Subject: INITIAL SITE ASSESSMENT REPORT
ARCADE CRIPPLE CREEK TRAIL - SYLVAN TO STOCK RANCH EXTENSION PROJECT
CITRUS HEIGHTS, SACRAMENTO COUNTY, CALIFORNIA

Mr. Kehrer:

In accordance with the *Standard Agreement for Professional Services,* executed on December 31, 2025, between Dokken Engineering (Dokken, the Client) and Geocon Consultants, Inc. (Geocon), we performed an Initial Site Assessment (ISA) of the proposed Arcade Cripple Creek Trail (ACCT) - Sylvan to Stock Ranch Extension Project (the Project Area) in Citrus Heights, California. The enclosed report describes the ISA and presents our findings, opinions, and conclusions.

We performed the ISA for Dokken on behalf of the City of Citrus Heights (the City), to assess the Project Area for the potential presence of recognized environmental conditions as defined by the American Society for Testing and Materials *Designation E 1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

We appreciate the opportunity to have performed this ISA for Dokken on behalf of the City of Citrus Heights. Please contact us if you have any questions concerning the report and our findings or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

INITIAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon Consultants, Inc. (Geocon) has performed an Initial Site Assessment (ISA) of the proposed Arcade Cripple Creek Trail (ACCT) - Sylvan to Stock Ranch Extension Project (the Project Area) in Citrus Heights, California. We performed the ISA for Dokken Engineering (Dokken, the Client) on behalf of the City of Citrus Heights (the City) to assess the Project Area for the potential presence of recognized environmental conditions (REC), as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-21 – Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* prior to proceeding with construction of the ACCT.

This report describes the ISA methodology and presents our findings, opinions, and conclusions. The report is organized as follows:

- Section 1.0 provides a description of the purpose and objectives of the ISA, defines terms, and describes the ISA services, limitations, and identified data gaps;
- Section 2.0 describes the Project Area's physical setting and conditions;
- Section 3.0 summarizes readily available records for the Project Area and surrounding properties that we obtained from regulatory and administrative agencies and other sources;
- Section 4.0 describes the historical use of the Project Area and surrounding area ascertained from historical records and information sources;
- Section 5.0 describes the Project Area and surrounding properties and facilities from our observations during the Project Area reconnaissance;
- Section 6.0 presents our findings and conclusions regarding RECs and recommendations for further environmental assessment, if any;
- Section 7.0 lists the references cited in this ISA report; and
- Section 8.0 provides a qualifications statement from the environmental professional responsible for the ISA and report.

1.1 Purpose and Definitions

Dokken requested this ISA to determine the potential presence of environmental concerns and contaminated properties within or in the vicinity of the Project Area that may impact construction of the proposed trail improvements. The ISA was performed in general accordance with *Caltrans Initial Site Assessment Guidance Document* (Geomatrix, 2006) and project-specific scoping.

The purpose of the ISA was to identify evidence or indications of RECs, or other qualified RECs, at the Project Area as defined by the ASTM *Designation E 1527-21*. ASTM *Designation E 1527-21* defines an REC as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition." De minimis conditions are further described as "a condition related to a release that generally does not present a threat to human health or the environment and generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."

"Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e., the ground surface, soil, soil vapor, groundwater, or surface water on the site. De minimis conditions are further described as "a condition related to a release that generally does not present a threat to human health or the environment and generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."

ASTM *Designation E1527-21* also defines "historical" and "controlled" RECs (HREC and CREC, respectively). An HREC is defined as "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)." A CREC is defined as "recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)." An HREC is generally not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

We define a "potential environmental concern" as a past use of the Project Area or adjoining or adjacent property that may have involved the use, storage, and/or release of hazardous substances or petroleum products that could have impacted the Project Area, but for which there are no records or other information to confirm that use, storage, or release. An example would be the possible application of pesticides to an agricultural field (i.e., irrigated row crop or orchard), but for which there are no records of such application or confirmation from a knowledgeable person (i.e., Project Area owner/occupant/operator) that pesticides were used.

As of July 8, 2024, the United States Environmental Protection Agency (EPA) has designated two types of per- and polyfluoroalkyl substances (PFAS) as hazardous substances under CERCLA. PFAS has been used since the 1940s for use in or manufacturing of a wide range of industrial and consumer products, including but not limited to clothing, carpets, fabrics, food packaging, cookware, and firefighting foams. Due to their persistent and versatile properties, PFAS have become so widespread that they are now commonly found in a broad array of products and environmental settings. The EPA's PFAS Enforcement and Compliance History Online (ECHO) database, one of the PFAS databases that we reviewed as part of this assessment, tracks industry sectors that potentially handle or release PFAS. Enforcement is designed to target those entities that are significantly contributing to PFAS pollution, such as manufacturers, industrial users, and federal facilities. Given the pervasive presence of PFAS, consultants could identify PFAS-related RECs in nearly every Phase I ESA. This practice would undoubtedly raise concerns for lenders, buyers, and sellers, potentially complicating or even terminating real estate transactions. Additionally, it presents challenges for consultants in recommending, conducting, and evaluating PFAS-related assessments (i.e., Phase II ESAs) that may not be necessary or required. Therefore, for purposes of this assessment, we will rely on cited resources (such as federal, state, and local regulatory databases and records and Client-provided and site owner[s] information about site use) to evaluate whether the site and/or a nearby property has been involved in the manufacturing, use, storage, treatment, transportation, or disposal of PFAS.

