ranges from approximately 170 feet to 180 feet above MSL. There are no significant slopes on the Plan Area. The project would also be required to comply with the provisions of the California Building Standard's Code, which requires development projects to perform geotechnical investigations in accordance with State law, which include general engineering characteristics of the subsurface conditions within the Plan Area and potential mitigation strategies to address any geotechnical concerns or potential hazards(such as slope failure). Therefore, the potential for a landslide (including rockfalls, deep slope failure, and shallow slope failure) on the Plan Area is low.

Overall, impacts from project implementation would be considered ***less than significant*** relative to risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. This topic does not warrant additional analysis and will not be addressed further in the EIR.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	*Less Than Significant with Mitigation Incorporation*	*Less Than Significant Impact*	*No Impact*
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	X			
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	X			
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	X			

Responses to Checklist Questions

Responses a-c): As discussed in Section IV, Biological Resources, the project does not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal. However, it has been determined that the potential for the proposed Specific Plan to eliminate important examples of the major periods of California history or prehistory; degrade the quality of the environment; create cumulatively considerable impacts; or adversely affect human beings will require more detailed analysis in an EIR. As such, the City of Citrus Heights will examine each of these environmental issues in the EIR and will decide whether the proposed Specific Plan has the potential to have significant impacts on these environmental issues. At this point a definitive impact conclusion for each of these environmental topics will not be made, rather all are considered ***potentially significant*** until a detailed analysis is prepared in the EIR.

Good Afternoon,

Thank you for including Caltrans in the submittal for the Sunrise Tomorrow Specific Plan NOP/NOC. Based on the information provided, we have no comments at this time, but please include us in any future routings pertaining to the project.

Regards,

Benjamin Garcia

Dear Mr. Kempenaar:

RE: SUNRISE TOMORROW SPECIFIC PLAN (PROJECT) NOTICE OF PREPARATION (SCH: 2020080098)

The California Department of Fish and Wildlife (CDFW) received a Notice of Preparation of an Environmental Impact Report (EIR) from the City of Citrus Heights for the Project pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

PROJECT DESCRIPTION SUMMARY

The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan also includes a circulation and open space network to support the future land uses. The Specific Plan would establish a Maximum Development Allowance and Maximum Development by Land Use for each Planning Area. The Maximum Development Allowance by Planning Area is inclusive of all uses and may not

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

DocuSign Envelope ID: 256BF76D-1A1B-4705-93D7-707ABF973066

be exceeded without a Specific Plan Amendment. See Table 2 of the Initial Study for the maximum development allowance. Adoption of the Sunrise Tomorrow Specific Plan would include redevelopment of the existing mall for a variety of land uses (e.g. residential, retail, office, community, and hotel), a street network, vehicular circulation, pedestrian and bicycle network, open space network, and sustainability features.

The Project description in the draft EIR should include the whole action as defined in the CEQA Guidelines § 15378 and should include appropriate detailed exhibits disclosing the Project area including temporary impacted areas such as equipment stage area, spoils areas, adjacent infrastructure development, staging areas and access and haul roads if applicable.

As required by § 15126.6 of the CEQA Guidelines, the draft EIR should include appropriate range of reasonable and feasible alternatives that would attain most of the basic Project objectives and avoid or minimize significant impacts to biological resources.

ENVIRONMENTAL SETTING

CDFW recommends three progressive steps in Project impact evaluations: habitat assessment, detection surveys, and impact assessment in evaluating whether projects will have impacts to special-status species. The information gained from these steps will inform any subsequent avoidance, minimization and mitigation measures. The steps for Project impact evaluations are: 1) habitat assessment, 2) surveys, and 3) impact assessment. Habitat assessments are conducted to evaluate the likelihood that a site supports wildlife species and their habitats. Detection surveys provide information needed to determine the potential effects of proposed projects and activities on those species and habitats. Impact assessments evaluate the extent to which wildlife species and their habitat may be impacted directly or indirectly, on and within a reasonable distance of proposed CEQA Project activities. CDFW recommends that the draft EIR include a complete environmental assessment of the existing biological conditions within the Project area including but not limited to the type, quantity and locations of the habitats, flora and fauna. Maps and information regarding the habitat assessment and survey efforts should be included within the draft EIR. Any surveys of the biological conditions and related environmental analysis should be completed by qualified personnel with sufficient experience in the wildlife and habitats associated with the Project and associated reports should be included as appendices to the draft EIR.

To identify a correct environmental baseline, the draft EIR should include a complete and current analysis of endangered, threatened, candidate, and locally unique species with potential to be impacted by the Project. CEQA guidelines § 15125, subdivision (c) requires lead agencies to provide special emphasis to sensitive habitats and any biological resources that are rare or unique to the area. CDFW recommends that the environmental documentation identify natural habitats and provide a discussion of how the proposed Project will affect their function and value.

CDFW recommends that the California Natural Diversity Database (CNDDB), as well as previous studies performed in the area, be consulted to assess the potential presence of sensitive species and habitats. Although the CNDDB is one tool that may identify potential

DocuSign Envelope ID: 256BF76D-1A1B-4705-93D7-707ABF973066

sensitive resources in the area, the dataset should not be regarded as complete for the elements or areas with the potential to be impacted. Other sources for identification of species and habitats near or adjacent to the Project area should include, but may not be limited to, State and federal resource agency lists, California Wildlife Habitat Relationship System, California Native Plant Society Inventory, agency contacts, environmental documents for other projects in the vicinity, academics, and professional or scientific organizations. In addition, CNDDB is not a comprehensive database. It is a positive detection database. Records in the database exist only where species were detected and reported. This means there is a bias in the database towards locations that have had more development pressures, and thus more survey work. Places that are empty or have limited information in the database often signify that little survey work has been done there. A nine United States Geologic Survey 7.5-minute quadrangle search is recommended to determine what may occur in the region (see Data Use Guidelines on the CDFW webpage https://www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data).

IMPACT ASSESSMENT AND MITIGATION MEASURES

Based on habitat assessments and survey results, the draft EIR should clearly identify and describe all short-term, long-term, permanent, or temporary impacts to biological resources including all direct and foreseeable indirect impacts caused by the proposed Project.

The draft EIR should define the threshold of significance for each impact and describe the criteria used to determine whether the impacts are significant (CEQA Guidelines, § 15064, subd. (f).) The draft EIR must demonstrate that the significant environmental impacts of the Project were adequately investigated and discussed, and it must permit the significant effects of the Project to be considered in the full environmental context. CDFW also recommends that the environmental documentation provide a scientifically supported discussion regarding adequate avoidance, minimization, and/or mitigation measures to address the Project's significant impacts upon fish and wildlife and their habitat. For individual projects, mitigation must be roughly proportional to the level of impacts, including cumulative impacts, in accordance with the provisions of CEQA (Guidelines section 15126.4(a)(4)(B), 15064, 15065, and 16355). In order for mitigation measures to be effective, they must be specific, enforceable, and feasible actions that will improve environmental conditions.

The EIR should incorporate mitigation performance standards that would ensure that significant impacts are reduced as expected. Mitigation measures proposed in the draft EIR should be made a condition of approval of the Project. Please note that obtaining a permit or other authorization from CDFW by itself with no other mitigation proposal may constitute mitigation deferral.

Migratory Birds and Birds of Prey

Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) (16 U.S.C., §§ 703-712). CDFW implemented the MBTA by adopting the Fish and Game Code section 3513. Fish and Game Code sections 3503, 3503.5 and 3800 provide additional protection to nongame birds, birds of prey, their nests and eggs. Potential habitat for nesting birds and birds of prey is present within the Project area. The

DocuSign Envelope ID: 256BF76D-1A1B-4705-93D7-707ABF973066

proposed Project should disclose all potential activities that may incur a direct or indirect take to nongame nesting birds within the Project footprint and its close vicinity. Appropriate avoidance, minimization, and/or mitigation measures to avoid take must be included in the EIR. Measures to avoid the impacts should include species specific work windows, preconstruction surveys, biological monitoring of active nests, installation of noise attenuation barriers, etc.

Landscaping
CDFW has noted that landscaping improvements will be implemented in the Project. CDFW recommends consideration of the Homegrown Habitat Plant List (Sacramento Valley Chapter, California Native Plant Society) (Attachment 1) when developing the final planting palette. The Homegrown Habitat Plant List (HHPL) is the result of a coordinated effort of regional stakeholders with the intent of improving landscape plantings for the benefit of property owners and ecosystem. Including plants from the HHPL is intended to produce the following outcomes for landscaping:

- Increased drought tolerance
- Decreased water use
- Decreased maintenance and replacement planting costs
- Increased functionality for local pollinators and wildlife
    - Increase in overall biodiversity and ecosystem health
- Increased carbon sequestration and climate change resilience

The Project presents a unique opportunity for the City to restore habitat values to a highly urbanized area while also promoting sustainable practices.

Creek Restoration
As part of the proposed Project, an existing on-site creek along Sunrise Boulevard (located in the southwestern corner of the Plan Area) may be restored and the associated native riparian habitat would be restored. A public trail would be provided adjacent to the restored creek. As a part of this potential effort, CDFW recommends the City consult Part XI, Riparian Habitat Restoration, of the California Salmonid Stream Habitat Restoration Manual (CDFW 2003) (Attachment 2) when designing the Project. The manual includes techniques and plants lists that could assist the City in planning and implementing a valuable habitat restoration project. CDFW also recommends the City consider creating a sustainable use trail with a strategic interpretive plan that guides recreationists through the area. The plan could include signage and fences to protect sensitive habitat features and may educate recreationists about native fish, wildlife, and plant species of the Sacramento area. CDFW welcomes any opportunity to participate in restoration and/or interpretive planning at the City's discretion.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field

DocuSign Envelope ID: 256BF76D-1A1B-4705-93D7-707ABF973066

survey form can be found at the following link: http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDB_FieldSurveyForm.pdf. The completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: http://www.dfg.ca.gov/biogeodata/cnddb/plants_and_animals.asp.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying Project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CONCLUSION

CDFW appreciates the opportunity to comment on Notice of Preparation and assist the Lead Agency in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Dylan Wood, Environmental Scientist at 916-358-2384 or dylan.a.wood@wildlife.ca.gov.

Homegrown Habitat Plant List 2019

	A	B	C	D	E	F	G	H
1	Bloom	Common Name	Scientific Name	Life Cycle	Height	WUCOL	Sun	Notes
2	Early	Western Redbud	Cercis occidentalis	P	10'-20'	L	S/PS	Drought-tolerant; also tolerates semi-riparian conditions
3		Red Willow	Salix laevigata	P	30'-50'	H	FS	Wetland-semi riparian; tolerates clay soils; fast grower, semi-deciduous
4		Arroyo Willow	Salix lasiolepis	P	7'-35'	H	FS	Likes marshes/wet areas; spreads by root runners; deciduous
5		Sandbar Willow	Salix exigua	P	10'-23'	H	FS	Constant moisture; spreads by basal shoots to any moisture
6		Valley Oak	Quercus lobata	P	60'-100'	L	FS	Fast growing (20' in 5 years); drought tolerant
7		Scrub Oak	Quercus berberidifolia	P	15'-20'	L	FS/PS	Smaller, drought tolerant, likes medium fast drainage
8		Buck Brush	Ceanothus cuneatus	P	5'-12'	VL	FS	Needs fast drainage; fast to moderate growth, evergreen
9		California Everlasting	Psuedognaphalium californicu	P	3'	VL/L	FS	Semi deciduous, may like some afternoon shade in summer
10		California Blackberry	Rubus ursinus	P	6'	M/H	FS/PS/S	Requires substantial moisture, wide spreading
11		Dutchmans Pipe	Aristolochia californica	P	20'	L/M	S/PS	Deciduous vine, grows in moist woods along streams
12		Baby Blue Eyes	Nemophila menziesii	A	.25'	L	FS/PS	Annual herb
13		Chinese Houses	Collinsia heterophylla	A	.5'	M	S/PS	Annual purple flowering herb, good in containers
14		Lacy Phacelia	Phacelia tanacetifolia	A	3'	VL/L	FS	Tolerates clay soils; good plant for biological pest control
15		Miners Lettuce	Claytonia perfoliata	A	1.3'	L/M	PS	Edible spreading annual herb; in the valley, does best in part shade
16								
17	Early-Mid	Blue Elderberry	Sambucus nigra var. cerulea	P	20'-30'	M	FS	Easy to grow, fast growing deciduous shrub/tree; host plant for endangered Valley Elderberry Longhorn Beetle
18		Interior Live Oak	Quercus wislizenii	P	15'-50'	VL	S/PS	Medium to large evergreen, moderate grower
19		Blue Oak	Quercus douglasii	P	16'-82'	VL	FS/PS	Slow grower deciduous, supports many species
20		Toyon	Heteromeles arbutifolia	P	12'	L	FS/PS	Evergreen shrub easy to grow, white flowers early summer, red berries in fall
21		Shining Willow	Salix lasiandra	P	3'-30'	M/H	FS/PS	Winter deciduous riparian plant, good for restoration projects
22		Mountain Mahogany	Cercocarpus betuloides	P	8'-20'	VL/L	FS/PS	In the valley this plant will do better with PM shade
23		Hollyleaf Redberry	Rhamnus ilicifolia	P	9'	L	PS	PM shade in the valley, siting is critical for success
24		California Broom/Deerwe	Acmispon glaber	P	3'	VL	FS	Not too showy subshrub with high habitat value
25		Skunkbush, Fragrant Sum	Rhus aromatica	P	8'	L	FS/PS	Winter deciduous shrub, may like PM shade in valley
26		Chaparral Honeysuckle	Lonicera interrupta (hispidula	P		VL/L	FS/PS	Hardy, woody chaparral shrub/vine, summer flowering, edible/bitter berries
27		Silver Bush Lupine	Lupinus albifrons	P	3'	L	FS/PS	Requires good drainage, PM shade in valley
28		Foothill Penstemon	Penstemon heterophyllus	P	5'	L	FS/PS	Perennial evergreen herb. May need pm shade in valley
29		Sonoma Sage	Salvia sonomensis	P	1.3'	VL	PS	Moderately drought tolerant if given part shade
30		Purple Needlegrass	Stipa pulchra	P	3'	VL/L	FS	CA state grass, perennial with deep roots
31		California Poppy	Eschscholzia californica	A	.5'	VL/L	FS	CA State flower, tolerates clay soil, readily reseeds
32		Elegant Clarkia	Clarkia unguiculata	A	.5'	L	FS/PS	Showy pink flowers, reseeds readily
33		Globe Gillia	Gillia capitata	A	1'	L/M	FS	Showy pink to lavender flowers
34		Miniature Lupine	Lupinus bicolor	A	1.3'	L	FS	Showy purple and white flowers, plant with CA poppies
35		Sky Lupine	Lupinus nanus	A	2'	L	FS	Chaparral annual herb

Homegrown Habitat Plant List 2019

	A	B	C	D	E	F	G	H
36	Bloom	Common Name	Scientific Name	Life Cycle	Height	WUCOL	Sun	Notes
37	**Mid**	California Buckwheat	Eriogonum fasciculatum	P	2.5'	VL/L	FS	Tough, easy to grow, prefer good drainage
38		Hoary Coffeberry	Frangula californica var tome	P	20'	L	FS/PS	May prefer PM shade in valley
39		California Wildrose	Rosa californica	P	8'	M	FS/PS	Tolerates clay soils; drought-tolerant; spreads through underground runners
40		California Wild Grape	Vitis californica	P	10'-40'	L/M	FS/PS	Common along rivers and streams, winter deciduous
41		Common Yarrow	Achillea millefolium	P	3'	L-H	FS/PS	Looks best with regular water; semi deciduous in drier conditions; can be aggressive
42		Coyote Mint	Monardella villosa	P	2'	L	PS/S	Requires good drainage, needs PM shade in the valley
43		Showy Milkweed	Asclepias speciosa	P	5'	L/M	FS	Tolerates clay soils; spreads through underground rhizomes
44		Imbricate Phacelia	Phacelia imbricata	P	1'	L	FS/PS	Perennial herb; tolerates clay soil; can re-seed
45		Woolly Sunflower	Eriophyllum lanatum	P	2'	L	FS/PS	Summer semi-deciduous; can be extremely drought-tolerant
46		Nude Buckwheat	Eriogonum nudum	P	6'	L	FS	Summer semi-deciduous; leafless stems
47		Blue Wild Rye	Elymus glaucus	P	5'	L	FS/PS	Popular accent grass for gardens; summer semi-deciduous
48		Deergrass	Muhlenbergia rigens	P	5'	L	FS	Attractive bunch grass; easy to grow; grows in most soils
49		Fleabane Daisy	Erigeron foliosus	P	3.3'	L	PS	
50		Lippia	Phyla nodiflora	P	6''	L	FS/PS	Flowering ground cover; spreads rapidly
51		Spider Lupine	Lupinus benthamii	A	2.3'	VL	FS	
52		Seep Monkeyflower	Erythranthe guttata	A	5'	M/H	FS/PS	Aquatic annual plant; good in ponds or rain gardens
53								
54	**Mid-Late**	Narrowleaf Milkweed	Asclepias fasicularis	P	1.5'	M	FS	Not showy; tolerates clay; host to Monarchs
55		Virgin's Bower	Clematis ligusticifolia	P	30'	L/M	PS/SH	vine; showy white flowers; summer deciduous; part shade to shade
56		Hooker's Evening Primros	Oenothera elata	P	5'	M-H	FS/PS	Wetland-riparian but still drought tolerant; reseeds aggressively
57		California Fuchsia	Epilobium canum	P	3'	L	FS	Hummingbird favorite; spreads; cut back in winter
58		Gumplant	Grindelia camporum	P	4'	L	FS	Tolerates most soils; can be cut back in winter
59		Snowberry	Symphoricarpos albus	P	6'	L	PS/SH	Moist shady areas; winter deciduous; spreads by rhizomes
60		Slender Woolly Buckwhea	Eriogonum gracile	A	5'	EL/VL	FS/PS	Small annual; tolerates most soils; winter semi-deciduous
61		Common Madia	Madia elegans	A	7'	L	FS/PS	Annual herb; showy yellow flowers; tolerates many soils
62		Common Sunflower	Helianthus annuus	A	5'	M	FS	Tolerates most soils; can get very large
63								
64	**Late**	California Aster	Symphyotrichum chilense	P	5'	VL/L	FS/PS	Tolerates clay soil; winter deciduous; cut back in winter; aggressive spreader
65		California Goldenrod	Solidago californica	P	3'	VL/M	FS/PS/S	Easy to grow; for late color plant with Epilobium canum; spreader
66		Sulphur Buckwheat	Eriogonum umbellulatum	P	7'	VL/M	FS	Showy yellow flowers; variable plant; evergreen
67		Bee Plant	Scrophularia californica	P	4'	L	PS	Strong bee attractant; tolerates most soils; needs good drainage
68		Coyote Brush	Baccharis pilularis	P	10'	VL/L	FS/PS	Tour easy to grow shrub; variable forms; blooms into winter
69		Rubber Rubberbrush	Ericameria nauseosa	P	9'	L	FS	Needs good drainage; summer/fall bloom
70		Vinegarweed	Trichostema lanceolatum	A	1'	L	FS	Does not do well in seed mixes; sow individually; tolerates dry clay soils

ACKNOWLEDGEMENTS

Circuit Rider Productions, Inc. (CRP) developed Part XI, Riparian Habitat Restoration under a grant agreement with the California Department of Fish and Game. Circuit Rider Productions, Inc, is a community-based agency dedicated to the enhancement of human and ecological systems. CRP has been engaged in ecological restoration in California since 1976. The following CRP staff collaborated in the development of Part XI, Riparian Habitat Restoration:

Name and Title	Role in Project
Rob Evans, Restoration Projects Manager	principal plant and habitat photographer
Karen Gaffney, Restoration Ecologist	principal writer, miscellaneous photography
Katherine Gledhill, Environmental Educator	editing, desktop publishing
Cheryl Dean, Ecologist/Research Coordinator	research, editing, technical writing
Greg Fisher, Ecological Services Technician	research, technical writing

The editors of Volume II of the Manual wish to thank those who reviewed this part of the Manual and provided comments or ideas on riparian restoration. From the California Department of Fish and Game these include: Chris Ramsey, Glenn Yoshioka, Shirley Lipa and Doug Albin.

Special recognition goes to the members of the California Coastal Salmonid Restoration Grant Peer Review Committee for funding the printing of Part XI. Without the financial support of this committee the development and printing of Volume II of the Manual would not be possible.

PART XI. RIPARIAN HABITAT RESTORATION

INTRODUCTION

Natural riparian habitat includes the assortment of native plants that occur adjacent to streams, creeks and rivers. These plants are well adapted to the dynamic and complex environment of streamside zones.

Approximately 95% of the historic riparian habitat has been lost in California, making way for cities, agriculture, mining and other development. The riparian area provides one of the richest habitats for large numbers of fish and wildlife species which depend on it for food and shelter. Many species, including coho and Chinook salmon, steelhead, yellow-billed cuckoo and the red-legged frog, are threatened or endangered in California. Others are rapidly declining.

Most landowners wish to protect their riparian resources while optimizing the value and productivity of their property. These two goals sometimes seem to conflict. An understanding of riparian habitat and stream processes can help landowners conserve riparian resources, and still manage their property productively, and even enhance their property value.

California residents, landowners, land managers, and agencies are increasingly interested in conserving and enhancing watersheds and implementing management practices that are more fish friendly. The riparian corridor is the critical interface between terrestrial and aquatic systems. Increasing numbers of individuals and community groups are involved in habitat conservation and restoration projects in riparian areas. Part XI is intended to encourage and help facilitate the stewardship and restoration of riparian habitat in California watersheds.

In addition to providing basic information about riparian corridors, this Part is intended to assist agencies, landowners, schools and community groups with the planning and implementation of native plant revegetation projects. A plant identification section at the end of Part XI provides detailed descriptions and photographs of plants commonly found along central and north coast California rivers and streams.

STREAM PROCESSES AND RIPARIAN HABITAT

The plant species found in riparian communities differ widely depending upon the character of the watershed and the stream's location within the watershed. The composition of a riparian community is determined by many things, including the reach type, stream slope (gradient), channel confinement, aspect, light availability, water availability, flooding and soil conditions.

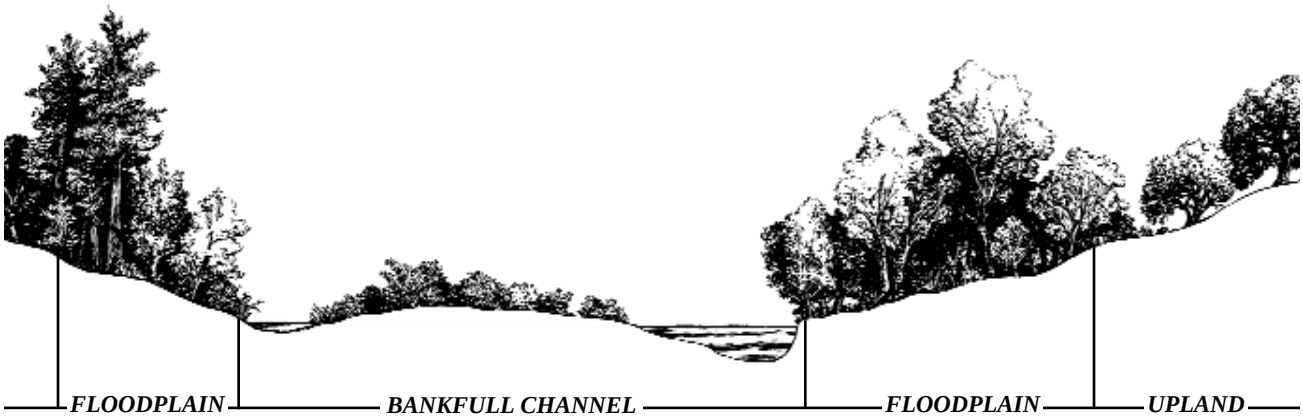
For example, at the headwaters of a stream, the gradient is often steep and the riparian vegetation may not vary from the surrounding forest plant community. Further downstream, as the gradient decreases, the riparian corridor begins to differ from the surrounding forest plant community. The riparian canopy is often dominated by trees such as alder, ash, maple, box elder, and oaks, while the surrounding forest may be dominated by conifers. In alluvial areas, sunny openings on gravel bars often provide habitat for species such as mulefat and willow.