The Code of Federal Regulations (CFR) *Standards and Practices for All Appropriate Inquiries* (AAI; CFR Title 40, Part 312) identifies ASTM *Designation E 1527-21* as an acceptable guidance document for performing a Phase I ESA (and updates) that satisfies the federal requirements for AAI under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of AAI is to meet some of the requirements to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E 1527-21*:

- "**Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a subject property, and this practice recognizes reasonable limits of time and cost."

- "**Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."

- "**Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary standards and practices as defined at 42 U.S.C. § 9601(35)(B), the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, future intended uses of the subject property disclosed to the environmental professional, and the information developed in the course of the inquiry."

- **"Comparison with Subsequent Inquiry** - It should not be concluded or assumed that an inquiry was not all appropriate inquiries merely because the inquiry did not identify recognized environmental conditions in connection with a subject property. Environmental site assessments must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent environmental site assessments should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors."

- **"Point in Time** - The environmental site assessment is based upon conditions at the time of completion of the individual environmental site assessment elements."

1.2 Scope of Services

Geocon's Proposal SA-25-0350-P-GT, dated May 13, 2025 (revised May 18, 2025), describes our ISA services. We performed the scope of services outlined in the proposal. The main components of the ISA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed various references to obtain information concerning the topographic, geologic, and hydrologic/hydrogeologic characteristics of the Project Area and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could be transported in the event of a spill or release on or near the Project Area.

- **Records Review:** We reviewed publicly available federal, state, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Project Area.

- **Project Area History:** We reviewed historical information sources to assess previous uses of the Project Area and surrounding area and identify those that could have led to RECs on the Project Area. Those information sources included historical aerial photographs and topographic maps, and city directories.

- **Project Area Reconnaissance:** We performed a reconnaissance to observe Project Area uses and conditions for evidence or indications of RECs. We viewed adjoining and adjacent offsite properties and features solely from the vantage of the Project Area and public thoroughfares.

1.3 Report Limitations

We prepared this ISA report exclusively for Dokken and the City. The information obtained is only relevant for the latest of the dates of the records reviewed, the latest Project Area visit, and completion of interviews with governmental officials and/or Project Area owner(s), occupant(s), and/or operator(s) as cited in Section 1.2.

Dokken and the City should recognize that an ISA is not a comprehensive Project Area characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the Project Area reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Project Area, as presented in this report. Dokken and the City should also understand that we did not assess the Project Area for wetlands or perform testing (sample collection and analysis) for asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury, methane, mold, or potential naturally occurring hazards such as asbestos and arsenic as part of this ISA. The ISA did not include sample collection and laboratory analysis, nor did it include the evaluation of regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, air quality, or geologic hazards.

The information provided in this report is not meant to eliminate the risk involved in property transactions. No guarantee or warranty of the results of the ISA is implied within the intent of this report or any subsequent reports, correspondence, or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

2.0 PROJECT AREA DESCRIPTION

This section describes the location and physical characteristics of the Project Area including its size, topography, and geologic, soil, hydrologic, and hydrogeologic conditions.

2.1 Location and Legal Description

The Project Area is located approximately 2,000 feet south of the intersection of Auburn Boulevard and Sylvan Road in Citrus Heights, California (Figure 1).

Within the Public Land Survey System of California, the Project Area is in the southwest quarter of Section 26, Township 10 North, Range 6 East, Mount Diablo Base and Meridian.

2.2 Project Area and Vicinity General Characteristics

The Project Area is in a suburban area surrounded by residential and commercial properties. The Project Area includes portions of the Stock Ranch Nature Preserve, Huntington Square Apartments, Sylvan Road, and Stock Ranch Commercial Center (Figure 2).

2.2.1 Topography

The topography of the Project Area is relatively flat-lying with an overall gentle downward slope toward Arcade Creek. Elevations at the Project Area range from approximately 125 feet above mean sea level (MSL) to 140 feet above MSL (USGS, 2023).

2.2.2 Geologic Conditions

We obtained geologic information regarding the Project Area from a variety of sources including:

- *California Geology* (Harden, 2003),
- *Note 36, California Geomorphic Provinces* (California Geological Survey [CGS], 2002), and
- *Preliminary Geologic Map of the Sacramento 30' x 60' Quadrangle, California* (CGS, 2011).

Following are summaries of pertinent information obtained.

2.2.2.1 Geomorphic Region

The Project Area is located in the Great Valley geomorphic province of California. The Great Valley is a sedimentary basin between the Sierra Nevada mountains and Cascade Range to the east and the Coast Ranges to the west. The Great Valley is filled with a thick sequence of Jurassic- to Recent-age sedimentary deposits of both continental and marine origin (CGS, 2002 and Harden, 2003).

2.2.2.2 Geologic Formations/Stratigraphy

The Project Area is underlain by the Turlock Lake Formation (Pleistocene; Map ID= Qtl) which consists of arkosic alluvium with some silt and minor gravel (CGS, 2011).

2.2.3 Soil Conditions

The United States Department of Agriculture – Natural Resources Conservation Web Soil Survey (http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx) indicates that surficial soil at the Project Area is classified as Fiddyment-Orangevale complex which is fine sandy loam to loam to sandy clay loam weathered from alluvium derived from igneous and metamorphic rock.

2.2.4 Hydrologic and Hydrogeologic Conditions

Arcade Creek is present along the southern portion of the Project Area and flows southeast, towards Lake Natoma.

The California Department of Water Resources (DWR) Sustainable Groundwater Management Act *Data Viewer* website (https://sgma.water.ca.gov) shows no wells within the Project Area or vicinity. The *Data Viewer* groundwater depth contour map for Spring 2025 indicates that depth to groundwater is likely between 120 and 140 feet, and that groundwater flow is to the southeast.

2.3 Current and Planned Uses of the Project Area

The Project Area is primarily used for outdoor recreation with numerous paved and unpaved trails along the Arcade Creek riparian area.

The city proposes to construct a 0.5-mile addition to the planned 16-mile Creek Corridor Trail Project (CCTP) as part of the Arcade-Cripple Creek Trail - Sylvan to Stock Ranch Extension Project. The Project Area will extend east from the existing Stock Ranch Trail behind the

Costco/Walmart shopping center to Sylvan Road. The proposed alignment begins south of the Walmart property boundary and proceeds east through the Stock Ranch Nature Preserve, curving south around Walmart's water quality detention basin. The alignment continues north, crossing a tributary of Arcade Creek, and traverses along the south side of the Huntington Square Apartments complex prior to connecting to Sylvan Road. The alignment terminates east of Sylvan Road at the location of a planned future trail extension segment from Sylvan Road to Mariposa Avenue. The project has independent utility and would function as a stand-alone improvement.

Proposed facilities include a paved trail, a new prefabricated bridge across the unnamed creek tributary, solar lighting, bank protection along a segment of Arcade Creek, and an at-grade signalized pedestrian crossing at Sylvan Road. Construction activities will involve grading to achieve ADA-compliant slopes, installing the creek crossing, paving the trail, erecting the solar lighting, constructing bank protection, and adding pedestrian signal infrastructure with minor utility adjustments as needed.

The Project Area and proposed improvements will be constructed within portions of the following Sacramento County assessor's parcel numbers (APNs): 211-0870-001, 211-0870-002, 211-0870-013, 211-0270-008, 211-0280-004, 211-0870-014, and 211-0850-039.

To accommodate construction, right-of-way (ROW) acquisitions will be required from several parcels. These include a permanent easement and permit to enter (PTE) from the Sunrise Recreation & Park District and a temporary construction easement (TCE) from Walmart. An existing trail easement exists across the Huntington Square Apartments property and there is potential for this permanent easement to be modified to best incorporate the trail alignment with the physical site features.

Construction access will be provided primarily through the Walmart parking lot under a TCE, as well as a PTE for access from the Huntington Square Apartments parcel. These provisions will allow safe and efficient construction of the trail and its associated improvements. A copy of the project plan is in Appendix A.

2.4 Current Uses of Adjoining Properties

Stock Ranch Commercial Center, including Costco and Walmart, is located on the north adjoining property. Residential neighborhoods are present on the north, east, south, and west adjoining properties. The south adjoining property includes Stock Ranch Nature Preserve and recreational trails.

3.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Project Area and properties and facilities in the vicinity of the Project Area.

3.1 Standard Environmental Record Sources

EDR searched federal, state, and local environmental databases for the Project Area and properties/facilities within one mile of the Project Area. The following table shows the databases that list the Project Area and/or offsite properties/facilities and the total number of listed properties/facilities for each database. Databases that list no properties/facilities within one mile of the Project Area are not included in the table. A copy of *The EDR Radius Map Report with GeoCheck*, (radius report) dated January 14, 2026, is in Appendix B.

3.1.1 Project Area

The Project Area is listed on two non-release-related databases[1] for a construction project that was terminated in 2024. These listings do not indicate the release or storage of hazardous materials and therefore, are unlikely to have caused an REC within the Project Area.

3.1.2 Offsite Properties

Three properties within $^1/_8$ mile of the Project Area are listed on various non-release-related databases. No properties within ¼ mile of the Project Area are listed on release-related databases, however two properties within approximately 300 feet of the Project Area are listed as hazardous waste generators (Walmart #3712) and Costco (#771). The UST