Different age classes and species of riparian habitat at different elevations

Streams and their tributaries often cut through broad alluvial valleys. In these alluvial zones, where the substrate is dominated by sand, gravel and silt, the stream freely moves (meanders) back and forth over time, creating and removing riparian habitat naturally. The ability of the stream to move through this meander corridor is what allows the development of diverse riparian forests. Streams in these alluvial areas may have historically included a broad floodplain mature forest with backwater sloughs, oxbow lakes and floodplain wetlands. These diverse habitat features are important for salmonids and other wildlife. Riparian corridors that are wide enough to allow for stream meandering should require little maintenance over the long term. A substantial riparian zone can help to reduce erosion damage to adjacent lands, as well as filter sediment and pollutants. However, due to the high value of agricultural lands as well as the proximity of urban development and other land uses, natural stream movement may not be possible in all managed watersheds.

Russian River meander corridor

Within the bankfull channel (an area which is regularly flooded), plants are adapted to high levels of flood disturbance during the winter, while tolerating the hot, dry conditions of the gravel bars during the summer. Very few species have the ability to survive in this harsh channel environment; those that do include alder, willow, cottonwood and mulefat. They are called pioneer species, because they colonize recently disturbed sites.



Bankfull channel with small seedlings of pioneer species

The seeds of cottonwood and willow float through the air in the spring just as the water level is beginning to recede. Millions of seeds land on moist gravel bars and germinate there. As the summer progresses, the roots of these tiny seedlings follow the receding water table. Those plants that cannot stay connected to the water table face certain death on the desert-like gravel bar. Those plants that survive the summer drought and winter flood cycle will grow at incredible rates, up to 15 feet per year. As they grow, these pioneer species may begin to trap sediments, and can influence the movement of the stream.

The floodplain is elevated above the bankfull channel and is characterized by many more species than found in the bankfull channel. Floodplain areas support plants that are less adapted to flood scour and do not require as much summer moisture.

Floodplain riparian forests are some of the most important, *and the most impacted*, habitats in California. Intact riparian forests tend to be a dense tangle of large trees in the over-story, and smaller trees, vines, downed wood, and various herbs and fungi in the under-story. The diversity of plants and complexity of habitats in these mature riparian forest zones supports an incredible number of animal species.

Representative cross-section of riparian area

FISH AND WILDLIFE VALUES OF RIPARIAN HABITAT

Salmonids (including coho, Chinook and steelhead) rely on healthy riparian habitat. Riparian trees shade the stream channel, helping to cool the water and retain high levels of dissolved oxygen.

Salmonid

Native streamside vegetation provides leaf litter which is eaten by many aquatic insects. These insects are in turn consumed by fish. Roots of riparian plants provide fish with shelter from predators. When large riparian trees fall into the stream, they supply an important structural element in creeks and rivers which helps form pools, sort the substrate, and provide shelter for fish and other aquatic organisms.

Salmonid

Riparian zones along intermittent streams also provide salmonid habitat. Coho salmon and steelhead spawn in the upper reaches of streams and their tributaries while they are flowing in winter. The fry emerge and migrate down to the perennial reaches before the tributaries dry up in summer. These tributaries also serve as important sources of food, spawning gravel, and woody debris that are flushed into the mainstem of a stream during storms. Therefore, alterations to the riparian zones of these seasonal tributaries can have a significant impact on salmonids.

Pacific tree frog (Hyla regilla)

In addition to the important role they play in the salmonid life cycle, riparian areas support an abundance of other wildlife species. Over half of the reptiles and three-fourths of the amphibians in California, including the western pond turtle, red-legged frog and various tree frogs, live in riparian areas. Large numbers of migratory and resident birds rely on streamside habitat. Over one-hundred native species of land mammals are dependent on the riparian zone, including raccoons, ringtails, and river otters. Black-tailed deer utilize riparian zones for fawning.

In an intact riparian corridor, there is a layering effect of plant sizes, shapes and ages that promotes wildlife diversity. A mature riparian forest has a low layer of groundcover, an intermediate layer of shrubs and small trees, and a high canopy of trees and vines. These different layers provide many sites for shelter and food for birds, insects and mammals. In addition, large trees will mature and die, leaving standing snags that provide habitat for cavity nesting birds and other terrestrial wildlife.

Bobcat

Finally, riparian areas act as wildlife corridors, providing important routes for the movement of aquatic species (fish, amphibians, insects), land animals (reptiles and mammals), and birds within a watershed. Stream corridors can be thought of as the circulatory system of the watershed, allowing terrestrial wildlife and fish to migrate up and downstream.

HUMAN VALUES OF RIPARIAN HABITAT

Riparian habitat provides many benefits to streamside landowners. For example, a wide strip of riparian vegetation can offset flood damage to adjacent agricultural lands by acting as a filter for trees and other debris that may wash in during large floods. Riparian vegetation also traps fine sediments and other pollutants contained in terrestrial runoff, thereby preserving instream water quality. Because of their deep roots and dense growth, riparian trees, shrubs, and grasses provide excellent protection against bank erosion, helping to stabilize streambanks.

In addition to assisting with flood protection and erosion control, riparian vegetation may play a role in integrated pest management. Cavity nesting riparian bird species such as kestrels and owls prey on rodents. Other cavity nesting birds such as wrens, tree swallows, oak titmice and bluebirds may help reduce populations of pest insects. Bobcats, coyotes and foxes also use riparian areas to prey on rodents.

Kestrel

Indigenous cultures have relied upon riparian plants for thousands of years, using streamside and wetland plants for basketmaking, as a source of food, and for medicinal purposes.

HUMAN IMPACTS TO RIPARIAN HABITAT

More than 95% of the historic riparian forests in California have been lost due to land use change since European settlement. Logging, urban development, dams, water diversions, gravel mining, and agriculture have all contributed to this loss.

The straightening of creeks for commercial, residential and agricultural activities, and floodplain development, has reduced the width and maturity of the riparian zone, and accordingly changed the river's form through erosional and depositional processes. Dams retain sediment, cut off critical salmonid spawning habitat and may either augment or reduce the natural flow regime. These changes have contributed to the decline of wild salmonids. California rivers once meandered across their forested floodplains, overflowing their banks as a result of winter rains, thus creating a complexity of habitat types. Currently many rivers and creeks have been severely confined, degraded and simplified, resulting in a significant loss of salmonid habitat and biological diversity in general.

Non-Native Invasive Plant Species

Humans have modified riparian areas throughout California in a variety of ways. One of the more serious impacts to native habitats is the introduction of non-native plant and animal species. Invasive plants are a topic of increasing concern for landowners and conservationists. Exotic or non-native plants, such as giant reed (*Arundo donax*) and tamarisk, have spread rapidly and taken over thousands of acres of streamside habitat. These invasive species exclude native vegetation, may increase fire danger and often use large amounts of water, decreasing available resources for fish, wildlife and humans.

Exotic plants usually do not support the same diversity of wildlife found in native riparian forests. If plants such as giant reed or periwinkle dominate the riparian zone, native riparian plants cannot become established. When this happens, the habitat values are often degraded or lost. For example, when an invasive grass such as giant reed becomes established in a riparian area, out-competing native trees such as bay laurel, cottonwood and big leaf maple, the long term consequence is that the large woody debris, shade canopy and leaf litter provided by native species are lost. This results in changes in stream temperature and modification of instream structure and the aquatic food chain. The once complex riparian forest that provided shade, food and structure for salmonids and other species is transformed into a monoculture of grass with very little habitat value. Because riparian species are not especially long lived (20-80 years is typical) invasive species can have extremely negative effects on riparian areas in a relatively short period of time.

Giant reed (Arundo donax)

The following species are common exotic invasive plants found in northern and central California riparian areas, and are pictured in Appendix XI-B:

Common Name	Latin Name	Plant Type
acacia	*Acacia* spp.	tree
cape ivy	*Delairea odorata*	vine
English ivy	*Hedera helix*	vine
eucalyptus	*Eucalyptus* spp.	tree
fennel	*Foeniculum vulgare*	herb
floating primrose	*Ludwigia peploides*	emergent/aquatic
giant reed	*Arundo donax*	grass
Himalayan blackberry	*Rubus discolor*	vine
pampas grass	*Cortaderia selloana*	grass
pepperweed	*Lepidium latifolium*	herb
periwinkle	*Vinca major*	vine
poison hemlock	*Conium maculatum*	herb
tamarisk	*Tamarix* spp.	shrub/tree
teasel	*Dipsacus fullonum*	herb
tree of heaven	*Ailanthus altissima*	tree
yellow star thistle	*Centaurea solstitialis*	herb

Agricultural/Riparian Interface: Pierce's Disease

Pierce's Disease is a fatal disease of grapevines caused by the bacterium *Xylella fastidiosa* which is transmitted by the blue-green sharpshooter insect (*Graphocephela atropunctata*). Certain riparian plants are hosts for the bacteria as well as feeding and breeding hosts for the blue-green sharpshooter. These plants include both native and non-native species and are listed below. In the past, a common practice was to remove all riparian plants adjacent to vineyards in an effort to reduce the incidence of Pierce's Disease. Recent practices have changed to reflect a more surgical approach to removal that only focuses on those plants that are systemic hosts for the bacteria. In systemic host plants, the *Xylella* bacteria spreads systematically throughout the plant after being bitten by the insect. However, in propagative host plants, the bacteria remain at the point of infection and do not spread systemically. Propagative host species are therefore not a high priority for removal. Species such as the invasive, non-native periwinkle (*Vinca major*) are systemic hosts for the bacteria and a breeding/feeding host for the blue-green sharpshooter. These plants are a high priority for removal from an economic perspective, and their removal benefits native riparian habitat as well.

Periwinkle (Vinca major)

The following perennial plants are the major breeding hosts for the blue-green sharpshooter and most are systemic hosts of Pierce's Disease in Napa, Sonoma, and Mendocino counties. Removal of these species has been shown to significantly reduce the number of blue-green sharpshooters in riparian areas and adjacent vineyards (The Pierce's Disease/Riparian Habitat Workgroup, 2000):

NON-NATIVE HOST PLANT LIST

Common name	**Latin name**
Himalayan blackberry	*Rubus discolor*
periwinkle	*Vinca major*
wild grape*	*Vitis* sp.

* (escaped cultivar or *Vitis californica* hybrid)

NATIVE HOST PLANT LIST

Common name	**Latin name**
blue elderberry	*Sambucus mexicana*
California blackberry	*Rubus ursinus*
California grape	*Vitis californica*
mugwort	*Artemisia douglasiana*
mulefat	*Baccharis salicifolia*
stinging nettle	*Urtica dioica*

Himalayan blackberry (Rubus discolor)

Mugwort (Artemesia douglasiana)

For more information on the complex topic of Pierce's Disease in north coast streams, visit *www.cnr.berkeley.edu/xylella*, or call your local University of California Cooperative Extension office.

CONSERVATION AND MANAGEMENT OF RIPARIAN HABITAT

Riparian zone in winter with leafless deciduous trees

Many landowners already have intact, healthy riparian corridors on their properties and simply want to preserve these areas in their present state. Others may have riparian areas that are in need of management, due to problems with invasive plants, Pierce's Disease or changes from upstream and downstream land uses. Many landowners are also interested in active restoration of native riparian habitats. The following sections discuss methods for preserving, managing and restoring healthy riparian corridors.

Conserving Riparian Habitat

Healthy riparian corridors require little maintenance over the long term. A stream system that has enough room to move around will sustain a diversity of plant and animal species. Leaving the stream enough elbow room may also protect adjacent land uses from excessive erosion or flood damage.

For those landowners who wish to preserve the integrity of their riparian zones, regular monitoring is recommended. Monitoring can be as simple as walking the stream yearly or seasonally, assessing changes in the stream after a storm or checking for invasive plants or trash that may have been carried in during a flood. More detailed habitat inventory methods are described in Part III of the *California Salmonid Stream Habitat Restoration Manual.*

Conservation of riparian habitat can also be accomplished by placing an easement over the stream corridor. Some conservation easements provide permanent deed guidelines for riparian land uses. Placement of a conservation easement may also provide a tax benefit to the landowner. Some land trust organizations purchase easements from willing sellers.

For more information about conservation easements and land trust organizations, visit the Land Trust Alliance website at *www.lta.org*.

Managing Riparian Habitats

Vegetation Management

In some cases, active management of the riparian zone may be required. Landowners who have concerns about Pierce's Disease may choose to remove certain plants from the riparian areas adjacent to their farming operation. Additionally, invasive plants, such as giant reed, ivy or tamarisk, should be removed before they become a significant problem.

Manual cutting of giant reed biomass

Surgical removal of native and non-native plants along with re-planting of natives is preferred to the wholesale removal of all riparian habitat. While planning for any riparian vegetation project, contact the Department of Fish and Game for technical assistance. Depending on the project, permits may be required from several different local, state or federal agencies. See Part VI for more information on permits.

Riparian forest invaded by periwinkle

The following non-toxic treatments require a significant commitment of time and labor. These treatments need to be based on an understanding of each plant's physiology (i.e., timing of flowering, size and structure of the root system, etc.). For example, a species such as yellow star thistle may be partially controlled by mowing, but the mowing treatment must take place prior to seed development, or it will cause seed dispersal and make the problem worse. Root removal options will vary according to the species. Young tamarisk or tree of heaven seedlings can be pulled using hand tools, but mature plants may require heavy equipment, potentially a cause of excessive disturbance and siltation in the riparian zone. Disturbed areas should be treated to prevent siltation to the stream. Species such as Himalayan blackberry and periwinkle may have extensive root

systems that are difficult to track down and remove. Burning may be accomplished with a backpack torch, but can only take place when there is no threat of wildfire. Tarping is usually implemented after the rainy season has ended. Tarps are then removed prior to the next rainy season. Removal of undesirable plants should be followed with a revegetation program using appropriate native plants which may help to prevent recolonization by other invaders.

There are a variety of non-toxic ways to remove unwanted plant species, and each option should be thoroughly evaluated. Listed below are some non-toxic control options for a variety of invasive non-native plant species. In general, invasive species control will take several years, and will require very careful monitoring and removal of re-growth to ensure success.

Common Name	**Latin Name**	**Removal Options**
acacia	*Acacia* spp.	root removal
cape ivy	*Delairea odorata*	root removal
English ivy	*Hedera helix*	root removal, burning
eucalyptus	*Eucalyptus* spp.	root removal
fennel	*Foeniculum vulgare*	root removal, mowing, burning
giant reed	*Arundo donax*	tarping, hand removal (gravel bars)
Himalayan blackberry	*Rubus discolor*	root removal, burning
pampas grass	*Cortaderia selloana*	root removal
pepperweed	*Lepidium latifolium*	root removal, mowing
periwinkle	*Vinca major*	root removal, tarping
poison hemlock	*Conium maculatum*	root removal, mowing, burning
tamarisk	*Tamarix* spp.	root removal, burning
teasel	*Dipsacus fullonum*	root removal, mowing
tree of heaven	*Ailanthus altissima*	root removal
yellow star thistle	*Centaurea solstitialis*	root removal, mowing, burning

If herbicide is being used for the control of invasive plants, extra care should be taken to avoid impacts to the aquatic environment, as well as overspray onto native vegetation. Soils in the riparian zone are very porous. The absolute minimum effective amount of herbicide (per the label) should be used, as excess herbicide is likely to be transported through the air or soils into the stream. Certain herbicides are specially formulated to be less toxic to aquatic organisms and are more appropriate for use in or near aquatic environments. Consultation with your local Agricultural Commissioner's office is required by law.

The following websites provide additional information about invasive species and control options:

Large Woody Debris

Riparian trees that fall into the stream play an important role in the aquatic system. They provide structure to the stream environment, helping to form pools as well as habitat for a variety of organisms. Large woody debris is an important factor in the recovery of salmonid populations. It is, therefore, desirable to retain a wide riparian corridor with large trees that may be recruited into the stream.

Historically, the approach by many agencies and landowners has been to keep the stream channel clean and open, by removing any log debris accumulation. It was believed that these large trees presented a passage problem for fish. It has since been recognized that fish, especially salmonids, are capable of passing over or through most debris accumulation. Substantial retention of sediment above debris accumulation may indicate a potential fish passage problem. Streams with large woody debris provide good quality salmon habitat.

Large woody debris creates pool habitat

Large woody debris provides structure to the stream environment

Streamside landowners are understandably concerned that large fallen trees may divert the stream towards their banks, causing massive erosion and loss of land. In these cases, large trees are often removed from the system prior to the next flood event. In recent years, there has been a trend towards modification of large debris accumulation, rather than complete removal. An example of this might include pruning tree limbs and allowing the trunk to remain in the stream. This approach allows for the habitat benefits associated with large woody debris, while resolving problems such as fish passage. Contact the California Department of Fish and Game for more information on this topic. See Part VII on barrier modification and log structures for habitat enhancement.

RESTORATION OF NATIVE RIPARIAN HABITATS

Natural Regeneration and Exclusionary Fencing

Riparian systems are often capable of rapid natural regeneration after a disturbance such as a flood, fire or other event causing modification to the landscape. The gravel bars and banks in the bankfull channel will often revegetate on their own within a year or two, provided there is an upslope or upstream source of seeds or plant material. Floodplain areas may take significantly longer and may warrant active revegetation to jump start the natural regeneration process.

Stream floodplain being grazed by livestock

In areas that are being grazed by livestock or are heavily impacted by other native grazing herbivores, exclusionary fencing can give the streambank enough protection to re-create healthy stands of native vegetation. Fencing may be temporary, maintained just long enough to allow native trees and shrubs to re-establish (ten years is often adequate).

If fencing is used to allow for the regeneration of riparian habitat, it should be set back far enough to allow the stream to meander and create a diversity of habitat. Fences placed too close to the stream corridor may be damaged during high flows, wasting time and money.

Exclusionary fencing along stream headwaters

Fencing design, including type of wire, gauge and spacing must be specific to the types of animals you are attempting to exclude. Many fencing supply stores have this information and can help you with construction specifics. Alternative water sources for livestock should be devloped to keep them out of the stream channel. If conditions require that livestock access the stream for pasturing or crossing between pastures, use specialized floating fences (which span the channel) to limit such access. When funding restoration projects, the Department of Fish and Game requires a riparian management plan to be developed and signed by the landowner. For more detailed information on exclusionary fencing, see Part VII.

Erosion Control

Large flood events may create the need for erosion control work in the riparian zone to prevent excess siltation into the stream or loss of land. Whenever possible, a vegetative method for reducing erosion such as bioengineering is preferable to a structural approach such as riprap. Structural approaches to stream bank erosion such as riprap tend to fix the stream in one place, exclude riparian vegetation, and prevent the natural movement that creates diverse habitats. Structural approaches are often more expensive, require permits, and may damage neighboring properties. Over the long term, structural approaches tend to fail or require excessive maintenance. If a structural approach is unavoidable, native vegetation should be incorporated into the structure. Bioengineering will increase the effectiveness of the erosion control method and provide some habitat value as well. See Part VII for descriptions of bioengineering.

Installation of erosion control

Planning and Implementing a Successful Revegetation Project

Revegetation using native plants is effective for enhancing habitat for numerous fish and wildlife species, as well as reducing upslope erosion and sedimentation to streams. Revegetation may include:

- broadcast seeding of native grass or forbs on hillslopes
- instream sprigging of dormant willow cuttings to increase cover and reduce bank erosion
- installation of plants propagated in a native plants nursery
- transplanting of emergent species such as rush, tule or sedge
- direct seeding of native species such as oaks or buckeyes.

The landowner, project personnel, or watershed organization should become acquainted with the stream processes and natural habitat of the area to create a plan that works within the local riparian ecosystem. While planning for any riparian vegetation project, contact the Department of Fish and Game or the Natural Resources Conservation Service for technical assistance. Depending on the project, permits may be required from several different local, state or federal agencies.

Tree shelter installation

Creating and implementing a revegetation project can be a complex process, taking four to six months for design and approval, and several additional months for implementation. In some cases, involving a consultant or watershed group with expertise in the process can save time and be more cost effective. See Part VI for more information on permits.

Riparian Revegetation Project Planning

A successful revegetation project will:

- establish a diversity of native plant types and plant species in the riparian area
- provide fish and wildlife habitat
- reduce erosion
- require minimal annual management.

Revegetation should attempt to replicate the natural system.

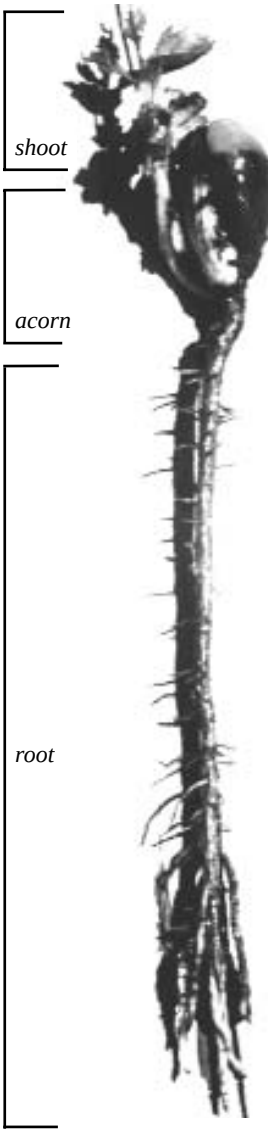
In the riparian zone, different species are adapted to distinct microsites, often based on elevation and proximity to the stream. Planning of a riparian revegetation project should take into account where each species occurs in the natural system. It can be helpful to draw a cross-sectional diagram of the riparian zone showing where different species occur. This can help determine planting sites based on elevation above the bankfull channel.

Diverse riparian and upland habitat

In general, container planting in the bankfull channel is not recommended.

If there is a severe bank erosion problem, or the system has lost all upstream sources of seed, some active channel revegetation may be warranted. Since the bankfull channel is subject to regular flooding, installed plants are likely to wash out prior to establishing a root system. Willows, whether as sprigs, a willow mattress or willow wall, are adapted to this flood prone environment, and can be an effective, relatively inexpensive way to stabilize a streambank or introduce cover to the stream. Plants installed in the bankfull channel should not have protective hardware, as it will likely be lost to flooding.

Seeds, cuttings or transplants should be collected as close as possible to the project site.



Local collection of plant material ensures that only genetically appropriate plants (i.e., those that are adapted to local conditions) will be used on site. Introduction of plant material from outside of the project watershed is not recommended. The use of local plant material usually results in higher survival rates.

Valley oak (Quercus lobata) an important native seed

Sources for Native Plant Material

Appropriate, site specific native plants are one of the most important aspects of a successful riparian restoration project. Project planning may need to begin up to 18 months in advance to obtain those species that must be grown in containers. For example, a particular species may have seed that ripens in July. After treatment of the seed and propagation in the nursery, the plant may not be ready for outplanting until the following fall/winter. This is often the most important phase of planning a successful restoration project. If you are not in a position to grow the plants yourself, it is a good idea to order plants from a local native plants nursery as soon as you have selected a restoration site.

Bare-root stock can also be used instead of container stock. However, bare-root stock is often difficult to locate because few nurseries produce it. Spacing of plants depends on the species, the goals of the project, desired densities, and many other factors. General spacing recommendations are included in Table XI-1, page XI-26.

Nurseries specializing in California native plants do things differently than typical landscape nurseries. California native plant nurseries usually custom collect site specific material for particular restoration projects, or at minimum, they track where the plant material was collected. This ensures that you can purchase plant material suitable for your project site.

The California Native Plant Society website, *http://www.cnps.org/links/grow links.htm* includes a variety of resources about California flora, including a list of native plant nurseries.

Common container sizes found in native plants nurseries are listed below:

Container Name	Size	Uses
6” and 8” supercell	1 1/8” x 6” 1 1/8” x 8”	Best for plants with fibrous root systems
deepots	2 1/2” x 10”	Good for trees and shrubs
treepot	4” x 14”	Generally used for trees
treebands	2 1/2” x 5”	Good for trees and shrubs

Native plants nurseries also use unique containers like treepots, deepots or supercells (shown to the left) to develop an optimum root-to-shoot ratio (see example photo, above right). This approach provides plants with a well established root system prior to outplanting at the revegetation site.

Emergent Transplant Installation

Plants such as rushes, sedges and tules are commonly called emergent plants, because they are often associated with creeks, wetlands and lakes, where they emerge from the water. They may reproduce from seed or from the spreading of underground rhizomes. This vegetative form of reproduction makes emergent species ideal candidates for transplantation into revegetation sites. These species are widely adapted to a range of environments, including high velocity bankfull channels, slow moving backwaters, seeps on hillslopes, and stable, relatively dry floodplains. It is important to identify the species to use and transplant them in an appropriate location. There are also some non-native species of emergents that should not be transplanted into riparian zones. Care should be taken to sensitively harvest these plants so the existing population is not seriously degraded. It is a good idea to take several small clumps from a variety of larger clumps, leaving the majority of each population intact to ensure genetic diversity.

Collecting emergent vegetation

Emergent vegetation, rhizomes exposed

Steps required to transplant emergent species:

- In the winter or early spring, carefully harvest rhizomes and the above-ground portions of the plant with a mattox, sharp trowel or shovel. Make sure one to several intact rhizomes remain for each transplant.
- Store the collected plant in a cool moist location until time for transplanting. Ideally, plants should be stored in moist soil, and should be transplanted as soon as feasible after collection.
- Dig a hole for the transplant that is large enough to accommodate the extended rhizome without bending or breaking it. Place dirt around the rhizome, pack it down, and water it in thoroughly to close any air holes around the rhizome.
- Trim back the above ground portions of the plant in order to stimulate rhizome growth.

Installation of emergent vegetation

Dormant Willow or Cottonwood Sprig Installation

Willows and cottonwoods are in the willow family (*Salicaceae*) and are generally adapted to bankfull channel environments. Species in this family form specialized roots along their stems, allowing for vegetative reproduction in riparian corridors. This feature makes them good candidates for installation as sprigs or dormant cuttings. In general, willows need significant amounts of light and a year-round source of moisture. They are good candidates for revegetation as long as their root zone remains moist during the summer. Because of their ability to withstand flood flows, they are often a good choice for bank stabilization projects in bankfull channel areas. There are many varieties of willow and cottonwood in California. Some (such as the curly willow and Lombardy poplar) are not native and should never be planted in riparian areas. They may not supply the same habitat values as the native plants, and may hybridize with them. Cuttings should be harvested from a variety of parent plants in order to avoid out-planting genetically identical material. These techniques result in a more successful project, will ensure genetic diversity, and do the least damage to the collection site.

Sharp, clean loppers produce high quality sprigs and cuttings

Typical dimensions for willow and cottonwood sprigs

Steps required to install dormant willow and cottonwood cuttings:

- Harvest cuttings during the winter months when plants are dormant (usually December-January). Although willows and cottonwoods will grow from cuttings at other times of the year, dormant cuttings are more resistant to disease, have higher survival rates, and do not require irrigation if planted in the appropriate location. Sprigs may be harvested using sharp, clean loppers, hand shears, or a chainsaw. The cuttings

Store cuttings in a moist environment

may be collected at a range of sizes (i.e., ½ inch to 4 inches diameter and up to 8 feet long). It is important to select material that has not become too woody, and that has several viable buds along the stem.

- Cuttings may be used immediately, stored on-site in the stream, or stored off-site in a bucket of cool water. Ideally, material should be harvested and installed the same day.

- Sprigs should be installed with buds pointing up, with approximately ¾ of the cutting in the soil, and ¼ exposed. Holes may be dug with a pick, with a piece of rebar, with an auger, or a backhoe (for large material). In areas with soft soil, you may avoid digging a hole by cutting the bottom at an angle and pounding it into the ground with a small sledge hammer. If the top is damaged by the hammer, cut off the top of the sprig to allow for clean healing or place a driving shield over the top to drive in the sprig.

Auger used for planting holes

Small sledge hammer for installing sprig

Clean, sharp loppers cut off damaged top of sprig

Container Plant Installation with Shelters
Container plants need to be ordered or propagated months in advance and may be grown by a native plants nursery or an individual practitioner (see page XI-16). Although the installation of container plant material requires more up-front planning than sprigging, emergent transplants and direct seeding, it also allows for the installation of a more diverse plant palette. Some projects use a two-phased approach, with cuttings, emergents and direct seeded species installed the first year, followed by installation of container plants the second year.

Steps required for installing container plants with shelters:

- Plants should be installed during the winter. Plants that will not be irrigated should be planted from December through February, after rains have thoroughly saturated the ground. Plants that will be drip irrigated can be installed at other times during the year. Because of the dangers of planting on the bank of a stream during high flow periods, when stream banks are slippery and the current swift, it may be best to delay some projects until conditions are safe.

- When installing plants, dig holes to twice the depth of the root-ball of the plant to be installed, crumbling any large soil clumps. Partially refill the hole, firmly tamping the soil to create a firm base for the new plant. Place the plant so the top of the root-ball is slightly above finish grade, to allow for future settling. Fill the hole and tamp firmly to remove any air pockets. Irrigate immediately, ensuring the water soaks deeply, unless the ground is already saturated.

Remove weeds from the planting area

Dig the planting hole twice the depth of the root ball

Water the plant immediately, ensuring that the water soaks deeply. If planting in low moisture conditions, plants should be watered during the planting process and therafter until rains begin.

- Where damage from domestic animals and wildlife is a concern, consider protecting plants with shelters (except those that will be in flood-scoured areas). Shelters should be firmly staked and tied so they will remain upright. There are a variety of shelters available, ranging from chicken wire enclosures (screen and collar, shown in photo at bottom) to plastic tubes (a.k.a., *supertubes*, shown in photo at right). All of these methods have proven successful, if they are maintained and weeds are controlled. Shelters should be removed as soon as the plants begin to outgrow them (3-5 years is typical for riparian plants).

- Weeds should be carefully controlled in revegetation areas before and after installation. Plants can become lost in the weeds, increasing maintenance costs and reducing project success. Mow tall weeds before installation, and consider using weed mats (3-foot-diameter sheets of specially designed woven or perforated plastic) around each new plant.

Installation of supertube on newly planted native seedling

Installation of weed mat

Installation of screen and collar protective hardware

Direct Seed Installation

Several riparian species are good candidates for direct seeding. These include large seeded species such as buckeye, native California black walnut, California bay laurel and the native oaks. Large seeds provide these species with a reserve of nutrients that can sustain them during the early phases of seedling development. Although some other seed producing species can be direct seeded under ideal conditions (including weed free environments with good soil moisture), it is generally not a successful technique. Additionally, many seeds are adapted to very specific conditions prior to germination, and may require treatment such as cold stratification or seed coat scarification. In order to ensure genetic diversity and maximize project success, seeds should be collected from several source plants.

Buckeye seed with developing root

Steps required for direct seeding:

- Collect the buckeye, bay, walnut or oak seeds when ripe (fall or winter, depending on the species). Ideally, seeds should be collected from the trees, rather than the ground in order to reduce damage from insects and bacteria. Seeds should come off easily. Check each seed for large numbers of insect holes or mechanical damage, and discard those that appear diseased or feel lighter than the others.

- Store seeds in a cool place until ready for out-planting. If seeds will be stored for more than a few days, they should be placed in plastic bags with perlite and refrigerated.

- Plant seeds in the winter, when soil moisture has reached a depth of 10 inches or more. Dig a shallow hole at each planting location, and cover seeds with one to two inches of soil. If seeds have begun to germinate, care should be taken to protect the tender new root. For buckeye, only one seed should be required, whereas for the other species you will want to install three to five seeds per planting spot. Once they have germinated, you can select the strongest seedling and clip the others with shears.

- If you choose to protect seedlings from deer browse, the techniques described on the following pages may be used.

Careful placement of buckeye seed

Cover seed with 1-2 inches of soil

Project Maintenance

Maintenance of native plant revegetation projects is critical to project success, and often requires an equal or greater expenditure of labor and resources than the installation phase. Maintenance usually includes weeding, watering and general monitoring.

Important maintenance tasks include:

- Regular hand weeding around individual plants during the height of growing season in spring and early summer, as well as one final weeding in the fall. In some cases, where tall weedy species like mustard, hemlock or fennel are present, the whole site may require mowing or mechanical weeding in order to ensure site access and reduce excess shading.

- Soil moisture should be checked on a regular basis during the first two to three growing seasons and plants evaluated for drought stress. The watering regime (whether hand irrigation or a drip system) should be scheduled according to plant needs, rather than an arbitrary schedule. Irrigation should include the minimum amount necessary to keep the plants healthy so they do not become dependent upon additional water. If the plants are appropriate to the location, and installed correctly at the right time of year, they should not require irrigation past year three. Watering should taper off as the plants mature.

- General monitoring should take place at each maintenance visit. Each plant should be checked for signs of disease, rodent or insect browse, and drought stress. Damaged plants should be replaced when possible. Encroachment by invasive species should also be monitored, and these species controlled before they take over the revegetation site.

Mechanical weeding of project site

Hand watering of individual plant

REGULATORY AGENCIES AND REQUIREMENTS

(excerpted from The Pierce's Disease/Riparian Habitat Workgroup, 2000
Riparian Vegetation Management for Pierce's Disease in North Coast California Vineyards)

Several federal, state, and local agencies have regulatory authority over work done in the riparian corridor and may need to be contacted for a revegetation project. It is the landowner's responsibility to be familiar with these agencies and notify them when a project is planned.

Different agencies may have jurisdiction over a project, depending on the character or extent of the project. Most revegetation projects will involve only the removal of specific non-native plants, and replanting of native plants. Such simple revegetation projects will require the least regulatory agency input. The one agency that will certainly require notification, even for a simple revegetation project, is the California Department of Fish and Game. In addition, the Regional Water Quality Control Board may need notification if the project would result in soil erosion, and/or runoff of pesticides into the stream (due to removal of a vegetative buffer).

Some revegetation projects may have a streambank stabilization component. If the stabilization involves re-contouring of the streambed and banks, the United States Army Corps of Engineers and NOAA Fisheries may need notification, in addition to the two agencies mentioned above. Streambank stabilization projects that use bio-technical approaches, such as live vegetation baffles and revetments, will have fewer negative impacts to natural resources and may need less regulatory agency involvement than projects with standard engineering and riprap. The use of standard engineering and riprap is generally discouraged in areas that contain threatened and endangered species, such as salmon and steelhead, because of the negative effects on habitat.

Formal agency notification typically involves completing a form that describes the project, often with a project design map and written description, and paying a fee. Talking to agency representatives about the project before this formal notification can save a significant amount of time. Most agencies encourage informal consultation in the early stages of project planning. The concerns of each party can be addressed, and potential roadblocks eliminated or reduced. In some cases, one agency may pass your project on for review by other agencies, but do not assume this will happen. The landowner and project manager is always responsible for informing all agencies. Many of these agencies charge fees to process the applications and permits. Call each agency for information and a current fee schedule.

Riparian revegetation project, Russian River watershed

Become familiar with the regulatory agencies described below. Even better, get to know the agency staff that work in your area and find out what their interests are, before designing your project (refer to Part VI, Project Planning and Organization).

Table XI-1. Native Plants for Revegetation: Planting Location, Container Type and Spacing

The following plants are common in central and north coast watersheds and are recommended for use in riparian revegetation projects. Before choosing plants for a revegetation project, survey your area to determine the appropriate species, or consult with a native plant specialist. This table provides information about the typical location of riparian species, the revegetation approach (e.g., container, direct seed, dormant sprig or transplant) and general spacing suggestions.

COMMON NAME	LATIN NAME	PLANTING LOCATION	REVEGETATION APPROACH	SPACING feet-on-center	PAGE
BROADLEAF TREES					
Big Leaf Maple	*Acer macrophyllum*	floodplain	container	8 – 10’	A-1
Black Cottonwood	*Populus balsamifera* ssp. *trichocarpa*	channel	container, sprig	8 – 10’ 2 – 6’	A-2
Box Elder	*Acer negundo* var. *californicum*	floodplain	container	8 – 10’	A-3
California Bay Laurel	*Umbellularia californica*	floodplain	container	8 – 10’	A-4
California Buckeye	*Aesculus californica*	floodplain	container, direct seed	8 – 10’	A-5
Coast Live Oak	*Quercus agrifolia*	floodplain	container, direct seed	8 – 10’	A-6
Fremont Cottonwood	*Populus fremontii* ssp. *fremontii*	floodplain, channel	container, sprig	8 – 10’ 2 – 6’	A-7
Mountain Dogwood	*Cornus nuttallii*	channel	container	8 – 10’	A-8
No. CA Black Walnut	*Juglans californica* var. *hindsii*	floodplain	container	8 – 10’	A-9
Oregon Ash	*Fraxinus latifolia*	floodplain, channel	container	8 – 10’	A-10
Oregon Oak	*Quercus garryana* var. *garryana*	floodplain	container, direct seed	8 – 10’	A-11
Red Alder	*Alnus rubra*	floodplain, channel	container	8 – 10’	A-12
Sycamore	*Platanus racemosa*	floodplain	container	8 – 10’	A-13
Valley Oak	*Quercus lobata*	floodplain	container, direct seed	8 – 10’	A-14
Water Birch	*Betula occidentalis*	channel	container	8 – 10’	A-15
White Alder	*Alnus rhombifolia*	channel	container	8 – 10’	A-16
Willow	*Salix* spp.	channel, floodplain	container, sprig	8 – 10’ 2 – 6’	A-17
CONIFEROUS TREES					
California Nutmeg	*Torreya californica*	floodplain	container	8 – 10’	A-18
Coast Redwood	*Sequoia sempervirens*	floodplain	container	8 – 10’	A-19
Douglas Fir	*Pseudotsuga menzieii*	floodplain	container	8 – 10’	A-20
Pacific Yew	*Taxus brevifolia*	floodplain	container	8 – 10’	A-21
Western Hemlock	*Tsuga heterophylla*	floodplain	container	8 – 10’	A-22
SHRUBS AND SMALL TREES					
Blue Elderberry	*Sambucus mexicana*	floodplain	container	8 – 10’	A-23
California Blackberry	*Rubus ursinus*	floodplain	container	4 – 6’	A-24
California Hazelnut	*Corylus cornuta* var. *californica*	floodplain	container	4 – 6’	A-25
California Wild Rose	*Rosa californica*	floodplain	container	4 – 6’	A-26
Cascara	*Rhamnus purshiana*	floodplain	container	4 – 6’	A-27
Coffeeberry	*Rhamnus californica*	floodplain	container	4 – 6’	A-28

COMMON NAME	LATIN NAME	PLANTING LOCATION	REVEGETATION APPROACH	SPACING feet-on-center	PAGE
SHRUBS AND SMALL TREES					
Coltsfoot	*Petasites frigidus*	floodplain	container	4 – 6’	A-29

GLOSSARY

Achene: Dry, one-seeded fruit that often looks like a seed. Produced in a one-chambered ovary. Does not open to release the seed.

Allelopathic: Plant produces and releases a toxic substance that results in suppressed growth in other plant species.

Alternate: Describes growth pattern in which new structures develop singularly along axis. For leaves, only one leaf is produced per node so leaves appear to have "alternated" the side of the stem from which they grew (see opposite).

Annual: Plant completes entire life cycle, from germination to seed production and death, in one year or growing cycle (see biannual, perennial).

Asexual: Reproduction by a single individual using a process that is not sexual and does not involve the union of individual cells and the reassortment of genetic characteristics.

Biennial: Plant completes entire life cycle, from germination to seed production and death, in two years or growing cycles. Usually flowers are produced only during the second cycle (see annual, perennial).

Bisexual: Flowers have both female and male fertile reproductive structures (see unisexual, dioecious, monoecious).

Bract: A leaf-like or scale-like structure associated with and usually directly under a flower or cone.

Capsule: Dry, pod-like fruit with fused or partially fused chambers. When ripe, the fruit splits to release multiple seeds.

Catkin: An unbranched inflorescence of closely attached flowers. Flower petals and sepals are inconspicuous or absent but bracts can be showy. Flowers are all the same sex on each catkin.

Compound: Composed of two or more parts or repeating a structural pattern.

Deciduous: Leaves fall off naturally at the end of each growing season and re-grow after a period of leaf-less dormancy (see evergreen).

Dioecious: Male and female flowers produced on separate plants. Each plant produces either male or female unisexual flowers (see monoecious and bisexual).

Elliptic (al): Shaped like a flattened circle, widest at center and tapering almost equally at both ends.

Evergreen: Leaves remain green and on the plant throughout the year, and do not shed en-mass at the end of the growing season (see deciduous).

Gall: An abnormal outgrowth in plant tissue caused by certain parasitic insects, fungi, bacteria, or mechanical injury.

Inflorescence: A cluster of flowers and associated structures such as bracts, petioles and stems (does not include full sized foliage leaves).

Lanceolate: Lance shaped, width widest along lower half and tapers to a point at the tip.

Monoecious: Plant produces both male and female unisexual flowers (see dioecious and bisexual).

Oblong: Longer than wide, with almost parallel sides and rounded corners at each end.

Opposite: Describes a growth pattern in which new structures develop directly across from one another. In leaves, two leaves will grow per node on opposite sides of the stem (see alternate).

Ovate: Egg shaped, widest below middle, tip round or pointed.

Palmate: Radiating from a common point, similar to fingers from the palm of a hand.

Perennial: Plants live more than two years or growing cycles. For this text, description applies to plants that are non-woody above ground and also describes species that lose all above ground structures during dormancy and re-grow from roots (see annual, biannual).

Petiole: Slender stem that supports the leaf, i.e. the leaf stalk.

Pistil: Female reproductive structure of the flower. At the base is the ovary with one or more ascending stalk-like structures (styles) supporting the pollen receiving structure, the stigma (see stamen).

Sepal: Outer most structure of the flower. Similar to petals but usually green.

Stamen: Male reproductive structure of the flower. A stalk like structure (filament) with a pollen-producing anther at the tip (see pistil).

Stigma: Pollen receiving structure of the pistil. Usually located near the flower center, elevated above the ovary. The stigma is often sticky or hairy and sometimes lobed.

Terminal: At the end or tip of a structure.

Unisexual: Flowers that have either male or female fertile reproductive structures but not both (see bisexual, dioecious, monoecious).

APPENDIX XI-A

CENTRAL AND NORTH COAST NATIVE RIPARIAN PLANTS

BIG LEAF MAPLE

Species Name: *Acer macrophyllum*
Family: Aceraceae (maple family)
Plant Type: Broad-leaf tree

Description: Tree, height to 90 feet, with a broad, rounded shape, deciduous with leaves turning yellow in the autumn.

Leaf: Palmate, opposite, width to 10 inches, with 3-5 deeply cut, irregularly toothed lobes, surface shiny green but paler underneath.

Flower: April-May, bisexual, also separate sexes: develop in long, drooping clusters of petaled, fragrant, greenish-yellow small flowers. Flowers appear after leaves.

Fruit/Seed: Distinctive paired achenes with wings, wings spreading <90°.

Typical Location: Floodplain, streamside, moist shady areas, riparian zone as well as hillsides outside the riparian zone, common; elevations below 5,000 feet.

Revegetation Approach: Container

Key Notes: Related to the box elder (*A. negundo*) and vine maple (*A. circinatum*). Easily distinguished by leaf shape.

Notes: Trees provide shade, shelter and roosting areas. Seedlings, leaves, buds, flowers and seeds provide forage for a range of mammals and birds.

leaf

whole plant

flower

seed

BLACK COTTONWOOD

Species Name: *Populus balsamifera* ssp. *trichocarpa*
Family: Salicaceae (willow family)
Plant Type: Broad-leaf tree

Description: Tree, height to 120 feet, branches wide spreading, forming massive crowns, deciduous.

Leaf: Ovate, base round and tip tapered to point, length to 4 inches, dark green above, silvery or rust colored below, margin finely scalloped.

Flower: February-April, dioecious (separate sex trees): male catkin length 1-5 inches; female catkin length 3 inches in flower, 10 inches at fruit.

Fruit/Seed: Capsule containing many tiny seeds with conspicuous white cottony tufts.

Typical Location: Alluvial bottomlands, floodplains, streamside; elevations below 9,000 feet.

Revegetation Approach: Container or cuttings. Care in correctly identifying species, see Key Notes.

Key Notes: Related to the native Fremont cottonwood, *P. fremontii*. Leaf shape differentiates between species. Also related to the non-native, cultivated Lombardy poplar, *P. nigra* (not shown). Care must be taken to correctly identify.

Notes: Important feature of mature riparian forest, provides habitat for osprey, herons and egrets, stream shading and leaf litter valuable for aquatic insects. Heavy limbed, brittle species. Tallest of the *Populus* species. Susceptible to galls.

leaf

whole plant

flower

seed

BOX ELDER

Species Name: *Acer negundo*
Family: Aceraceae (maple family)
Plant Type: Broad-leaf tree

Description: Tree, height to 65 feet, deciduous with bright autumn color.

Leaf: Compound leaf composed of 3-5 leaflets. Leaflet coarsely toothed, 3-5 lobed, length to 5 inches with the terminal leaflet longest.

Flower: March-April, dioecious (separate sex trees): female develops small, non-petaled greenish flowers on drooping stalks; male has clusters of small non-petaled flowers.

Fruit/Seed: Distinctive paired achenes with wings, achene initially reddish but ripens to a straw color in the autumn. Produces a substantial quantity of seed, which germinate in great numbers in open areas.

Typical Location: Common canopy species, streamsides, established floodplains, bottomlands; elevations below 6,000 feet.

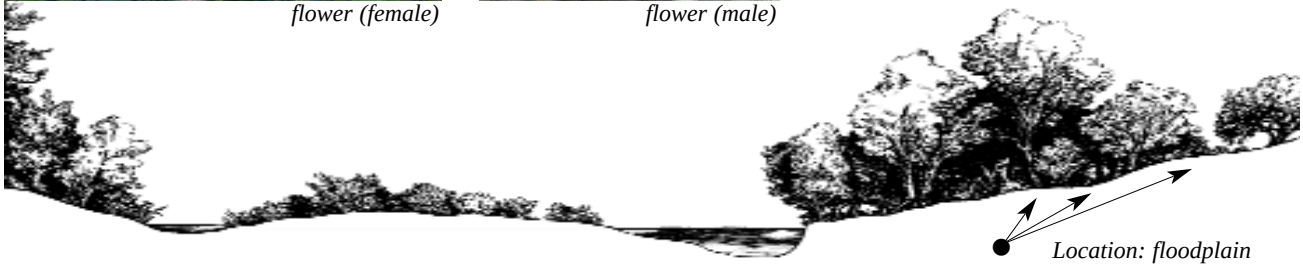
Revegetation Approach: Container

Key Notes: Related to the vine maple (*A. circinatum*) and the big leaf maple (*A. macrophyllum*). Easily distinguished by leaf shape. *A. negundo* is the only compound leaf maple in North America.

Notes: Provides excellent shelter for wildlife. Seeds provide good forage for birds and small mammals.

leaf

whole plant



flower (female)

flower (male)

seed

CALIFORNIA BAY LAUREL

Species Name: *Umbellularia californica*
Family: Lauraceae (laurel family)
Plant Type: Broad-leaf tree

Description: Tree, broad, round topped with height over 90 feet; also a shrub, especially on coastal bluffs, or in dry or poorly drained soils, evergreen.

Leaf: Oblong, length to 4 inches, alternate, highly aromatic when crushed.

Flower: December-May, bisexual, clusters of 6-10 small, greenish-yellow flowers, flowers petal-less, with 6 petal-like sepals, sepal length 1/8 inch.

Fruit/Seed: Round-oval stone fruit, greenish but ripening to dark purple, olive-like appearance, length to 1 inch, ripens in late autumn or winter.

Typical Location: Floodplains, mixed evergreen forests and upland habitat; elevations below 5,200 feet.

Revegetation Approach: Container, direct seed. Gather seed in October-December, remove thin fleshy coat and plant immediately.

Key Notes: Fragrance from crushed leaves is a notable characteristic.

Notes: Provides shade, shelter, roosting and nesting sites. Seeds provide forage for small mammals and birds. Source of large woody debris.

leaf

whole plant

flower

seed

CALIFORNIA BUCKEYE

Species Name: *Aesculus californica*
Family: Hippocastanaceae (buckeye family)
Plant Type: Broad-leaf tree

Description: Tree, height 15-40 feet, deciduous with leaves falling by late summer as a strategy against drought, new leaf growth begins in February.

Leaf: Compound, palmate leaf, generally with 5 leaflets, leaflet finely toothed, length 2-7 inches.

Flower: May-June: Spike-like cluster, length 6-8 inches, with small white to pinkish, sweet smelling flowers (length ½ inch). Pollen and nectar are toxic to honeybees.

Fruit/Seed: Large, pear shaped, grayish-brown, and leathery. Usually a single fruit is born at tip of flower spike and remains on tree after leaf fall. Fruit splits to reveal a large brown seed (said to look like a buck's eye). Seed round, large, diameter 1-2 inches, glossy brown, ripens in September.

Typical Location: Established floodplain forests, borders of streams, canyons, dry slopes; elevations below 5,600 feet.

Revegetation Approach: Container and direct seeding. Seeds easy to grow but toxic. Tolerant of urban pollution and salt spray.

Notes: All plant parts toxic, but seeds provide wildlife with some forage. Roots are good for binding soil. Native Americans used ground seeds to stun fish.

leaf

whole plant

flower

seed

seed

COAST LIVE OAK

Species Name: *Quercus agrifolia*
Family: Fagaceae (oak family)
Plant Type: Broad-leaf tree

Description: Tree, wide top, height 35-80 feet, large branches that often touch the ground, evergreen with leaves falling year round.

Leaf: Ovate, leathery, waxy, strongly convex, with small brownish hairs at the intersections of the primary leaf veins on the leaf underside, length to 3 inches, margin wavy, irregular, often spined.

Flower: Female flower tiny, singular or small clusters on new growth; male flower catkin, long, threadlike strand containing 25 - 100 male flowers, located on older growth.

Fruit/Seed: Acorn: slender, pointy tip, length to 1½ inches, wooly interior, ripens in autumn after 6-8 months growth. Cap large with thin, flat scales.

Typical Location: Established floodplain, valleys, mixed-evergreen forest, woodland; elevations below 5,000 feet.

Revegetation Approach: Container, direct seed. Hybridizes with *Q. kelloggii*, *Q. parvula*, *Q. wislizenii*.

Key Notes: Leaf and acorn morphology help distinguish from valley oak (*Q. lobata*) and Oregon oak (*Q. garryana*).

Notes: Trees provide shade as well as roosts and nesting sites for cavity nesting birds and bats. Acorns are an important food source for many wildlife species, especially woodpeckers and squirrels. Native Americans utilized acorns as a staple food crop. Wood made excellent charcoal and was massively harvested by European pioneers. Long-lived, commonly exceeding 250 years.

leaf

whole plant

seed

flower

FREMONT COTTONWOOD

Species Name: *Populus fremontii* ssp. *fremontii*
Family: Salicaceae (willow family)
Plant Type: Broad-leaf tree

Description: Tree, height to 90 feet, branches wide spreading, forming massive crowns, deciduous with leaves turning yellow in autumn but remaining on tree into late winter.

Leaf: Triangular, wider than long (length to 4 inches), abruptly narrowing to a point at apex, same color top and bottom, margin coarsely scalloped.

Flower: March-April, dioecious (separate sex trees), male and female: catkin, 1½-3 inches long, containing small greenish-yellow flowers that appear before leaves.

Fruit/Seed: Capsule containing many tiny seeds with conspicuous white cottony tufts. Seed ripen in early summer.

Typical Location: Alluvial bottomlands, stream channels, floodplains, wet areas; elevations below 6,500 feet.

Revegetation Approach: Container or cuttings. Care in correctly identifying species, see Key Notes.

Key Notes: Related to the native black cottonwood, *P. balsamifera*. Leaf shape differentiates between species. Also related to the non-native, cultivated Lombardy poplar, *P. nigra* (not shown). Care must be taken to correctly identify.

Notes: Important feature of mature riparian forests and provides habitat for osprey, herons and egrets. When young, found in large numbers on open gravel bars. Susceptible to mistletoe. Source of large woody debris.

leaf

whole plant

flower

seed

Location: floodplain, channel

MOUNTAIN DOGWOOD
PACIFIC DOGWOOD
WESTERN DOGWOOD

Species Name: *Cornus nuttallii*
Family: Cornaceae (dogwood family)
Plant Type: Broad-leaf tree

Description: Tree, one or more trunks, height to 80 feet, deciduous with yellow, pink and red autumn color.

Leaf: Elliptical, tapered at both ends, opposite, length 2½-5½ inches, leaf veins follow smooth leaf edges towards apex in curved pattern.

Flower: April-July, appearing before leaves, with second flowering in September, bisexual, petal-like bracts large (length 2 inches), showy, white to pinkish, surround cluster of small greenish flowers.

Fruit/Seed: April-July, autumn, clusters of crowded berries, berries elliptical in outline, ½ inch long, shiny bright red to orange-red, seed smooth.

Typical Location: Forests; elevations below 6,600 feet.

Revegetation Approach: Container.

Notes: Streambank stabilizer. Berries provide forage for small mammals and birds, especially band-tail pigeons. Native Americans used long slender branches to make baby baskets.

leaf

whole plant

flower

seed

Location: channel

NORTHERN CALIFORNIA BLACK WALNUT

Species Name: *Juglans californica* var. *hindsii*
Family: Juglandaceae (walnut family)
Plant Type: Broad-leaf tree

Description: Tree, height 50 to 80 feet, single trunk with broad crown, deciduous.

Leaf: Compound, alternate, with 11-19 leaflets. Leaflet lanceolate to ovate, pointed at tip, length 2-4 inches, margin toothed.

Flower: April-May, monoecious (separate sexes on same tree), female flowers small, petal-less, erect, born in clusters at tip of new growth; male catkin droops, length to 4 inches, grows on old growth.

Fruit/Seed: Round, smooth-shelled nut covered in a fibrous, fleshy black husk, ripens in autumn.

Typical Location: Floodplain, woodlands, valleys; elevations 160-2,000 feet.

Revegetation Approach: Container, direct seed. Hybridizes with the non-native English walnut making precise identification difficult. Care should be taken in collecting from a genetically pure source.

Key Notes: Young plants sometimes confused with the invasive non-native, tree of heaven (*Ailanthus altissima*). Seeds, flowers or careful inspection of leaf characteristics distinguish between species.

Notes: Provides forage, roosting and nesting sites (cavities) for wildlife. Nuts are forage for squirrels and rodents, as well as birds. Used as a rootstock for cultivated English walnut. Drought tolerant and oak-root fungus resistant.

leaf

whole plant

flower

seed

OREGON ASH

Species Name: *Fraxinus latifolia*
Family: Oleaceae (olive family)
Plant Type: Broad-leaf tree

Description: Tree, height to 80 feet, deep-rooted, deciduous.

Leaf: Compound, opposite, length to 12 inches, with 5-7 leaflets. Leaflet oblong to oval, broadest toward tip, tip abruptly pointed, length to 4 inches.

Flower: March-May, dioecious (separate sex trees): female and male flowers tiny, inconspicuous, petal-less, appearing in clusters with or before leaves.

Fruit/Seed: Winged achene, length to 1¾ inches, grows in clusters on female trees, matures in summer.

Typical Location: Floodplain, streambanks, woodlands; elevations below 5,600 feet.

Revegetation Approach: Container.

Notes: Functions as overstory or understory species in late successional areas. Tolerates standing water during winter.

leaf

whole plant

flower (female)

flower (male)

seed

Location: floodplain, channel

OREGON OAK

Species Name: *Quercus garryana*
Family: Fagaceae (oak family)
Plant Type: Broad-leaf tree

Description: Tree, wide top, height to 65 feet, deciduous with reddish-brown autumn color.

Leaf: Length 2-6 inches, surface dark green, leathery, shiny, underside pale green to rusty with downy hair, margin with 5-7 deep, rounded lobes.

Flower: Female flower tiny, singular or small clusters on new growth; male flower catkin, long, threadlike strand containing 25-100 male flowers, located on older growth.

Fruit/Seed: Acorn: oval to spherical, rounded tip, length to 1 inch, smooth interior, ripens in autumn after 1-year growth (but abundant crop irregular, every 2-5 years). Cap small, shallow, cup-like with smooth to slightly bumpy scales.

Typical Location: Established floodplain, valleys; elevations 1,000 to 5,900 feet.

Revegetation Approach: Container, direct seed. May hybridize with other oak species.

Key Notes: Leaf and acorn morphology helps distinguish from valley oak (*Q. lobata*) and live oak (*Q. agrifolia*).

Notes: Trees provide roosts and nesting sites for cavity nesting birds and bats. Acorns are an important food source for many wildlife species, especially woodpeckers and squirrels. Native Americans utilized acorns as a food crop, but less favored than live oak. Trees harvested for lumber.

leaf

whole plant

flower and leaf

RED ALDER

Species Name: *Alnus rubra*
Family: Betulaceae (birch family)
Plant Type: Broad-leaf tree

Description: Tree, single whitish trunk, height to 80 feet, branches slim and drooping forming a narrow crown, deciduous.

Leaf: Elliptical to oval, length 2-6 inches, leaf midrib and major veins indented, surface gray-green, underside rust colored. Margins coarsely toothed and rolled under (look carefully).

Flower: March-April, monoecious (separate sexes on same tree), female catkin erect, length to ¾ inch, develops before leaves; male catkin long (3-7 inches), yellowish-green, develops before leaves, produces large quantities of pollen in February.

Fruit/Seed: Woody, cone-like catkin. Sheds seeds in autumn but cone can remain throughout winter.

Typical Location: Active channel, floodplain, wet areas; elevations sea level to 3,300 feet.

Revegetation Approach: Container.

Key Notes: Distinguish from white alder, *A. rhombifolia*, by carefully looking at leaf margins and vein structure. Only found near the coast and at lower elevations.

Notes: Important habitat for fish and aquatic insects by shading streams, providing shelter beneath undercut roots and providing a source of large woody debris. Seeds provide excellent forage for birds. Root nodules contain atmospheric nitrogen-fixing bacteria, actinomycetes. Leaf fall enriches the surrounding soils with nitrogen. Stabilizes soil. Tolerant of saline water.

leaf

whole plant

seed and leaf

flower

Location: floodplain, channel

SYCAMORE

Species Name: *Platanus racemosa*
Family: Platanaceae (sycamore family)
Plant Type: Broad-leaf tree

Description: Tree, height 115 feet, single base trunk, may form secondary trunk that leans and twists, bark peals in reddish-brown plates exposing whitish areas. Branches widely spreading with lower branches twisting.

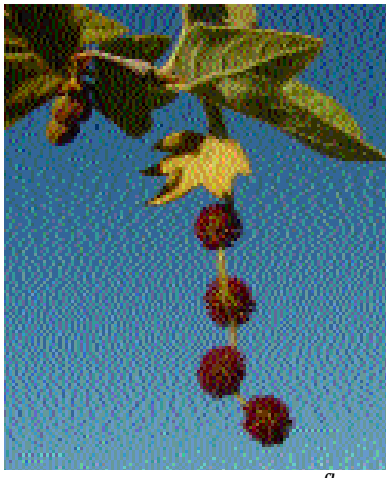
Leaf: Palmate with 3-5 deep lobes, length to 10 inches, margins smooth edged. Leaves turn brown in early autumn but may remain on tree until new leaf growth.

Flower: February-April, monoecious (separate sexes on same tree), female and male flowers in unisex spherical clusters, 3-7 clusters per stalk, individual flowers tiny.

Fruit/Seed: Spherical cluster (diameter 1 inch) of spiny achenes, ripen in winter.

Typical Location: Floodplain, streamsides, canyons; elevations below 6,600 feet.

Revegetation Approach: Container.



leaf

whole plant

trunk

flower

seed

VALLEY OAK

Species Name: *Quercus lobata*
Family: Fagaceae (oak family)
Plant Type: Broad-leaf tree

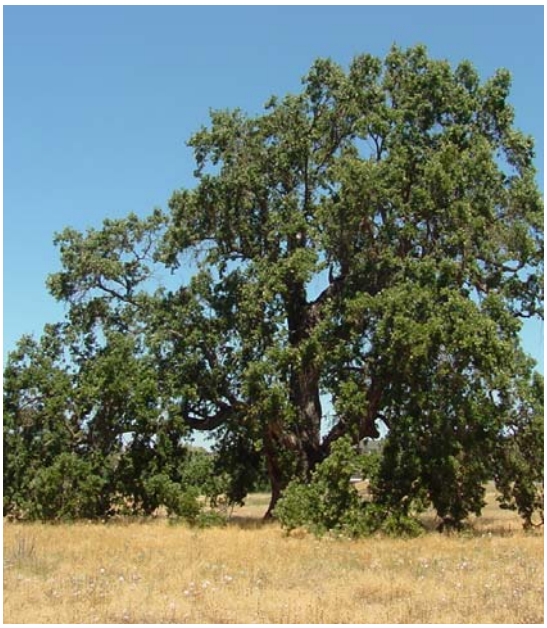
Description: Tree, wide top, height 50-115 feet (often as wide), may have massive branches sometimes extending to the ground, largest North American oak, deciduous.

Leaf: Length 2-4 inches, surface dark green, underside pale green with felt-like hairs, margin with 6-10 deep, rounded lobes.

Flower: March-April, female flower tiny, singular or small clusters on new growth; male flower catkin, long, threadlike strand containing 25 - 100 male flowers, located on older growth.

Fruit/Seed: Acorn: long, conical, length to 2 inches (largest of California oaks), smooth interior, ripens in autumn after 1-year growth, germinates immediately. Cap with wart-like bumps on scales.

Typical Location: Established floodplain, valleys; elevations below 5,600 feet.

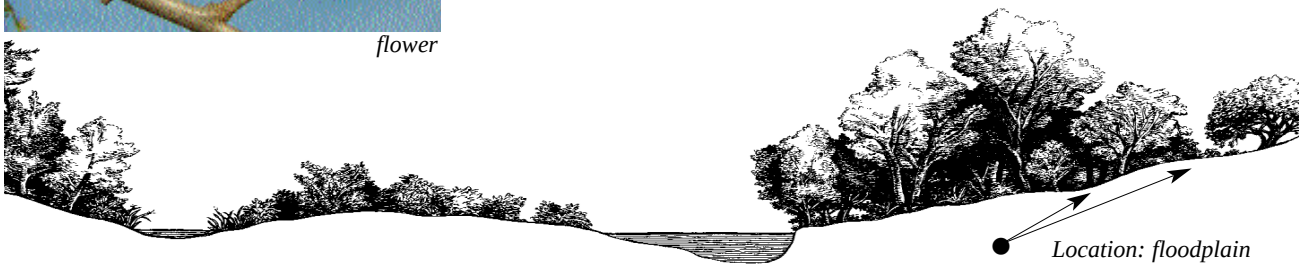


Revegetation Approach: Container, direct seed. Hybridizes with *Q. berberidifolia*, *Q. corneliusmulleri*, *Q. douglasii*, *Q. engelmannii*, *Q. garryana*, *Q. john-tuckeri*.

Key Notes: Leaf and acorn morphology help distinguish from live oak (*Q. agrifolia*) and Oregon oak (*Q. garryana*).

Notes: Trees provide roosts and nesting sites for cavity nesting birds and bats. Source of large woody debris. Acorns are an important food source for many wildlife species, especially woodpeckers and squirrels. Young branches may have dense clusters of spherical insect galls harboring small, native wasp larvae. Native Americans utilized acorns as a food crop. May live for 400- 600 years.

leaf



whole plant

seed

flower

WATER BIRCH

Species Name: *Betula occidentalis*
Family: Betulaceae (birch family)
Plant Type: Broad-leaf tree

Description: Tree or large shrub, usually with multiple trunks, height to 30 feet, bark smooth and dark brown/red, deciduous.

Leaf: Widely ovate, tip pointed, margins doubly toothed, length to 2 inches.

Flower: April-June, monoecious (separate sexes on same tree), female catkin erect, length ¾ to 2½ inches; male catkin elongate, length 1 to 2 inches.

Fruit/Seed: Many tiny, winged seeds inside catkin.

Typical Location: Streams, springs, moist areas; elevations 2,000 to 9,500 feet.

Revegetation Approach: Container.

Notes: Important wildlife forage and bank stabilizer.

leaf

whole plant

male catkin

seed

Location: channel

WHITE ALDER

Species Name: *Alnus rhombifolia*
Family: Betulaceae (birch family)
Plant Type: Broad-leaf tree

Description: Tree, single whitish trunk, height to 115 feet, branches slim and drooping forming a narrow crown, deciduous.

Leaf: Elliptical to oval, length 2-6 inches, leaf midrib and major veins not indented, surface gray-green, underside yellowish. Margins coarsely toothed and not rolled under (look carefully).

Flower: March-April, monoecious (separate sexes on same tree), female catkin erect, length to ¾ inch, develops before leaves; male catkin long (3-7 inches), yellow-greenish, develops before leaves, produces large quantities of pollen in February.

Fruit/Seed: Woody, cone-like catkin. Sheds seeds in autumn but cone remains throughout winter.

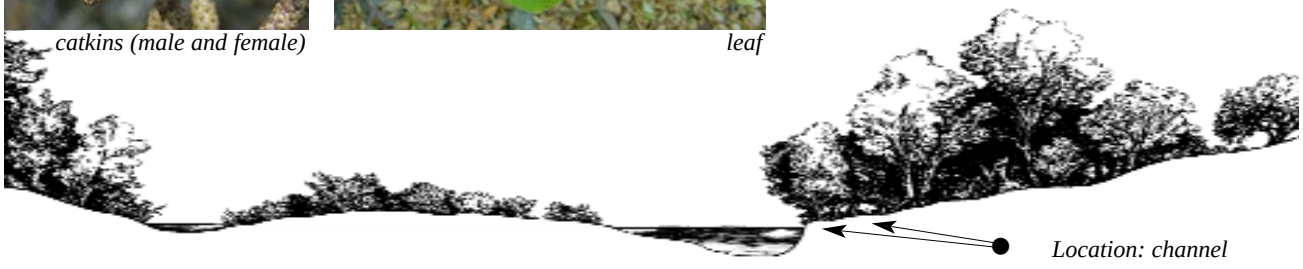
Typical Location: Active channel, floodplain, wet areas; elevations 300 to 8,000 feet.

Revegetation Approach: Container.

Key Notes: Distinguish from red alder, *A. rubra*, by carefully looking at leaf margins and vein structure.

Notes: Important habitat for fish and aquatic insects by shading streams, providing shelter beneath undercut roots and providing a source of large woody debris. Seed provide excellent forage for birds. Root nodules contain atmospheric nitrogen-fixing bacteria, actinomycetes. Leaf fall enriches the surrounding soils with nitrogen. Stabilizes soils.

whole plant



whole plant

catkins (male and female)

leaf

WILLOW

Species Name: *Salix* spp.
Family: Salicaceae (willow family)
Plant Type: Broad-leaf tree

Description: Tree or shrub, stems slender, flexible, most hairy, bark reddish or yellowish brown, height to 50 feet, some species spread by roots (developing clonal thickets), deciduous.

Leaf: Elliptical, slender or wide (almost ovate), length variable (2-6 inches), hairy, one central vein, margins smooth or toothed, tip pointed or rounded.

Flower: February-May, dioecious (separate sex trees), female and male catkins on leafy shoot, length 1- 4 inches, appear just before or with leaves.

Fruit/Seed: Dry, 2 part fruit, length 1/4-1/3 inch, contains many tiny seeds. Seeds disperse by wind and water.

Typical Location: Active channel, streamsides, marshes, wet ditches, springs; elevations below 9,000 feet.

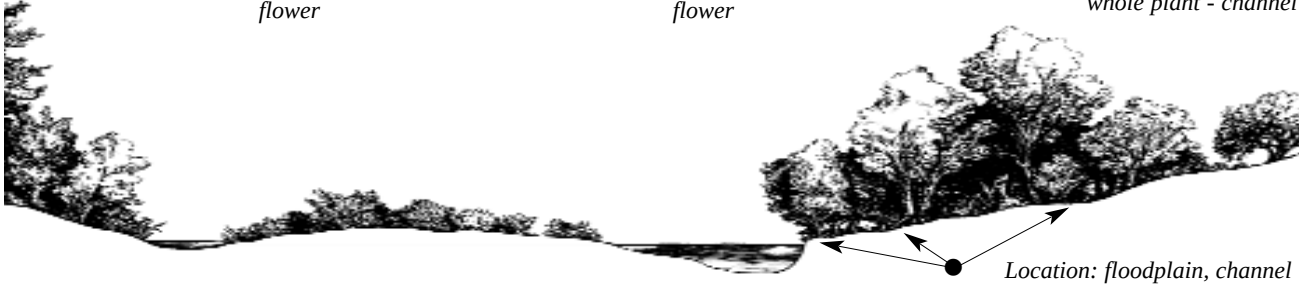
Revegetation Approach: Container or cutting.

Key Notes: Accurate identification requires an understanding of flower characteristics. Distinguish from mulefat (*Baccharis salicifolia*) by leaf vein pattern.

Notes: Excellent for streambank stabilization and habitat restoration. Dense growth provides excellent cover for aquatic organisms, terrestrial wildlife and birds. Native Americans used stems in basketry and bow making. Willows produce salicin, a chemical similar to acetylsalicylic acid (aspirin).

leaf

whole plant - floodplain



whole plant - channel

flower

flower

Location: floodplain, channel

CALIFORNIA NUTMEG

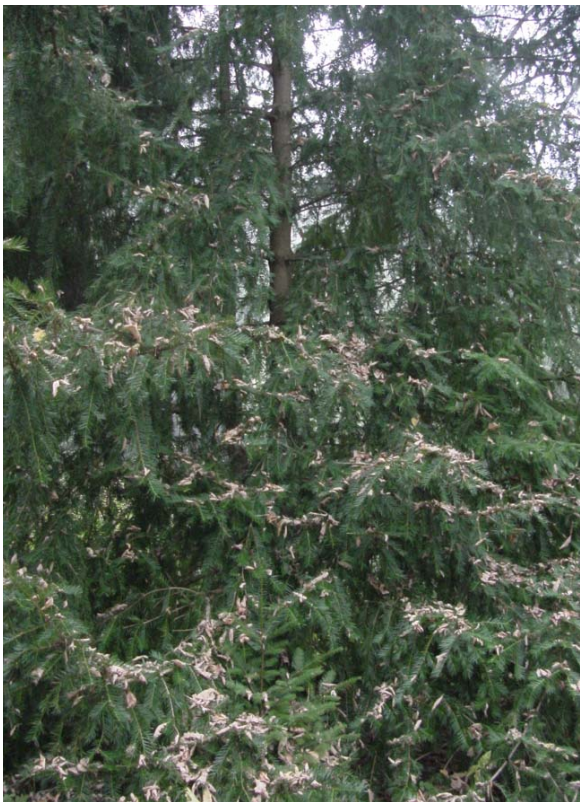
Species Name: *Torreya californica*
Family: Taxaceae (yew family)
Plant Type: Coniferous tree

Description: Conifer, pointed crown, rounding as it matures, widely spaced horizontal branches, height to 140 feet, aromatic leaves and fruit, evergreen.

Leaf: Needle, dark green, 2 white bands on underside, length 1-2¾ inches, rigid with slightly upturned tip, tip sharp, needles arranged in 2 almost parallel rows, aromatic.

Flower: Monoecious, female cone develops into olive shaped fruit, male cone a stalked cluster with 6-8 whirls.

Fruit/Seed: Olive-like fruit, oblong, pale green with purplish markings, longitudinally grooved, length to 2 inches, seed completely contained within fruit.



Typical Location: Shady canyons in forest, woodland and chaparral; elevations 100 to 6,900 feet.

Revegetation Approach: Container.

Notes: Trees provide shelter and habitat diversity in watersheds. Seeds are an important forage.

leaf

whole plant

seed

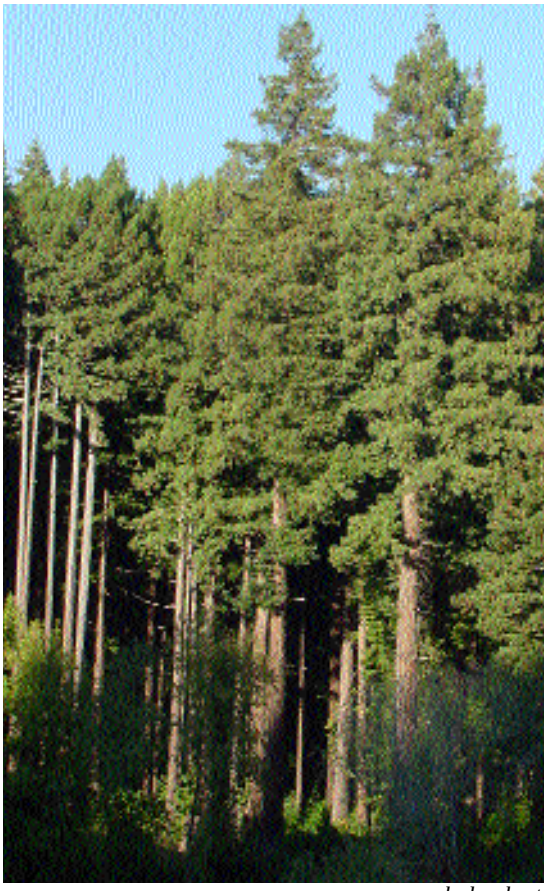
COAST REDWOOD

Species Name: *Sequoia sempervirens*
Family: Taxodiaceae (bald cypress family)
Plant Type: coniferous tree

Description: Tree, height to 350 feet, narrow crown, horizontal branches grow straight out from trunk and slightly upward at ends, mature trees generally free of branches in the lower half, red bark thick and fibrous, evergreen.

Leaf: Needle, length ½-¾ inch, branchlets with needles in 2 rows, arranged in one plane (feather-like).

Fruit/Seed: Spherical, reddish cone, length 1¼ inch, found mostly near the top of the tree, clustered at the end of branchlets, ripens in autumn.



Typical Location: Northern California coastal drainages south to Monterey; elevations sea level to 3,600 feet.

Revegetation Approach: Container.

Notes: Long-term source of woody debris in streams, cools streams by providing dense shade, undercut roots provide vital aquatic shelter. Tallest trees in North America. Generally re-sprouts from cut stems or trunk, and after fire. Mainstay of the California lumber industry from 19th century to the early 20th century.

DOUGLAS FIR

Species Name: *Pseudotsuga menziesii*
Family: Pinaceae (pine family)
Plant Type: coniferous tree

Description: Conifer, height to 220 feet, rounded crown, large upper branches, branches typically curl upward, evergreen.

Leaf: Soft needles, flat, rounded tips, length ¾-1½ inch, blue-green to dark green, radiate in all directions from stem, persistent to eight years, fragrant.

Flower: Monoecious (separate sexes on same tree), female cone woody, reddish, near branch tip; male cone (bud like) small, oblong, reddish, not woody, near branch tip.

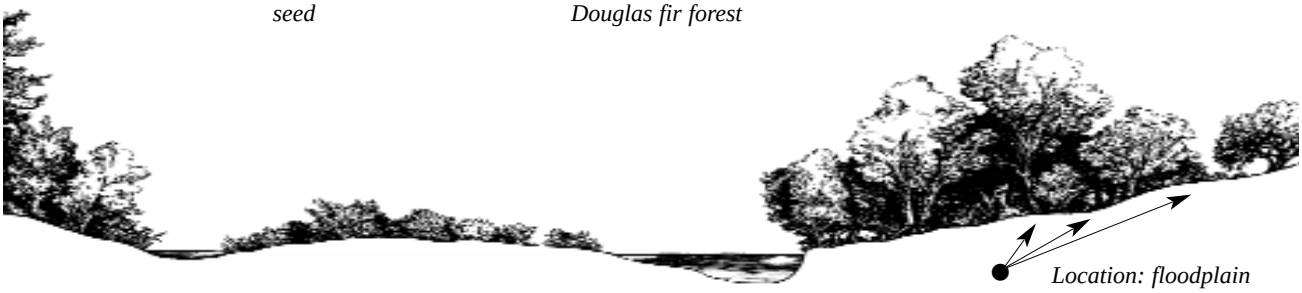
Fruit/Seed: Cone, reddish brown, length 2-3½ inches, scales rounded with distinctive 3-pronged bracts, hangs down, matures in August.

Typical Location: Mixed-evergreen, mixed-conifer forests; elevations below 7,200 feet.

Revegetation Approach: Container.

Notes: Trees provide shelter for wildlife, shading for streams and a source of large woody debris. Seeds are an important forage for small mammals and birds.

leaf



whole plant

seed

Douglas fir forest

Location: floodplain

PACIFIC YEW

Species Name: *Taxus brevifolia*
Family: Taxaceae (yew family)
Plant Type: coniferous tree

Description: Conifer, tree or large shrub, branches may droop slightly, height to 60 feet, trunk width often irregular, bark reddish-brown and often peels, leaves and fruit non-aromatic, evergreen.

Leaf: Needle, yellowish-green on top but lighter underneath, length up to 1 inch, tip pointed, needles arranged in 2 almost parallel rows that may spiral along stems, non-aromatic.

Flower: Dioecious, female cone small, singular, greenish, develops on branch underside; male cone a stalked cluster with 4-8 whirls, roundish, yellow, diameter 1/6 inch, develops on branch underside, numerous cones produced.

Fruit/Seed: Cup-like, fleshy, reddish, diameter up to 1/2 inch, contains one seed that is visible at the end. Fleshy coat is edible (sweet) but seed is poisonous to humans.

Typical Location: Understory of shady mixed-evergreen forests, slopes and canyon bottoms, tolerates shade; elevations 30-5,000 feet.

Revegetation Approach: Container.

Notes: Trees provide large woody debris, shelter, habitat diversity, and nesting sites, as well as shade that maintains cool water temperatures. Fibrous roots bind and stabilize soil. Seeds are an important forage for birds and small mammals. Leaves and bark provide forage for grazers. The cancer-fighting drug Taxol is produced in the bark and, to a lesser extent, in the leaves.

WESTERN HEMLOCK

Species Name: *Tsuga heterophylla*
Family: Pinaceae (pine family)
Plant Type: coniferous tree

Description: Conifer, crown conical and narrow, height to 160 feet, drooping branches, thin reddish-brown bark, stem hairy, evergreen.

Leaf: Needle, white bands on underside, tip rounded, 2 rows of short needles (length ¼-¾ inch), persistent for 4-7 years.

Flower: Monoecious (separate sexes on same tree), female cone oval, length ½-3 inches, hangs down from branch tip, immature greenish, ripens to brown and woody; male cone small, yellowish, not woody, occurs on previous year's growth.

Fruit/Seed: Woody oval cone, length ½-3 inches, hangs down from branch tip, scales open first season releasing seeds, seed length to ¾ inch.

Typical Location: Coastal conifer and mixed evergreen forests, especially in flat or low slope areas; elevations below 2,300 feet.

Revegetation Approach: Container.

Notes: Trees contribute large woody debris to stream and provide shelter, habitat and nesting sites (cavities) for wildlife. Foliage and seeds provide forage, especially for small mammals and birds. Harvested for paper pulp.

whole plant

seed

BLUE ELDERBERRY

Species Name: *Sambucus mexicana*
Family: Caprifoliaceae (honeysuckle family)
Plant Type: Shrub / small tree

Description: Shrub, lacking main trunk, height to 25 feet, often as wide as tall, deciduous.

Leaf: Compound, opposite with 3-9 elliptic to ovate, sharply toothed leaflets (length to 7 inches). Leaflet base often asymmetrical, terminal leaflet much longer than paired leaflets.

Flower: March-September, large (12 inches wide), showy, flat topped clusters of small white flowers.

Fruit/Seed: Clusters of round berries, berry diameter 1/3 inch, almost black with whitish bloom thus appearing bluish, contains 3-5 small seeds.

Typical Location: Streambanks, open areas in forest, established floodplains; elevations below 9,800 feet.

Revegetation Approach: Container.

Key Notes: Related to the red elderberry (*S. racemosa*). Distinguished by flower, fruit shape and fruit color.

Notes: Important source of forage for wildlife, especially for some species of migratory birds. Berries edible to human and used for jellies, pies and wine. Pierce's Disease host plant (see page XI-7 for more information).

CALIFORNIA BLACKBERRY

Species Name: *Rubus ursinus*
Family: Rosaceae (rose family)
Plant Type: Shrub

Description: Mound building, vine-like shrub with tip rooting, running stems. Stems grayish with slender, delicate, straight thorns.

Leaf: Compound with 3 leaflets, leaflets irregularly toothed, length 1-4 inches.

Flower: March-June, generally dioecious (separate sex shrubs): Singular or clusters of white flowers, petal length to 1 inch.

Fruit/Seed: Blackberry (aggregate of black stone fruits), round to oblong, red ripening to black, highly edible, ripens in summer. Multiple small seeds inside a single blackberry.

Typical Location: Moist areas, shade, floodplain stream banks; elevations below 5,000 feet.

Revegetation Approach: Container, plants grow rapidly.

Key Notes: Often confused with the non-native Himalayan blackberry (*R. discolor*). Distinguished by leaf and thorn shape.

Notes: Dense growth provides excellent foraging, nesting and hiding habitat for wildlife. Edible berries are an important food source for many species of mammals and birds. Spreading growth binds soil for erosion control. Pierce's Disease host plant (see page XI-7 for more information on Pierce's Disease).

CALIFORNIA HAZELNUT

Species Name: *Corylus cornuta var. californica*
Family: Betulaceae (birch family)
Plant Type: Shrub / small tree

Description: Shrub or small tree, spreading with multiple stems, open shape, height 5-13 feet, deciduous with bright yellow autumn color.

Leaf: Round to ovate, velvety hairy on both sides, length to 4 inches, coarsely toothed.

Flower: January-April, monoecious (separate sex on same plant): Female flower, tiny cluster (½ inch) containing 2 flowers with bright red stigma, grow as terminal buds, appear before leaves; male flower catkin, length to 2½ inches, remain after leaf fall.

Fruit/Seed: Smooth nut (1-inch-diameter) enclosed in 2 fused, papery, leaf-like bracts, ripen in early autumn.

Typical Location: Streamsides, moist, shady floodplain forests, often found in the understory of redwood and Douglas fir forests; elevations below 7,000 feet.

Revegetation Approach: Container.

Notes: Edible nut is an important food source for many species. It is related to the European hazelnut (filbert). Native Americans used the flexible stems in basket making.

CALIFORNIA WILD ROSE

Species Name: *Rosa californica*
Family: Rosaceae (rose family)
Plant Type: Shrub

Description: Thicket building shrub, height 3-8 feet, stems with compressed, curved thorns.

Leaf: Compound with 5-7 leaflets. Leaflets ovate to oblong, toothed, length to 1½ inch.

Flower: May-August, singular or in clusters, pinkish, ¾ inch petals.

Fruit/Seed: Round, reddish, fleshy rose hip, ¾ inch diameter.

Typical Location: Moist areas, streamsides; elevations below 5,300 feet.

Revegetation Approach: Container. Hybridizes with non-native cultivated roses, care must be taken in collection.

Notes: Important understory species, and good soil stabilizer. Species extremely variable. Rose hip high in vitamin C and important forage for wildlife.

flower

seed

whole plant in flower

CASCARA

Species Name: *Rhamnus purshiana*
Family: Rhamnaceae (buckthorn family)
Plant Type: Shrub / small tree

Description: Erect shrub or small tree, height to 30 feet, branch ends often tufted with leaves, deciduous showing yellow autumn color.

Leaf: Elliptic, alternate, prominent veins, length 2-6 inches, margin smooth.

Flower: May-June, bisexual, small cluster of greenish flowers develop at leaf axis.

Fruit/Seed: Round berry, black when ripe, diameter to 1/2 inch, contains 3 seeds.

Typical Location: Floodplains, coniferous forests, coastal scrub; elevations below 6,500 feet.

Revegetation Approach: Container.

Key Notes: Related to coffeeberry (*R. californica*).

Notes: Berries are attractive forage for birds and mammals, including ringtail and raccoon. Can be toxic to small children.

leaf

flower

seed

whole plant

COFFEEBERRY

Species Name: *Rhamnus californica*
Family: Rhamnaceae (buckthorn family)
Plant Type: Shrub / small tree

Description: Shrub, erect or low and spreading, height to 16 feet, evergreen.

Leaf: Variable, elliptic, alternate, variable in thickness, length 1-3 inches, edges smooth or toothed.

Flower: April-June, bisexual, clusters of 5-60 inconspicuous flowers produced on new growth.

Fruit/Seed: Round berry, ripening from green to red then black when ripe, diameter to ½ inch.

Typical Location: All soil types, woodlands, forests, coastal scrub, chaparral; elevations below 7,500 feet.

Revegetation Approach: Container.

Key Notes: Related to cascara (*R. purshiana*).

Notes: Leaves and berries provide forage for deer, birds feed on berries as well.

leaf

seed

flower

whole plant

COLTSFOOT

Species Name: *Petasites frigidus*
Family: Asteraceae (sunflower family)
Plant Type: Shrub

Description: Perennial herb with creeping rhizomes, dormant in winter with erect stems appearing before leaves in spring, no branches, height 6-24 inches.

Leaf: Grow from stem base, palmate, roundish, multi-lobed, width 2-10 inches, edges coarsely toothed, underside densely hairy.

Flower: March-April, produced at top of a long stalk (length to 24 inches) before leaf-out. Clusters of small, disk-like, white-orange flowers, male and female usually not produced on same disk, sometimes dioecious (separate sex plants).

Fruit/Seed: Achene with thread-like bristles, length <¼ inch.

Typical Location: Streamside, wet soils, deep shade in wood areas; elevations below 1,300 feet.

Revegetation Approach: Container.

Notes: Rhizomatous growth helps stabilize soil.

leaf

flower

whole plant

seed

CREAMBUSH/OCEANSPRAY

Species Name: *Holodiscus discolor*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Shrub, densely branched, stems hairy, bark light brown to gray and shredding with age, height 4-18 feet, deciduous. Has both long stems and short, each with different leaf size.

Leaf: Ovate, alternate, edges coarsely toothed or scalloped. Long stem leaf length 2-5 inches; leaf length ¾ to 1½ inch.

Flower: May-July, showy, large (length 4-10 inches) branched clusters of small, white flowers produced at the ends of mature branches.

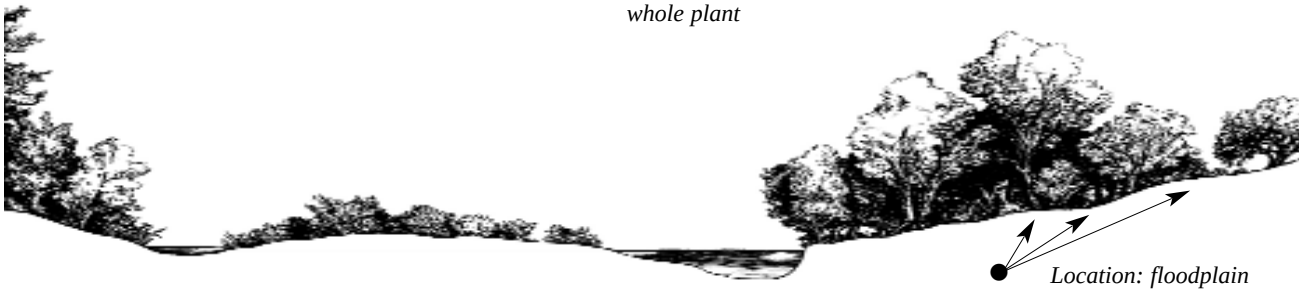
Fruit/Seed: Achene, tiny.

Typical Location: Floodplains, moist woodlands, rocky slopes, variety of plant communities below 6,000 feet.

Revegetation Approach: Container.

Notes: Showy flowers attract birds.

leaf



flower

seed

whole plant

ELK CLOVER

Species Name: *Aralia californica*
Family: Araliaceae (ginseng family)
Plant Type: Shrub

Description: Erect shrub, height 3-9 feet, deciduous. Roots large, contain milky juice.

Leaf: Compound, large with 3-5 leaflets. Leaflet ovate, tip pointed, margins small-toothed, length 6-12 inches.

Flower: June-August, long stalk (length 14-18 inches), multiple branches of small, ball-like clusters of white, sticky flowers.

Fruit/Seed: Berry, round, black, <¼ inch diameter.

Typical Location: Moist shady areas, streamsides, canyons; elevations below 6,500 feet.

Revegetation Approach: Container.

Notes: In same family as non-native English ivy, *Hedera helix*.

leaf

flower

whole plant

seed

HAWTHORNE
WESTERN BLACKHAW

Species Name: *Crataegus douglasii*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Erect shrub or small tree, height to 30 feet, densely branched, armored with strong thorns (length over ½ inch), deciduous.

Leaf: Base wedge shaped, top lobed with double-toothed margin, length 1-3 inches, dark green, shiny.

Flower: May-July, clusters at branch tips, flowers cup-shaped, white, 5-petaled, width ½ inch, fragrant.

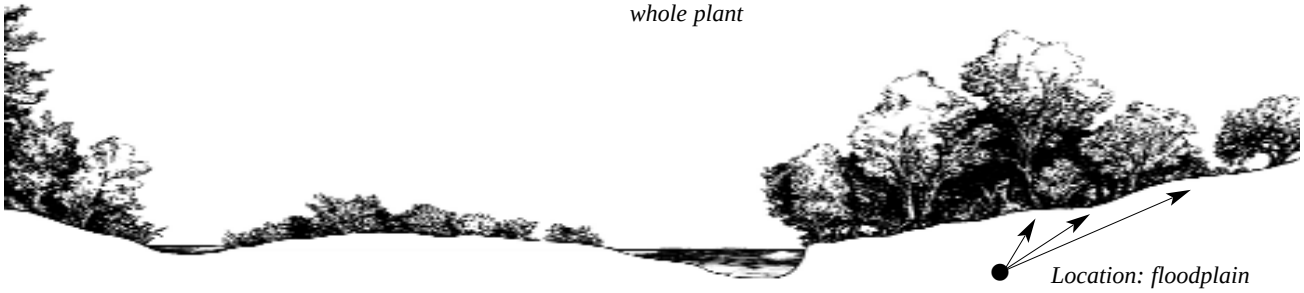
Fruit/Seed: Berry-like, black, fleshy, sweet, diameter to ½ inch, contains tiny nutlet.

Typical Location: Floodplains, meadow edges, forest, grassland, sagebrush scrub; elevations 2,300 to 5,500 feet.

Revegetation Approach: Container.

Notes: Fruit provides excellent forage for birds and flowers attract bees.

leaf and flower



flower

whole plant

seed

MULEFAT

Species Name: *Baccharis salicifolia*
Family: Asteraceae (sunflower family)
Plant Type: Shrub

Description: Erect shrub, spreads to form thickets, height 6-12 feet, evergreen.

Leaf: Lanceolate, length to 6 inches, margins smooth to slightly toothed, underside with 3 large veins.

Flower: March-July, dioecious (separate sex shrubs), clusters of small white disk flowers (width <¼ inch) form at the tips of lateral branches.

Fruit/Seed: Tiny, finely bristled achene.

Typical Location: Dry streambeds, active channel, gravel bars across California at elevations below 4,000 feet.

Revegetation Approach: Container.

Key Notes: Sometimes confused with young willow growth: mulefat has three large veins on the leaf, the willow only has one.

Notes: Important gravel bar colonizer and stabilizer. Native Americans used the straight-growing, woody stems for arrows.

leaf

flower

whole plant

seed

NINEBARK

Species Name: *Physocarpus capitatus*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Erect, spreading shrub, height 3-8 feet, peeling bark distinctive, deciduous.

Leaf: Rounded palmate with 3-5 lobes, length to 5½ inches, margin toothed.

Flower: April-July, dense, round clusters of small, white flowers (petal length <¼ inch).

Fruit/Seed: Round clusters of dry, inflated fruit, fruit contain 2-4 seeds.

Typical Location: Moist banks, floodplains, coniferous forests; elevations below 4,600 feet.

Revegetation Approach: Container.

leaf

flower

whole plant in flower

seed

OSOBERRY

Species Name: *Oemleria cerasiformis*
Family: Rosaceae (rose family)
PlantType: Shrub / small tree

Description: Shrub or small tree, height to 15 feet, stems mostly straight and slender, bark gray to reddish, deciduous.

Leaf: Elliptical, alternate, length 2-5 inches, margin smooth, smells like cucumber when crushed.

Flower: January-April, dioecious (separate sex shrubs) with some bisexual flowers, hanging clusters (length 1-4 inches) of 5-10 flowers produced at branch ends, female and male flowers small, fragrant, petals white, clawed, blooms before leafing.

Fruit/Seed: Berry, bean-shaped, waxy, peach colored turning bluish when ripe, diameter ½ inch.

Typical Location: Floodplains, chaparral, shaded coniferous forest, streamsides; elevations below 5,600 feet.

Revegetation Approach: Container.

Key Notes: Name changed to *Oemleria* from *Osmaronia*.

Notes: Berries provide forage for birds.

leaf

flower

seed

whole plant

PACIFIC WAX MYRTLE

Species Name: *Myrica californica*
Family: Myricaceae (wax myrtle family)
Plant Type: Shrub / small tree

Description: Erect shrub or small tree, densely branched, height 6-30 feet, bark smooth and gray to light-brown, evergreen.

Leaf: Lanceolate to oblong, dark green, glossy, length to 5 inches, spicy scent.

Flower: March-April, monoecious (separate sexes on same shrub), female and male catkin scaly, length to 1 inch.

Fruit/Seed: Round, dark purple nut with pale waxy coating, diameter ¼ inch.

Typical Location: Coastal areas (including sand dunes) north of Santa Monica county into Washington, canyon walls and moist slopes below 500 feet.

Revegetation Approach: Container.

Notes: Wax myrtle berries are important forage for many bird species. The name comes from the waxy coating on the berries, which were historically used in the making of soaps and candles.

leaf and flower

seed

whole plant

Location: floodplain

RED ELDERBERRY

Species Name: *Sambucus racemosa*
Family: Caprifoliaceae (honeysuckle family)
Plant Type: Shrub / small tree

Description: Shrub, lacking main trunk, height to 20 feet, deciduous.

Leaf: Compound, opposite with 5-7 leaflets, leaflets ovate to lanceolate, base often asymmetrical, length to 6 inches, margin sharply toothed.

Flower: March-July, domed shaped clusters (width to 4 inches) of small whitish flowers.

Fruit/Seed: Clusters of berries, berry bright red, round, diameter ¼ inch, contains 3-5 small seeds.

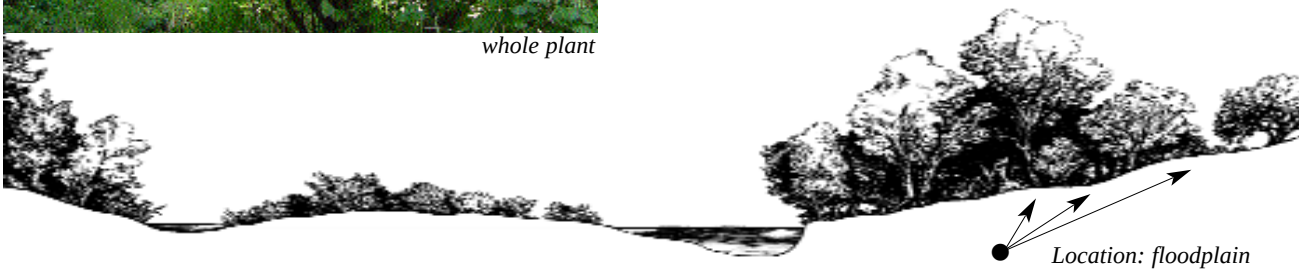
Typical Location: Moist areas, coastal.

Revegetation Approach: Container.

Key Notes: Related to the blue elderberry (*S. mexicana*). Distinguished by flower and fruit shape.

Notes: Important forage for birds. Berries bitter tasting to humans and sometimes toxic.

leaf



flower

seed

whole plant

RED FLOWERING CURRANT
PINK WINTER CURRANT

Species Name: *Ribes sanguineum*
Family: Grossulariaceae (gooseberry family)
Plant Type: Shrub / small tree

Description: Erect shrub, height to 12 feet, stems thin, spreading, deciduous.

Leaf: Palmate, dark green, finely haired, lobes rounded, margin irregularly toothed, length 2-4 inches.

Flower: January-June, bisexual, drooping clusters (length 2-4 inches) of 1-20 flowers, flowers small, red to pink.

Fruit/Seed: Berry, blue-black with whitish bloom, diameter to ½ inch.

Typical Location: Floodplains, open spaces, chaparral, woodland, mixed evergreen and closed pine forests; elevations to 6,000 feet.

Revegetation Approach: Container.

Notes: Flowers and fruit attract birds.

leaf

flower

branch

seed

RED TWIG DOGWOOD
BROWN DOGWOOD

Species Name: *Cornus glabrata*
Family: Cornaceae (dogwood family)
Plant Type: Shrub / small tree

Description: Shrub or small tree, generally forms dense thickets, height to 20 feet, stems slender, brown to red, deciduous.

Leaf: Lanceolate to elliptical, tapered at both ends, length to 2 inches, leaf veins in 3-4 pairs.

Flower: May-July, bisexual, flat topped clusters (2 inch width) of small, white flowers.

Fruit/Seed: Berry, white to bluish, length ¼ inch, seed with almost smooth sides, ripens in late summer.

Typical Location: Floodplains, moist areas; elevations below 5,000 feet.

Revegetation Approach: Container.

Key Notes: Leaf and seed morphology distinguish from stream dogwood (*C. sericea*).

leaf

flower

seed

whole plant

SALMONBERRY

Species Name: *Rubus spectabilis*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Erect shrub, height 6-12 feet, branches with few short, straight thorns, mature branches woody, bark shredding, forms dense thickets, deciduous.

Leaf: Compound with 3 leaflets. Leaflets palmate with 3 shallow lobes, length 2-4 inches, edges irregularly toothed.

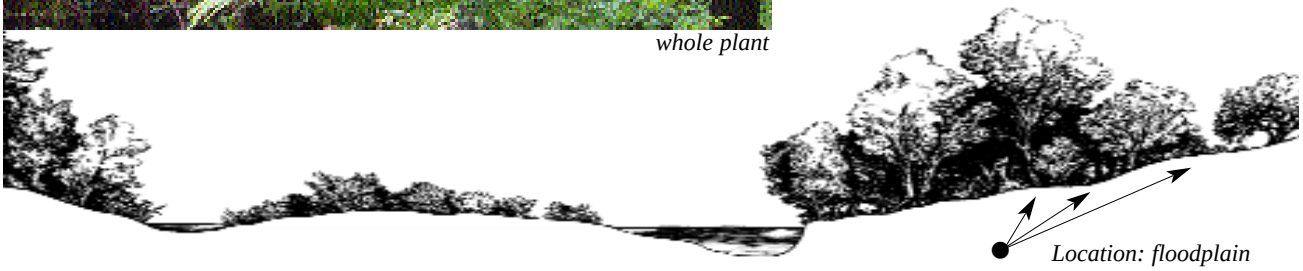
Flower: March-June, singular and clusters, petal length to ½ inch, red-purple, papery.

Fruit/Seed: Raspberry-like (aggregate of stone fruits), yellow to red, edible, ripen in summer.

Typical Location: Moist shady areas, streamsides; elevations below 5,000 feet.

Revegetation Approach: Container.

Key Notes: Related to the blackberry, raspberry and thimbleberry.



Notes: Edible berries provide forage for wildlife.

leaf

flower

seed

whole plant

SNOWBERRY

Species Name: *Symphoricarpos albus* var. *laevigatus*
Family: Caprifoliaceae (honeysuckle family)
Plant Type: Shrub / small tree

Description: Erect shrub, branching stems, height to 6 feet, spreads rhizomatously, deciduous.

Leaf: Oval to almost round, opposite, length ½ to 2½ inches.

Flower: May-June, cluster of 8-16 pinkish, bell shaped flowers, flowers hairy inside.

Fruit/Seed: Distinctive snow-white berry (½ inch diameter), ripens in autumn and persists on bare branches throughout winter. Two tiny seeds per berry.

Typical Location: Mature riparian forest, shady woods, streambanks, north facing slopes, well-drained soils; elevations below 4,000 feet.

Revegetation Approach: Container.

Notes: Provides erosion control. Important understory species in riparian floodplains. Berries are an important food source for wildlife but may be toxic to humans. Foliage and twigs browsed by deer. Native Americans used the wood for construction of ceremonial tobacco pipes.

leaf

flower

seed

whole plant

SPIRAEA

Species Name: *Spiraea douglasii*
Family: Rosaceae (rose family)
Plant Type: Shrub

Description: Erect shrub, height 3-6 feet, spreads rhizomatously forming large clumps, deciduous.

Leaf: Elliptic, alternate, rounded tip, length 1-5 inches, margin toothed.

Flower: June-September, inflorescence long (2-5 inch length), thin with clusters of small, rose pink flowers, develop at branch ends.

Fruit/Seed: Fruit pod-like, dry, small.

Typical Location: Moist areas, coniferous forests, valley flats, streamside, seeps; elevations below 6,500 feet.

Revegetation Approach: Container.

Key Notes: *Spiraea douglasii* is replaced by *Spiraea denisflora* at higher elevations.

Notes: Good ground stabilizer on moist banks. Rose color of flowers is unique to this shrub.

leaf

seed

flower

whole plant

STINK CURRANT

Species Name: *Ribes bracteosum*
Family: Grossulariaceae (gooseberry family)
Plant Type: Shrub / small tree

Description: Erect shrub, height to 13 feet, stems sparsely hairy, aromatic with an unpleasant odor.

Leaf: Deeply 5-7 lobed, length 1½-8 inches, upper surface shiny, dull below, margins toothed.

Flower: February to June, erect clusters of 20-50 flowers, flowers small, base saucer-like, petals small, white.

Fruit/Seed: Round berry, black with a whitish bloom, diameter to ½ inch.

Typical Location: Moist forests; elevations below 4,600 feet.

Revegetation Approach: Container.

Notes: Berries provide forage for wildlife.

leaf

flower

seed

whole plant

Location: floodplain

STREAM DOGWOOD

Species Name: *Cornus sericea*
Family: Cornaceae (dogwood family)
Plant Type: Shrub / small tree

Description: Shrub, spreads by branch tip rooting and underground stems, height to 15 feet, branches reddish to purple, deciduous with bright red autumn color.

Leaf: Lanceolate to elliptical, tapered at both ends, length to 4 inches, leaf veins in 4-7 pairs.

Flower: May-July, bisexual, flat topped clusters (2 inches wide) of small, white flowers appearing with and after leaves.

Fruit/Seed: Berry, white to cream colored, length to 1/4 inch, seed with grooved sides, ripens in late summer.

Typical Location: Active channel, streamsides, floodplains, moist areas; elevations below 9,000 feet.

Revegetation Approach: Container.

Key Notes: A good identifying characteristic is to look for thin latex threads when leaf is pulled apart. Leaf and seed morphology distinguish from red-twig dogwood (*C. glabrata*).

Notes: Seeds ripen in summer and persist into winter, making excellent wildlife forage. Native Americans used plant in basket weaving.

leaf

flower

seed

whole plant

THIMBLEBERRY

Species Name: *Rubus parviflorus*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Erect shrub, height 3-6 feet, branches with soft hairs rather than thorns, mature branches woody, bark shredding, forms thickets, deciduous.

Leaf: Palmate with 5 unequal lobes, length 2-6 inches, surface soft, margin toothed.

Flower: March-August, clusters at branch ends, only a few per plant, petals length to 1 inch, white, floppy looking.

Fruit/Seed: Raspberry-like (aggregate of red stone fruits), dull red ripening to deep red, edible, ripens in summer.

Typical Location: Moist shady areas, streamsides, floodplains; elevations below 8,200 feet.

Revegetation Approach: Container.

Key Notes: Related to the blackberry, raspberry and salmonberry.

Notes: Edible berries provide forage for wildlife. Name derived from its distinctive berry, which looks like a thimble when removed from the plant.

leaf

flower

seed

whole plant

TOYON
CALIFORNIA HOLLY
CHRISTMAS BERRY

Species Name: *Heteromeles arbutifolia*
Family: Rosaceae (rose family)
Plant Type: Shrub / small tree

Description: Shrub or small tree, multi-trunked, height to 30 feet, bark gray, evergreen.

Leaf: Oblong, leathery, glossy, dark green, length to 4 inches, margin sharply toothed.

Flower: June-July, flat toped clusters, flowers white, small (petal length to <¼ inch), produced at ends of older branches.

Fruit/Seed: November-January, bright-red berry, fleshy, diameter ¼ inch, persistent, contains 3-6 brown seeds.

Typical Location: Chaparral, oak woodland, floodplains, mixed-evergreen forest, dry to semi-dry slopes and canyons; elevations below 4,200 feet.

Revegetation Approach: Container.

Notes: Vital forage for California birds, especially during late winter.

leaf

flower

seed

whole plant

Location: floodplain

TWINBERRY

Species Name: *Lonicera involucrata*
Family: Caprifoliaceae (honeysuckle family)
Plant Type: Shrub / small tree

Description: Erect densely foliaged shrub, branches slender, height to 10 feet, deciduous.

Leaf: Elliptical to ovate, length 2-4 inches.

Flower: March-July, paired tubular flowers (½ inch long), yellow with reddish tinge. "Leaf-like" bracts fuse to form cup underneath flower pair. Bracts darken to red or purple as flower matures.

Fruit: Distinctive paired round berries (1/3 inch diameter) containing tiny seeds, surrounded by colorful cup-like bracts.

Typical Location: Floodplains, moist, shady areas, streamsides; elevations below 9,500 feet.

Revegetation Approach: Container.

Notes: Close relative to the native honeysuckle, *L. hispidula* var. *vacillans*.

leaf

flower

seed

whole plant

VINE MAPLE

Species Name: *Acer circinatum*
Family: Aceraceae (maple family)
Plant Type: Shrub / small tree

Description: Small tree or shrub, often reclining, rooting and vine-like (especially in shaded areas), height to 20 feet in full sun, deciduous with bright autumn color.

Leaf: Palmate, 5-7 lobes, width 2-5 inches.

Flower: April-May, clusters of 4-10 small, inconspicuous flowers, sepals deep red, petals pale green.

Fruit/Seed: Distinctive paired achenes with wings, achene round, reddish, wings spreading almost 180°.

Typical Location: Shaded stream banks, floodplains; elevations below 5,000 feet.

Revegetation Approach: Container.

Key Notes: Related to the big leaf maple (*A. macrophyllum*) and box elder (*A. negundo*). Easily distinguished by leaf shape.

Notes: Foliage provides forage for deer. Flowers, buds and seeds provide forage for birds and small mammals. Squirrels will cache seeds.

leaf

flower

seed

whole plant

Location: floodplain

WESTERN AZALEA

Species Name: *Rhododendron occidentale*
Family: Ericaceae (heath family)
Plant Type: Shrub / small tree

Description: Erect shrub, densely branched with slender twigs, height 5-16 feet, deciduous.

Leaf: Elliptic, thin, mid-vein not sunken, length 1-3½ inches, edges smooth.

Flower: April-August, clusters of large, showy, white or pinkish flowers, length to 2 inches, 3-4 petals fused, strong fragrance.

Fruit/Seed: Dry capsule with many scale-like seeds.

Typical Location: Streambanks, seeps, floodplains, coniferous forests; elevations below 7,200 feet.

Revegetation Approach: Container.

Notes: *Rhododendron* is a Greek word meaning "rose tree", as signified by the showy, fragrant flowers.

leaf

flower

seed

whole plant

WESTERN SPICEBUSH

Species Name: *Calycanthus occidentalis*
Family: Calycanthaceae (sweet-shrub or calycanthus family)
Plant Type: Shrub / small tree

Description: Erect shrub, bushy round shaped, aromatic (described as old wine barrel smell), height to 9 feet, deciduous with yellow autumn color.

Leaf: Oval to oblong, opposite, length 2-6 inches, slightly hairy underneath, aromatic when crushed.

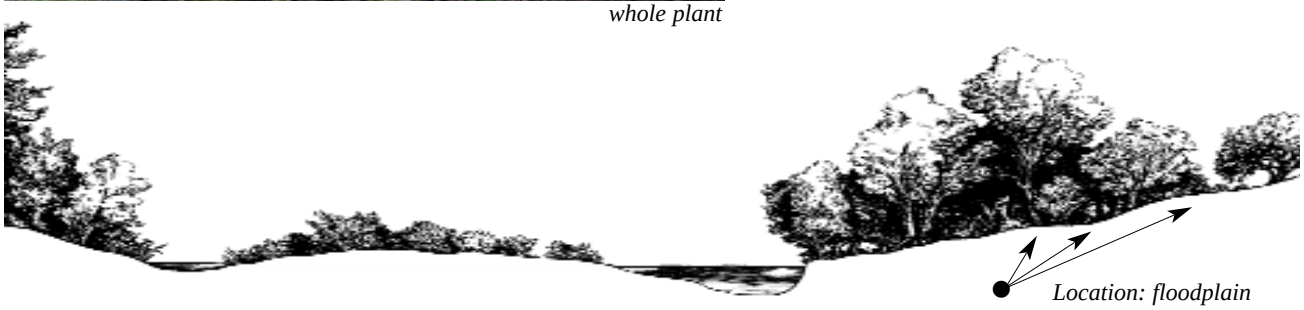
Flower: April-August, bisexual, terminal single flower, deep reddish-brown, diameter 2 inches, looks like a tiny water lily, smells "spicy".

Fruit/Seed: Oval, leathery, cuplike receptacle containing velvety, whitish-brown seeds that ripen in the autumn.

Typical Location: Moist, shady areas, floodplains, canyons, streamsides, seeps; elevations below 5,000 feet.

Revegetation Approach: Container.

leaf



flower

fruit with seed inside

whole plant

WILD MOCK ORANGE

Species Name: *Philadelphus lewisii*
Family: Philadelphaceae (mock orange family)
Plant Type: Shrub / small tree

Description: Erect shrub, loosely branched, many trunks, young bark reddish, older bark gray and peeling, height to 10 feet, deciduous.

Leaf: Ovate, opposite, margin partially toothed, length 1-3 inches.

Flower: May-July, terminal clusters of 6 or more flowers, white, width ¾-1 inch, numerous stamens, fragrant.

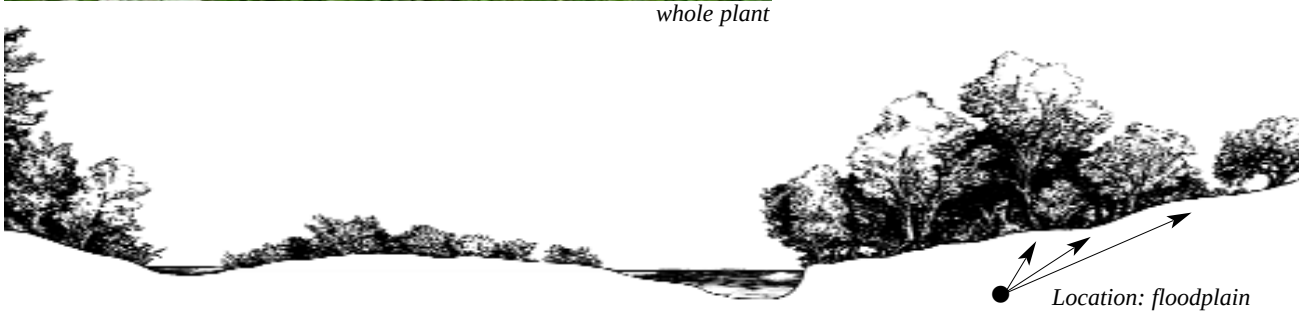
Fruit/Seed: Dry, multi-seeded capsule.

Typical Location: Slopes, canyons, forest openings, rocky slopes, canyons; elevations below 5,000 feet.

Revegetation Approach: Container.

Notes: Dense growth provides good cover. Seeds eaten by quail and squirrels.

leaf



flower

seed

whole plant

CALIFORNIA WILD GRAPE

Species Name: *Vitis californica*
Family: Vitaceae (grape family)
Plant Type: Vine

Description: Sprawling woody vine, climbs surrounding vegetation, bush-like without support, tendrils produce opposite leaves, bark peeling, deciduous.

Leaf: Rounded with 0-3 shallow, palmate lobes, alternate, hairy especially on the underside, margins finely toothed.

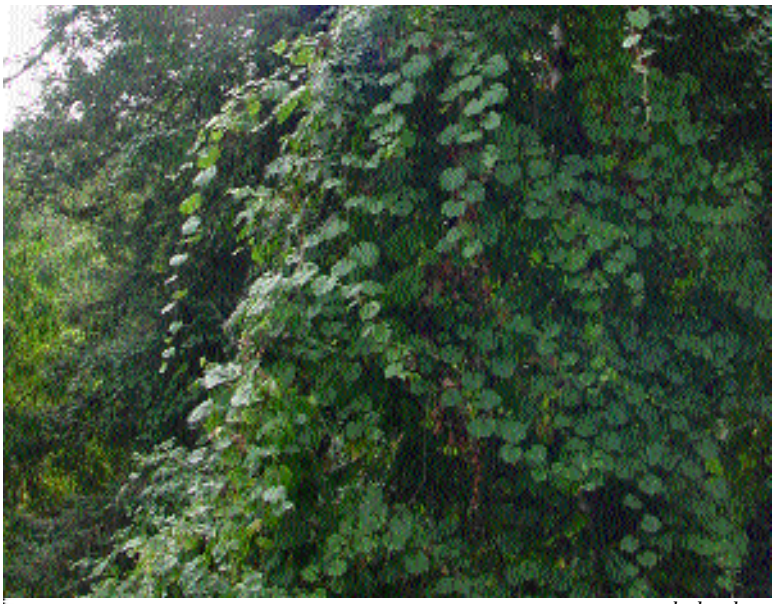
Flower: May-July, numerous clusters of unisexual, greenish-yellow, small, fragrant flowers.

Fruit/Seed: Clusters of spherical berries, purple with whitish bloom, diameter ½ inch.

Typical Location: Streamsides, floodplains, springs, and canyons; elevations below 3,200 feet.

Revegetation Approach: Container, care in collection should be taken as the wild grape readily hybridizes with European imports.

Notes: Berries are an important forage for wildlife.



leaf

flower

seed

whole plant

DUTCHMAN'S PIPEVINE

Species Name: *Aristolochia californica*
Family: Aristolochiaceae (pipevine family)
Plant Type: Vine

Description: Semi-woody vine, slender stems with fine short hairs, twining stems, length to 16 feet, deciduous.

Leaf: Heart shaped, bright green, soft-hairy, alternate, length 1-6 inches, margins smooth.

Flower: January-April, U-shaped (pipe-like), hanging, green to brown, veins purple, interior lined with pink-red, length 1-1½ inches, appear before leaves, metallic fragrance.

Fruit/Seed: Capsule, angular, light green, length to 2 inch.

Typical Location: Streamsides, floodplains, forest, chaparral; elevations below 2,300 feet.

Revegetation Approach: Container.

Notes: Provides food for the pipevine swallowtail larvae and is, in turn, pollinated by the pipevine swallowtail butterfly. Produces a specialized glycoside, known to cause heart attacks in vertebrates, which provides swallowtail larvae with a defense against predators. Other butterflies mimic pipevine swallowtail coloration as a predator defense strategy.

leaf and seed

flower

whole plant

seed with pipevine swallowtail caterpillar

HONEYSUCKLE

Species Name: *Lonicera hispidula*
Family: Caprifoliaceae (honeysuckle family)
Plant Type: Vine

Description: Climbing vine, slender stems, length to 20 feet.

Leaf: Oblong, opposite, length to 3 inches, upper pairs connected around stem.

Flower: April-July, clusters of paired flowers, flowers funneled, double-lipped blooms, upper lip four-lobed, very fragrant, purple to pink, length to ½ inch.

Fruit/Seed: Round, red berry, diameter ¼ inch.

Typical Location: Streamsides, floodplain, wooded slopes, canyons; elevations below 3,600 feet.

Revegetation Approach: Container.

Notes: Related to the native twinberry, *Lonicera involucrata*.

leaf

flower

whole plant

seed

MANROOT
WILD CUCUMBER

Species Name: *Marah fabaceus*
Family: Cucurbitaceae (gourd family)
Plant Type: Vine

Description: Perennial vine, climbs, builds mounds and sprawls, stems soft/not-woody, sometimes with prickles, climbs using lateral tendrils, length to 21 feet, large root or tuber.

Leaf: Palmate, 5-7 lobes, large.

Flower: February-April, monoecious (separate sexes on same vine), female and male similar, white to yellowish-green, cup shaped, width to ½ inch, female flowers solitary, male flowers in clusters.

Fruit/Seed: Spiny gourd, rounded with pointed tip, diameter 1½-2 inches, contains 4 large, often flat, brown seeds.

Typical Location: Streamsides, floodplains, washes, shrubby areas, open areas, and slopes; elevations below 5,200 feet.

Revegetation Approach: Container.

Notes: The common name "manroot" relates to the very large tuber root that can grow 4-8 feet long. Native Americans traditionally used pounded root in tidepools and stream pools to stun fish.

leaf

flower

seed

whole plant

POISON OAK

Species Name: *Toxicodendron diversilobum*
Family: Anacardiaceae (sumac or cashew family)
Plant Type: Vine

Description: Shrub, occasionally tree-like (height 1½-14 feet) or vining (length to 85 feet) into tree canopies, gray to red-brown twigs, deciduous.

Leaf: Compound with 3 (occasionally 5) leaflets, leaflets resinous, smooth, shiny, red in autumn, lobed, terminal leaflet length to 3 inches, lateral leaflet length to 2¾ inches.

Flower: April-May, clusters of small, cream-colored flowers, petals ovate.

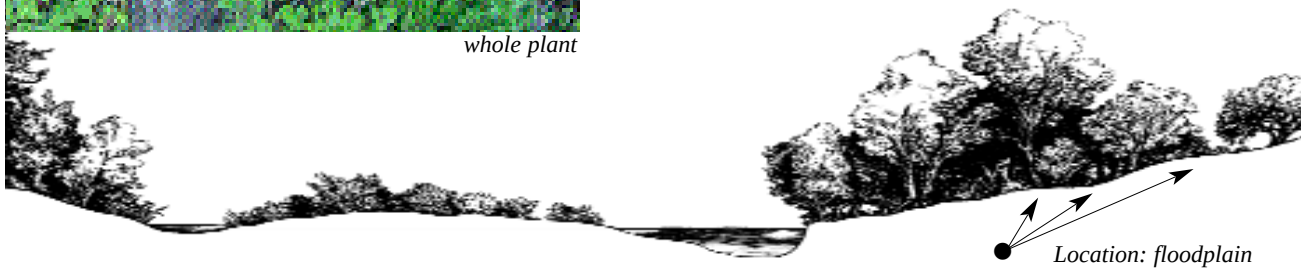
Fruit/Seed: Round berry, white, leathery, diameter <¼ inch.

Typical Location: Floodplains, canyons, slopes, chaparral, oak woodlands; elevations below 5,400 feet.

Revegetation Approach: Not recommend for cultivation.

Notes: Resin on leaves, stems and flowers causes painful dermatitis to humans. Latin name means "poisonous tree". Fruit is an important winter forage for wildlife.

leaf



flower

seed

whole plant

Location: floodplain

VIRGIN'S BOWER
PIPESTEM

Species Name: *Clematis lasiantha*
Family: Ranunculaceae (buttercup family)
Plant Type: Vine

Description: Semi-woody vine, stems slender, climbs surrounding vegetation with tendril-like leaf petiole, deciduous.

Leaf: Compound with 3-5 leaflets, leaflets elliptic/ovate, coarsely toothed or 3-lobed, length 1-2 inches.

Flower: January-June, single flower, showy, diameter 1¼ inch, no petals but 4 cream-colored sepals showy and petal-like.

Fruit/Seed: Head-like clusters of small achenes with distinctive long feathery tails.

Typical Location: Floodplains, hillsides, chaparral, open woodlands; elevations below 6,600 feet.

Revegetation Approach: Container.

leaf

flower

whole plant

seed

BULRUSH
TULE

Species Name: *Scirpus acutus* var. *occidentalis*
Family: Cyperaceae (sedge family)
Plant Type: Emergent

Description: Erect perennial, spreads by rhizomes forming dense clusters, stems round, width to ½ inch, height 5-13 feet.

Leaf: Reduced to a membranous flat blade along stem base, length to 3 inches.

Flower: May-August, bisexual, erect, 1-7 branched clusters, straw colored or orange to dark reddish brown, produced at stem tip, flowers spiny.

Fruit/Seed: Achene, slightly angled sides, beaked, gray-brown, wind and water dispersed.

Typical Location: Active channel, streamsides, marshes, lakes; elevations below 8,200 feet.

Revegetation Approach: Container or transplant.

Notes: May provide critical juvenile fish habitat. Important nesting and escape cover for small mammals, waterfowl and other birds. Seeds provide forage for waterfowl. Thick rhizome root system provides some river and lake bank stabilization. Native Americans used *Scirpus* roots for basketry.

flower

whole plant

CATTAIL

Species Name: *Typha latifolia*
Family: Typhaceae (cattail family)
Plant Type: Emergent

Description: Erect perennial, dense clumps of tall blades (height 5-10 feet), creeping rootstock.

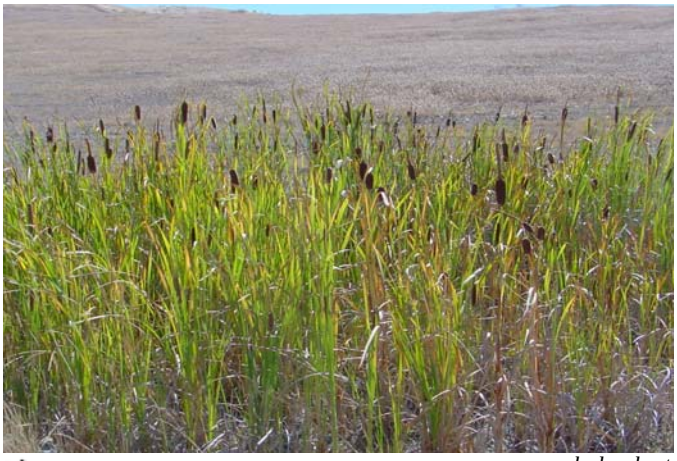
Leaf: Blade, alternate, flat on the inside, rounded on the outside, interior spongy, tip pointed, height to over 6 feet.

Flower: June-July, cattail, terminal flowers on a round stalk, male flowers above female flowers, no separation between male and female clusters, female flowers green in flower, turn brown as seeds ripen.

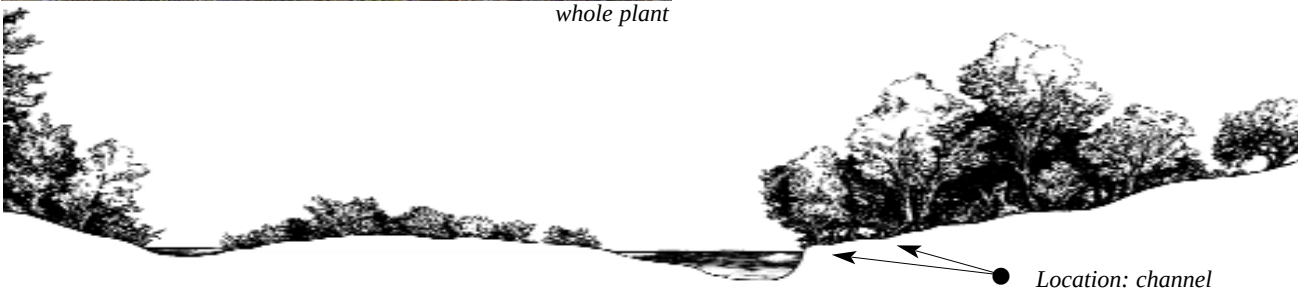
Fruit/Seed: Tiny, brown nutlets, length 1/25 inch, released with white mass of wooly hairs, seeds disperse by floating on wind or water.

Typical Location: Lakes, marshes, any slow moving or stagnant water; elevations below 6,600 feet.

Revegetation Approach: Seed, transplant.



Notes: Nest building habitat and shelter for birds and waterfowl. Tolerates saline conditions.



leaf and flower

seed

whole plant

Location: channel

CREEPING WILD RYE

Species Name: *Leymus triticoides*
Family: Poaceae (grass family)
Plant Type: Herbaceous

Description: Mat forming grass, height 1½-4 feet, perennial, stems smooth to slightly hairy, spreads by rhizomes, may remain green even in dry season, leaf blades lean away from stem.

Leaf: Blade, flat, surface slightly rough.

Flower: Cluster of grass spikelets at end of tall stem (height 2-8 inches), spikelets 1-3 per node.

Fruit/Seed: Achene-like grain.

Typical Location: Streamsides, floodplains, moist meadows and areas subject to flooding; elevations below 7,500 feet.

Revegetation Approach: Container, transplant.

Notes: Useful in binding soil for erosion control, lies flat when flooded and recovers quickly. Tolerates saline conditions.

whole plant

whole plant

HORSETAIL
SCOURING RUSH

Species Name: *Equisetum spp.*
Family: Equisetaceae (horsetail family)
Plant Type: Emergent

Description: Perennial from spreading rhizomes, erect annual (some perennial) stems, stem is segmented with distinct rings, ring may have whirl of wiry leaf-like branches, spore producing non-woody cone forms at stem tips, may have separate sterile and fertile stems, height 4 inches to 6 feet.

Leaf: None or scale-like, close growing, brown (wiry branches are leaf-like, but not leaves).

Flower: None, sexual reproduction by a spore producing non-woody cone (not a flowering plant).

Fruit/Seed: Spore, spherical, green.

Typical Location: Streamsides, moist areas, roadside ditches, seeps, disturbed areas; elevations below 9,800 feet.

Revegetation Approach: Container or transplant.

Notes: Provides soil stabilization. Native Americans made tea for medicinal uses and used the fertile stems of *E. telmateia* as sandpaper. Outer surface has high silica content.

whole plant with branches

whole plant with fertile stems

INDIAN RHUBARB
UMBRELLA PLANT

Species Name: *Darmera peltata*
Family: Saxifragaceae (saxifrage family)
Plant Type: Herbaceous

Description: Perennial herb, stemless, flowers and leaves from ground, flowers before leaves appear, spreads by rhizomes, height to 5 feet, leaves turn bright red in autumn.

Leaf: Palmate, multi-lobed, height to 5 feet, broad (width to 3 feet), stem attached towards center of leaf, margins with irregular teeth.

Flower: April-July, umbrella shaped cluster of small, white to pale pink flowers, grows on long stalk (length 1 to 5 feet) before leaves.

Fruit/Seed: 2 dry red follicles, length to ½ inch.

Typical Location: Rocky streambanks; elevations below 6,000 feet.

Revegetation Approach: Container, transplant.

Notes: The common name "umbrella plant" describes the leaves, which look like umbrellas blown inside out.

leaf

flower

whole plant

Location: channel

MUGWORT

Species Name: *Artemisia douglasiana*
Family: Asteraceae (sunflower family)
Plant Type: Herbaceous

Description: Perennial erect herb, stems in dense clump, height to 8 feet, spreads by rhizomes.

Leaf: Coarsely 3-5 lobed, evenly-spaced, alternate, underside hairy and grayish, aromatic (sage-like), length to 6 inches.

Flower: June to October, dense clusters on elongated leafy stems, length 4-12 inches, disk flowers small (diameter <¼ inch), bell shaped, greenish.

Fruit/Seed: Tiny dry achene.

Typical Location: Moist low places, open and shady places, drainages; elevations below 7,200 feet.

Revegetation Approach: Container.

Notes: Common, stabilizes soil. Pierce's Disease host plant (see page XI-7 for more information).

leaf

flower

whole plant

RUSH

Species Name: *Juncus* spp.
Family: Juncaceae (rush family)
Plant Type: Emergent

Description: Erect grasslike annual or perennial, usually spread by rhizomes forming dense clumps, stems wiry, round or flat, height to 4 feet.

Leaf: Wiry, round or flat, sometimes greatly reduced to just tip of stem.

Flower: May-August, bisexual, lateral clusters near stem tip, 1-50 flowers, flower green or purplish-brown, inconspicuous.

Fruit/Seed: Many, tiny beaked seeds.

Typical Location: Active channel, streamsides, marshes, seeps, springs; elevations below 12,000 feet.

Revegetation Approach: Container or transplant.

Key Notes: Accurate identification requires an understanding of flower characteristics.

Notes: Thick rhizome root system provides streambank stabilization. Native Americans used rushes for basketry and fish trap construction.

whole plant and flower

Juncus effusus

whole plant

SEDGE

Species Name: *Carex* spp.
Family: Cyperaceae (sedge family)
Plant Type: Emergent

Description: Perennial, bladed (grass-like) with 3-sided stems and flat blades, forms clumps or tufts, height to 4 feet, often evergreen, some species spread by rhizomes.

Leaf: Blade, usually flat, can be rolled, thick (width ¼-½ inch).

Flower: Unisexual, male spikelets sit above the female spikelets near the blade tip, flower stalk solid and without nodes.

Fruit/Seed: Tiny, 2-4 sided achene.

Typical Location: Depends on species: active channel, floodplain, wet areas, valley slopes, seasonally wet areas; elevations below 13,000 feet.

Revegetation Approach: Container, transplant.

Key Notes: Identification to species usually requires microscopic evaluation of flowering parts.

Notes: With over 1,000 species, sedges comprise one of the largest genera of plants in the world. Native Americans traditionally used certain species of *Carex* in basket weaving.

Carex nudata

Carex spp.

SPIKE RUSH

Species Name: *Eleocharis spp.*
Family: Cyperaceae (sedge family)
Plant Type: Emergent

Description: Erect annual or perennial, spreads by rhizomes, stems round, wiry, generally grooved, height to 3 feet.

Leaf: Generally without or reduced to sheath around stem, sometimes leaves from base.

Flower: Bisexual, erect, single cluster at stem tip, flowers few to many.

Fruit/Seed: Achene, 2-3 sided or round.

Typical Location: Streamsides, marshes, meadows; elevations below 8,500 feet.

Revegetation Approach: Container or transplant.

Notes: Stems, roots and seeds are all forage for waterfowl.

whole plant and flower

flower

whole plant

STINGING NETTLE

Species Name: *Urtica dioica*
Family: Urticaceae (nettle family)
Plant Type: Herbaceous

Description: Perennial erect herb, stems with fine hairs, spreads by rhizomes, height to 10 feet.

Leaf: Lanceolate to widely ovate, margin toothed, veins 3-5 originating at base, length to 1½ inches.

Flower: April, mostly dioecious flower clusters (length to 3 inches) in leaf axis, male and female flowers small, sepals greenish, without petals.

Fruit/Seed: Ovate achene.

Typical Location: Streambanks, woodland marshes, moist waste areas; elevations below 10,000 feet.

Revegetation Approach: Container.

Key Notes: A subspecies is native to Eurasia and naturalized in North America, care must be taken in identification.

Notes: This plant contains tiny hollow hairs, which, upon contact with human skin, releases an irritating, stinging acid (formic acid), hence the name. Pierce's Disease host plant (see page XI-7 for more information).

leaf

flower

whole plant

flower

APPENDIX XI-B

CENTRAL AND NORTH COAST INVASIVE NON-NATIVE PLANTS

ACACIA

Species Name: *Acacia* spp.
Family: Fabaceae (legume family)
Plant Type: Exotic invasive tree

Description: Tree, height to 40 feet, evergreen.

Leaf: Distinctive primary and secondary leaflets, silver-gray, hairy. Primary leaflet: 10-25 pairs of secondary leaflets; secondary leaflet: 20-50 pairs of tiny, thin, overlapping leaflets (length to <¼ inch).

Flower: Bisexual, spherical clusters of 25-30 tiny, bright yellow flowers.

Fruit/Seed: Pod, straight or slightly curved, slightly indented between seeds, length 2-3 inches.

Typical Location: Disturbed areas, roadsides, elevations below 1,600 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Members of the family Fabaceae have root nodules that contain atmospheric nitrogen-fixing bacteria.

Notes: Ornamental species brought from Australia. Highly invasive and has little wildlife value. Chemicals leaching from trees may cause allelopathic effects resulting in reduced or inhibited germination and growth in native plants.

leaf

flower

seed

whole plant

Location: floodplain

CAPE IVY

Species Name: *Delairea odorata*
Family: Asteraceae (sunflower family)
Plant Type: Exotic invasive vine

Description: Perennial vine, stems green or purple, older stems woody, ground cover develops to 30 inches high, climbs to considerable heights, spreads by runners that root at nodes.

Leaf: Palmate with 5-9 pointed lobes, shiny, greenish-yellow, length 1-3 inches.

Flower: Spring blooming, disk-like flowers, bright yellow, numerous.

Fruit/Seed: Achenes, tiny, wind dispersed, mostly sterile in California.

Typical Location: Moist forest, riparian areas, seasonal wetlands, coastal areas; elevations below 650 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Name changed to *Delairea odorata* from *Senecio mikanioides*.

Notes: Native to South Africa. Highly invasive and grows rapidly. Extreme pest with climbing behavior resulting in smothering and exclusion of native vegetation.

leaf

whole plant

flower

ENGLISH IVY

Species Name: *Hedera helix*
Family: Araliaceae (ginseng family)
Plant Type: Exotic invasive vine

Description: Woody vine, ground cover or climber with aerial rootlets, spreads by runners, evergreen.

Leaf: Variable shape, palmate with 3-5 lobes to ovate or diamond shaped, length to 4 inches, base width to 4 inches, edges smooth.

Flower: Branches with small, ball-like clusters of greenish flowers.

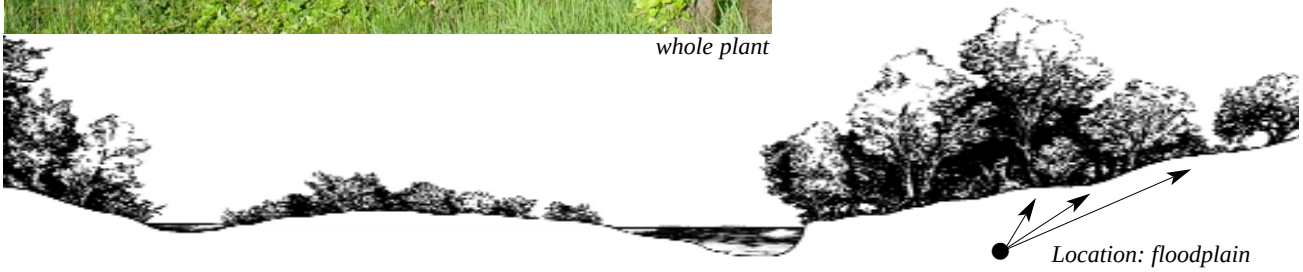
Fruit/Seed: Round berry, black, diameter <¼ inch.

Typical Location: Moist shady areas, elevations between sea level to 3,300 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Very similar to non-native Algerian ivy (not pictured), *H. canariensis*, although Algerian ivy has larger leaves (width 5-8 inches) that are more widely spaced.

Notes: Non-native, planted as soil stabilizing ground cover, introduced from Europe, highly invasive. Prevents native plant germination. Ground cover and vining behavior kill both understory and overstory native plants by shading. Harbors slugs, snail and rodents.



leaf

flower

whole plant

EUCALYPTUS GUM TREE

Species Name: *Eucalyptus* spp.
Family: Myrtaceae (myrtle family)
Plant Type: Exotic invasive tree

Description: Tree, tall and slender, height 30-150 feet, peeling bark, evergreen.

Leaf: Variable among species, always longer than wide (length 2-8 inches), leathery, usually lanceolate, edges smooth, pointed at tip, highly aromatic containing volatile oil.

Flower: Mostly spring/summer, sometimes through autumn, bisexual, cup-like receptacle contains flower, petals inconspicuous but stamen showy white, yellow, pink or red.

Fruit/Seed: Woody capsule, angular sides, flat top, contains many tiny seeds.

Typical Location: Disturbed areas; elevations below 1,000 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Native to Australia and imported as a wood source. Removal sometimes controversial because native wildlife, especially birds and Monarch butterfly, use tree for roosting or nesting. Allelopathic and shading effects result in reduced and inhibited native plant germination and growth. Thick leaf, bark and limb litter create fire hazard.

leaf

whole plant

flower

seed

FENNEL

Species Name: *Foeniculum vulgare*
Family: Apiaceae (carrot family)
Plant Type: Exotic invasive herb

Description: Perennial herb with large taproot, erect, solid stems, height 3-10 feet, woody dry stems with seed heads remain visible after winter die back, new leaves form from base in late winter. Entire plant has strong licorice or anise-like aroma.

Leaf: Large triangle leaf, finely divided into thread like sections.

Flower: May-September, bisexual, umbrella like clusters (width to 4 inches) with 15-40 rays containing clusters of small, yellow flowers.

Fruit/Seed: Oblong, ribbed, length 1/8 inch, seed face flat.

Typical Location: Streamsides, roadsides, disturbed areas; elevations sea level to 1,200 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Native to Europe, escaped from cultivation. Spreads rapidly and excludes native vegetation. Disturbed, open soil encourages establishment. Dispersal of seeds by water result in downstream invasions.

whole plant

flower

seed

whole plant in flower

Location: floodplain, channel

FLOATING PRIMROSE, WATER PRIMROSE

Species Name: *Ludwigia peploides/Ludwigia hexa-petala*
Family: Onagraceae (evening primrose family)
Plant Type: Exotic invasive emergent/aquatic

Description: Perennial herb, spreads by rooting nodes over stream edges and water forming floating mats (roots in water up to 18 inches deep, 10-15 feet from shore). Stems straight or branching, prostrate or erect, length 1-10 feet.

Leaf: Oblong to round, alternate, length to 2½ inches.

Flower: May-October, bisexual, showy, bright yellow, petal length to 1 inch. Flowers on stalks arising from leaf axis (point where leaf joins stem).

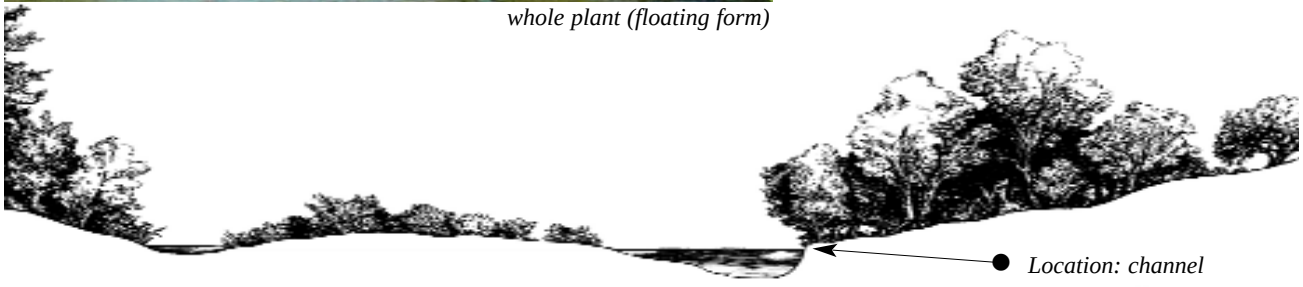
Fruit/Seed: Capsule, hard, long, cylindrical, 5-sided, with tiny seeds embedded in fruit walls.

Typical Location: Stream banks, ditches, ponds; elevations below 3,000 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Native to Southern U.S., cultivated as ornamental for landscaped ponds. Floating aquatic and emergent, depending on season and water level.

leaf and flower (erect fom)



flower

whole plant (floating form)

whole plant (floating form)

GIANT REED

Species Name: *Arundo donax*
Family: Poaceae (grass family)
Plant Type: Exotic invasive grass

Description: Many stemmed, dense clumps of cane or bamboo-like grass, stem hollow but divided by partitions at nodes (like bamboo), height 9-30 feet, spreads by rhizomes and rooting at nodes, semi-dormant in winter (turns brownish).

Leaf: Blade-like, flat, length to 3 feet, width to 2 inches at base, tapers to point at tip, alternate, arranged in a single plane (corn-like).

Flower: March-September, plumed terminal cluster, length 1-2 feet, brown or purple.

Fruit/Seed: No viable seed produced in North America.

Typical Location: Streamside, floodplains, drainages, ditches; elevations below 1,600 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Introduced from Asia and one of the greatest vegetative threats to the health of California's waterways. It is highly flammable, provides limited stream shading, and minimal habitat for native wildlife. Forms dense monocultures that may exclude native vegetation.

leaf

whole plant

node

whole plant

Location: floodplain, channel

HIMALAYAN BLACKBERRY

Species Name: *Rubus discolor*
Family: Rosaceae (rose family)
Plant Type: Exotic invasive vine

Description: Thicket forming, mound building (height to 10 feet or more), sprawling, vine-like, cane length to 20 feet, stems 5 angled, thorns large and curved, stem tips root.

Leaf: Compound with 5 leaflets, leaflet ovate, margins sharply toothed, length 2-4 inches.

Flower: April-June, clusters of white to pale pink flowers, petal length 1/2 inch.

Fruit/Seed: Blackberry (aggregate of black stone fruits), oblong, red ripening to black, highly edible, ripening in summer. Multiple small seeds inside single blackberry.

Typical Location: Common, disturbed moist areas, streamsides, roadsides, fencerows; elevations below 5,200 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Often confused with the native California blackberry (*R. ursinus*). Distinguished by leaf and thorn morphology.

Notes: The dense brambles choke out native vegetation and dominate the riparian forest floor. Thickets provide shelter and forage for wildlife, and erosion control. Removal requires revegetation with native vegetation. Pierce's Disease host plant (see page XI-7 for more information).

leaf

flower

seed

stem

whole plant

Location: floodplain, channel

PAMPAS GRASS

Species Name: *Cortaderia selloana*
Family: Poaceae (grass family)
Plant Type: Exotic invasive grass

Description: Perennial grass, dense clumps, height 6-14 feet, width 12 feet.

Leaf: Blades greenish-gray, width 1-3 inches, tapering at tip, sharp edges can cut.

Flower: Summer, dioecious (separate sex grasses) but can reproduce asexually, long stalks (length to 14 feet) with distinctive plum-like silvery flower head.

Fruit/Seed: Tiny seeds, wind dispersed, ripen in autumn.

Typical Location: Moist areas, disturbed sites, elevations below 1,000 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Ornamental brought from South America. Produces wind-born seeds asexually, results in rapid spread. Dominates landscape and excludes native vegetation.

Pampas grass

whole plant

seed

PEPPERWEED

Species Name: *Lepidium latifolium*
Family: Brassicaceae (mustard family)
Plant Type: Exotic invasive herb

Description: Perennial herb, erect, branching, height to 6 feet. Spreads by creeping roots (rhizomes) up to 10 feet from original plant. Dies back during winter months.

Leaf: Lanceolate, toothed or entire, waxy, distinctive white veins, lower leaves larger (length to 1 foot, width 2-3 inches) than upper leaves (width to 1 inch).

Flower: May-July, bisexual, dense clusters of tiny, white, 4 petaled flowers produced at stem tips.

Fruit/Seed: Round, pod-like, slightly hairy, diameter 1/12 inch, contains 2 tiny, reddish-brown seeds, spread by wind, water and possibly waterfowl.

Typical Location: Riparian areas/wetlands, roadsides, disturbed areas, saline soils; elevations below 6,200 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Flowers have 4 petals, a characteristic of the mustard family.

Notes: Native to Eurasia, accidentally brought to U.S. Successful competitor in riparian and wetland areas forming dense clusters that exclude native vegetation. Does not hold soil well resulting in streamside erosion. Reproduces and spreads by seeds and root fragments.

leaf

flower

whole plant

whole plant

Location: floodplain, channel

PERIWINKLE

Species Name: *Vinca major*
Family: Apocynaceae (dogbane family)
Plant Type: Exotic invasive vine

Description: Spreading, low growing, with erect flowering stems (height 9-20 inches) and trailing non-flowering stems (length to 6 feet), stems root at tips, deciduous. Stems produce milky latex if broken.

Leaf: Oval, tip pointed, opposite, length to 3 inches.

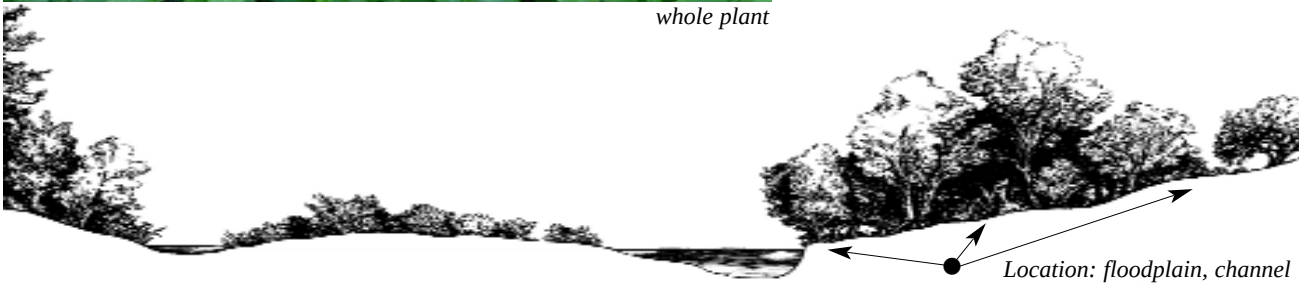
Flower: Spring-Summer, bisexual, single flowers, diameter 1-2 inches, light blue-purple, produced from leaf axis (point where leaf joins stem).

Fruit/Seed: Rarely produces viable seed in California.

Typical Location: Sheltered places, floodplains, streamsides usually escaped from cultivation; elevations below 650 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Native to Mediterranean region, commonly planted as ground cover. Low value to native wildlife and insects. The scientific name, Vinca, translates in Latin to "bind or conquer". Vinca lives up to its name with an aggressive, spreading growth that prevents native plants from becoming established. Pierce's Disease host plant (see page XI-7 for more information).



leaf and flower

flower

whole plant

Location: floodplain, channel

POISON HEMLOCK

Species Name: *Conium maculatum*
Family: Apiaceae (carrot family)
Plant Type: Exotic invasive herb

Description: Perennial herb, erect, branched, stems hollow, generally purple spotted/striped, height 2-10 feet, taproot solid, whitish, parsnip like. Plant gives off unpleasant "mouse-like" odor when bruised.

Leaf: Compound, length 2-12 inches. Leaflets very small, finely divided, delicate.

Flower: May-September, bisexual, umbrella like clusters (width 1-2 inches) with 5-15 rays containing clusters of small, white flowers.

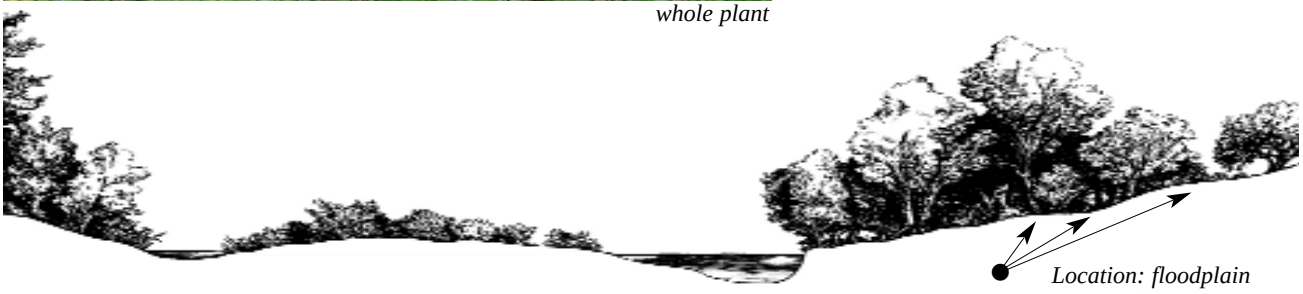
Fruit/Seed: Round to ovate, sides ribbed, diameter <¼ inch.

Typical Location: Wet areas; elevations below 3,200 feet.

Revegetation Approach: Do not plant in riparian areas!

Notes: Native to Europe. Very toxic if eaten, all parts (leaves, seeds, roots) contain high levels of conine and related pyridine-type alkaloids. The Greek philosopher Socrates was executed by drinking prepared poison hemlock. May have allelopathic effects that suppress germination of native plants.

leaf



flower

whole plant

seed

TAMARISK
SALT CEDAR

Species Name: *Tamarix* spp.
Family: Tamaricaceae (tamarisk family)
Plant Type: Exotic invasive shrub

Description: Shrub or small tree, thin, narrow crown, height to 26 feet, branches jointed and often drooping, deep taproot, spreads extensively by rhizomatous roots, deciduous.

Leaf: Scale-like, tiny (length to <¼ inch), overlap, can excrete salt.

Flower: March-September, small cluster (length to 2 inches) of small, pink, short- petaled (length to ¼ inch) flowers, insect pollinated, highly fecund.

Fruit/Seed: Seeds tiny, tuft of hair at one end, spread by wind and water.

Typical Location: Floodplains, riverbanks, ditches, marshes; elevations below 2,600 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Native to Asia. Invades wet areas especially after human disturbance, requires great quantities of water, can lower water table. Spreads by seed, rhizomes and re-rooting of fractured root fragment. Accumulates salt in leaves, falling leaves may result in accumulation of salt in topsoil. May be long lived (50-100 years). Excludes native vegetation, provides little value to native wildlife and insects, and may change soil and water conditions.

leaf and seed

flower

seed

whole plant in flower

whole plant

Location: floodplain, channel

TEASEL

Species Name: *Dipsacus fullonum*
Family: Dipsacaceae (teasel family)
Plant Type: Exotic invasive herb

Description: Biannual herb/small shrub, stems branched, armed with thorns, height to 6 feet.

Leaf: In pairs, partially fused around stem, toothed.

Flower: Early spring to late autumn, bisexual, flower head egg-shaped, spiny. Flowers small, lavender-white, appear in rows around head.

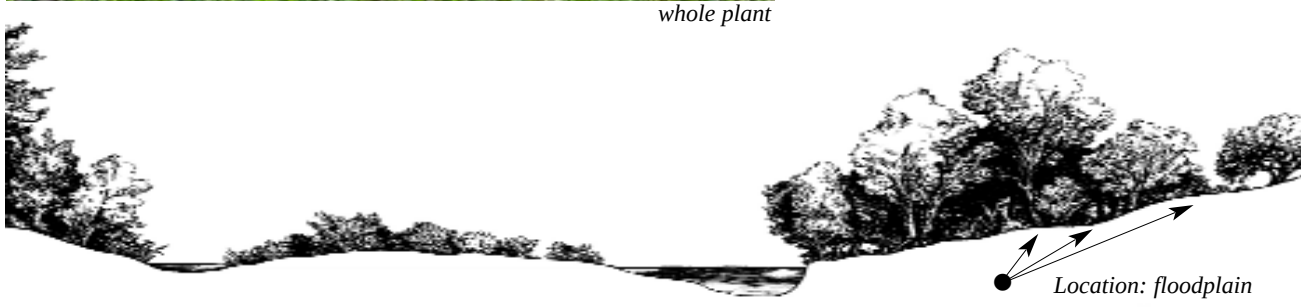
Fruit/Seed: Achene, hairy, box-like, length ¼ inch.

Typical Location: Roadsides, pastures, moist sites; elevations below 5,600 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Distinctive bristly dried flower heads persist through winter.

Notes: Native to Europe. Imported in 19th century and grown for the bristly flower head. The dried flower head was used to brush woolen fabrics to bring up the nap.



whole plant

flower

whole plant

TREE OF HEAVEN

Species Name: *Ailanthus altissima*
Family: Simaroubaceae (quassia or simarouba family)
Plant Type: Exotic invasive tree

Description: Tree, bark gray-brown and thin, height to 65 feet, fast growing, often grows in clumps, deciduous.

Leaf: Compound, length 1-3 feet, with 13-25 leaflets. Leaflets lanceolate, margins with few teeth, pointed at tip, length 3-5 inches, produce a bad smell when crushed.

Flower: April-July, dioecious (separate sex trees), occasionally bisexual, female and male flowers similar, non-descript, yellow-green. Flowers grow in 3-8 inch clusters. Male flowers have unpleasant odor.

Fruit/Seed: Winged achene, green-yellow or showy orange-red, seed at center, length 2 inches, wind dispersed, female trees produce large quantities, ripen September-October.

Typical Location: Disturbed areas, roadsides, tolerant of pollution; elevations below 4,100 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Key Notes: Young plants sometimes confused with the native black walnut (*Juglans californica*). Seeds, flowers or careful inspection of leaf characteristics distinguish between species.

Notes: Brought to California from Asia during the gold rush era. Highly invasive, grows rapidly and spreads both vegetatively and by seed.

leaf

whole plant

flower

seed

YELLOW STAR THISTLE

Species Name: *Centaurea solstitialis*
Family: Asteraceae (sunflower family)
Plant Type: Exotic invasive herb

Description: Annual, early spring growth from taproot, green, low to ground; in late spring through autumn the plant bolts to become stiff branched, bluish-green, develops stem leaves and flowers, height to over 3 feet.

Leaf: Lower leaves lobed, length 2-6 inches, bristly, lost before flowering; upper leaves not lobed, narrow, leaf ridge extends down stem past point of attachment (winged appearance), bluish-green, length to over 1 inch.

Flower: May-December, numerous, solitary, ovoid flower head with long spines (length to 1 inch), bright yellow, can have 2 flowering seasons per year (spring then autumn).

Fruit/Seed: Achene, 2 types, outer seedhead achenes are dark brown, inner are light brown with tiny bristles.

Typical Location: Pastures, roadsides, grasslands, woodlands, disturbed areas; elevations below 4,200 feet.

Revegetation Approach: Do not plant in riparian areas! Remove where feasible.

Notes: Introduced from southern Europe, believed to be accidentally moved with livestock feed. Considered one of the western United States' most noxious weeds. Displaces native plants and animals, and reduces soil moisture reserves in grasslands. Long spines limit access to recreational areas. Reduces land value, poisonous to horses and poor forage for livestock.

COMMENTS TO REQUEST FOR REVIEW FOR THE NOTICE OF PREPARATION FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, SUNRISE TOMORROW SPECIFIC PLAN PROJECT, SCH#2020080098, SACRAMENTO COUNTY

Pursuant to the State Clearinghouse's 7 August 2020 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Notice of Preparation for the Draft Environmental Impact Report* for the Sunrise Tomorrow Specific Plan Project, located in Sacramento County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

Central Valley Water Board staff recommends:

- Including a Clean Water Act Section 401 Water Quality Certification and/or Waste Discharge Requirement permit to the list of potential permits required for the proposed project.
- Noting that a Clean Water Act Section 401 Water Quality Certification and/or Waste Discharge Requirement permit may be required for the proposed creek restoration and habitat creation in Response c) of the Biological Resources section on page 50.
- Including information of the permits listed below into the Hydrology and Water Quality section of the EIR.

Central Valley Water Board staff is unable to provide additional comments on the Hydrology and Water Quality section of the EIR at this time due to lack of information provided in the section.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne

Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases, the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues. For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

Antidegradation Considerations

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at:
https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.

This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), Construction General Permit Order No. 2009-0009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). For more information on the Construction General Permit, visit the State Water Resources Control Board website at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits[1]

The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the

[1] Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements. If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications. For more information on the Water Quality Certification, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

Waste Discharge Requirements – Discharges to Waters of the State

If USACE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation. For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at:https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Projects involving excavation or fill activities impacting less than 0.2 acre or 400 linear feet of non-jurisdictional waters of the state and projects involving dredging activities impacting less than 50 cubic yards of non-jurisdictional waters of the state may be eligible for coverage under the State Water Resources Control Board Water Quality Order No. 2004-0004-DWQ (General Order 2004-0004). For more information on the General Order 2004-0004, visit the State Water Resources Control Board website at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2004/wqo/wqo2004-0004.pdf

Dewatering Permit

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Threat General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Threat Waiver) R5-2018-0085. Small temporary construction

dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at: http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Threat Waiver and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2018-0085.pdf

Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order. For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

NPDES Permit

If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit. For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/help/permit/

If you have questions regarding these comments, please contact me at (916) 464-4812 or Jordan.Hensley@waterboards.ca.gov.

NOTICE OF PREPARATION OF ENVIRONMENTAL IMPACT REPORT FOR SUNRISE TOMORROW SPECIFIC PLAN – DATED AUGUST 2020 (STATE CLEARINGHOUSE NUMBER: 2020080098)

Mr. Kempenaar:

The Department of Toxic Substances Control (DTSC) received a Notice of Preparation of an Environmental Impact Report (EIR) for the Sunrise Tomorrow Specific Plan (Project). The Lead Agency is receiving this notice from DTSC because the Project includes one or more of the following: groundbreaking activities, work in close proximity to a roadway, work in close proximity to mining or suspected mining or former mining activities, presence of site buildings that may require demolition or modifications, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site.

DTSC recommends that the following issues be evaluated in the EIR. Hazards and Hazardous Materials section:

1. The EIR should acknowledge the potential for historic or future activities on or near the project site to result in the release of hazardous wastes/substances on the project site. In instances in which releases have occurred or may occur, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.
2. Refiners in the United States started adding lead compounds to gasoline in the 1920s in order to boost octane levels and improve engine performance. This practice did not officially end until 1992 when lead was banned as a fuel additive

in California. Tailpipe emissions from automobiles using leaded gasoline contained lead and resulted in aerially deposited lead (ADL) being deposited in and along roadways throughout the state. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. Due to the potential for ADL-contaminated soil DTSC, recommends collecting soil samples for lead analysis prior to performing any intrusive activities for the project described in the EIR.

3. If any sites within the project area or sites located within the vicinity of the project have been used or are suspected of having been used for mining activities, proper investigation for mine waste should be discussed in the EIR. DTSC recommends that any project sites with current and/or former mining operations onsite or in the project site area should be evaluated for mine waste according to DTSC's 1998 Abandoned Mine Land Mines Preliminary Assessment Handbook (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/11/aml_handbook.pdf).

4. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with DTSC's 2006 *Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers* (https://dtsc.ca.gov/wpcontent/uploads/sites/31/2018/09/Guidance_Lead_Contamination_050118.pdf).

5. If any projects initiated as part of the proposed project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to *DTSC's 2001 Information Advisory Clean Imported Fill Material* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/SMP_FS_Cleanfill-Schools.pdf).

6. If any sites included as part of the proposed project have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 *Interim Guidance for Sampling Agricultural Properties (Third Revision)* (https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/Ag-Guidance-Rev-3-August-7-2008-2.pdf).

DTSC appreciates the opportunity to comment on the EIR. Should you need any assistance with an environmental investigation, please submit a request for Lead

Agency Oversight Application, which can be found at: https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/09/VCP_App-1460.doc. Additional information regarding voluntary agreements with DTSC can be found at: https://dtsc.ca.gov/brownfields/.

If you have any questions, please contact me at (916) 255-3710 or via email at Gavin.McCreary@dtsc.ca.gov.

Re: 2020080098, Sunrise Tomorrow Specific Plan Project, Sacramento County

Dear Mr. Kempenaar:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Nancy.Gonzalez-Lopez@nahc.ca.gov.

Casey Kempenaar, Planning Manager
City of Citrus Heights
6360 Fountain Square Drive
Citrus Heights, CA 95621

RE: Notice of Preparation of an Environmental Impact Report for the Sunrise Tomorrow Specific Plan

Dear Mr. Kempenaar:

Thank you for providing the Notice of Preparation of an Environmental Impact Report (EIR) for the Sunrise Tomorrow Specific Plan to the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) for review. The project would include adoption of the Sunrise Tomorrow Specific Plan, including the proposed Specific Plan land use map. The Specific Plan also includes a circulation and open space network to support the future land uses. The Sac Metro Air District reviews and provides comments through the lead agency planning, environmental and entitlement processes with the goal of reducing adverse air quality impacts and ensuring compliance with the California Environmental Quality Act (CEQA). Our comments follow.

In the Sunrise Tomorrow Specific Plan, the City has taken a bold step in requiring long-term planning for this shopping mall renovation project. We acknowledge and appreciate the City's efforts to create long-term, visionary, and sustainable development in the City core through the development and implementation of the Sunrise Tomorrow Specific Plan.

Consistency with Existing Plans

The Sac Metro Air Districts requests that you evaluate the Specific Plan's consistency with and furthering of existing plans, especially those that reduce criteria air pollutants and greenhouse gases (GHGs). Such plans include, but are not limited to, SACOG's Metropolitan Transportation Plan/Sustainable Communities Strategy, the California Air Resources Board's Climate Change Scoping Plan, the City's Greenhouse Gas Reduction Plan, and the City's Bikeway Master Plan, Pedestrian Master Plan, and Urban Forest Master Plan.

Air Quality Impacts

The NOP states that the impacts of the plan on air quality will be analyzed. Please examine the types and levels of emissions generated by the Specific Plan, the existing air quality conditions, and neighboring land uses. Analyze the impact of the Specific Plan on emissions of particulate matter, ozone precursors, nitrogen oxides (NOx), and reactive organic gases (ROG), and on associated health outcomes. Tools for analysis of health outcomes are available in the Sac Metro Air District's Guidance to Address the Friant Ranch Ruling for CEQA Documents in the Sac Metro Air District. All phases of the project planning, construction and operation, as well as cumulative impacts, should be studied. Please see our CEQA Guidance and Tools, which provides direction on analyzing topics such as emissions

of particulate matter, ozone precursors, NOx and ROG. Included are thresholds of significance for particulate matter and other criteria pollutants.

Please consider the potential for diesel particulate matter (DPM) emissions from idling diesel trucks and transportation refrigeration units making deliveries within the Plan area. Consider methods for reducing DPM exposure of residents, employees, and visitors to the Plan area with the installation of electrical hookups for delivery trucks, which give truck operators the ability to shut off their main engines during the unloading process and maintain power to the refrigeration systems in the trucks. These electrical hookups can achieve substantial reductions in particulate matter emissions. The District recommends that, in addition, signs prohibiting idling more than 5 minutes be posted in the loading areas.

In addition, evaluate the potential reduction in DPM exposure of residents, employees, and visitors by adding more trees and shrubs around loading dock areas. The complex and porous structure of certain trees and bushes can reduce concentrations of pollutants through the interception of airborne particles or through the uptake of gaseous air pollution via leaf stomata on the plant surface, or through altering air flow. The Sac Metro Air District's guidebook Landscaping Guidance for Improving Air Quality near Roadways provides lists of regionally-appropriate tree and shrub species that can help reduce exposure to particle pollution and toxic air contaminants.

Climate Change – Greenhouse Gas Reduction Plan

The NOP states that the impacts of the plan on greenhouse gas (GHG) emissions will be analyzed. Please examine the types and levels of GHG emissions generated by the Specific Plan and neighboring land uses. All phases of the project planning, construction and operation, as well as cumulative impacts, should be studied. Please see our CEQA Guidance and Tools for direction on analyzing greenhouse gas emissions. You may wish to use the Sac Metro Air District's Greenhouse Gas Thresholds for Sacramento County thresholds of significance for GHG emissions in order to determine significance.

As part of an evaluation of greenhouse gas emissions, please investigate, as a method of reducing greenhouse gas emissions, the feasibility of installing all-electric appliances and eliminating any natural gas connections to all new buildings. Please also evaluate the ability of tree canopy in the Plan area to sequester carbon.

Climate Change Adaptation and Resilience

Please evaluate the effect of the Specific Plan on climate resilience and adaptation, considering climate impacts that the City of Citrus Heights will likely face in 2040 and 2050. The Sac Metro Air District has recently concluded a two-year study of the impact of the urban heat island effect on the Sacramento region. According to the Capital Region Transportation Sector Urban Heat Island Mitigation Project (UHI Project), the city of Citrus Heights has one of the highest UHI risks in the region, and one of the most likely impacts of climate change that the City of Citrus Heights will face will be extreme heat. The City is projected to experience, on average, 40 days over 100F and six heat waves annually by 2040 to 2060. The average length of a heat wave will also more than double, from 4 days to 11. Higher ambient temperatures increase formation of ozone, a respiratory system irritant. During extreme heat and extended heat waves, these higher temperatures can lead to heat stress, heat stroke, and even heat mortality, especially for the elderly, the young, and those with pre-existing health conditions. The Sunrise Tomorrow Specific Plan could, if appropriate

measures are incorporated, help to reduce heat island effect and resident/employee/visitor heat exposure. The use of cool roofs, tree shading, and cool and light-colored pavements can help to lower building energy use, cool ambient air temperatures, and protect public health, including for pedestrians and cyclists. The Sac Metro Air District recommends that the City analyze the impact of scenarios of deploying cool roofs and cool pavements on the urban heat island effect.

We also recommend that the City evaluate tree canopy and vegetation cover for potential mitigation of urban heat island effect. Urban trees also improve air quality by absorbing gaseous pollutants such as ozone and nitrogen dioxide, intercepting particulate matter, and increasing oxygen levels through photosynthesis. Shaded parking spaces help reduce emissions of volatile organic compounds – ozone precursors – from conventional, internal combustion engine vehicles by as much as 20 percent. Other benefits of tree canopy include reduced energy use, reduced storm water runoff, carbon sequestration, and improved property values. Studies have correlated neighborhood tree shade to increased use of active transportation.[1] In places where planting additional trees is not feasible, vegetation cover as a replacement for impermeable surfaces can also contribute to reducing urban heat island effect.

Transportation

Examine vehicle miles traveled (VMT) and associated air quality impacts, including induced VMT, and any impacts that may result outside of Specific Plan boundaries. Analysis should include VMT quantification and all associated model runs, and should evaluate VMT against a threshold of significance. For guidance, we recommend referring to the California Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA (Dec. 2018).

A Sacramento Regional Transit Center is located in the Plan area. Please analyze the impact of the Specific Plan on transit use, walking and biking. As part of the analysis, consider increased heat as a barrier to active transportation and mitigation measures such as tree canopy that the City can incorporate to encourage walking and biking. Analyze how Plan policies, for example, parking policies and strategies, may support active transportation modes and reduce motor vehicle emissions.

Thank you for your consideration of these comments. If you have any questions, please contact me at 916-874-4816 or tduarte@airquality.org.

Sincerely,

Teri Duarte

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 1 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

3.0 Construction Detail

Construction Phase

Citrus Heights Sunrise Tomorrow SP (Construction Phase 1) - Sacramento County, Annual

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	1/1/2021	1/28/2021	5	20	
2	Site Preparation	Site Preparation	1/29/2021	2/11/2021	5	10	
3	Building Construction	Building Construction	3/12/2021	5/5/2025	5	1082	
4	Paving	Paving	2/12/2021	3/11/2021	5	20	
5	Architectural Coating	Architectural Coating	9/12/2021	12/31/2025	5	1123	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 0

Acres of Paving: 0

Residential Indoor: 609,525; Residential Outdoor: 203,175; Non-Residential Indoor: 690,417; Non-Residential Outdoor: 230,139; Striped Parking Area: 0 (Architectural Coating – sqft)

OffRoad Equipment

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 1 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 1 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 2 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Citrus Heights Sunrise Tomorrow SP (Construction Phase 2) - Sacramento County, Annual

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 2 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Citrus Heights Sunrise Tomorrow SP (Construction Phase 2) - Sacramento County, Summer

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 2 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Citrus Heights Sunrise Tomorrow SP (Construction Phase 2) - Sacramento County, Winter

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Construction - Phase 3 modelled only.

Land Use - Land uses reflect Projected Development Scenario.

Construction Phase - Construction schedule estimated based on project characteristics.

Demolition - Demolition of 281,250 sf of existing building.

Grading - Project site is currently graded; no soil impact or export.

Vehicle Trips - Vehicle trips incorporated to reflect the "Net Increase in Trips" provided by Fehr & Peers for the 'Projected Development Scenario'.

Woodstoves -

Consumer Products - CARB total statewide year 2016 ROG emissions is 208.71 tons/year, 12.89% less than the amount estimated for 2008 (239.6 tons/year). General Category consumer projects emissions factor adjusted to reflect.

Area Coating - Interior coatings were reduced from 100 g/L to 50 g/L, based on SMAQMD Rule 442 that limits VOC of 50 g/L for flat coatings.

Energy Use -

Construction Off-road Equipment Mitigation - Construction mitigation: Water Exposed Area 2x daily; Clean Paved Road (9% fugitive dust PM reduction); Unpaved road mitigation: Limit on-site construction vehicle speeds to 15 mph.

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Citrus Heights Sunrise Tomorrow SP (Construction Phase 3) - Sacramento County, Annual
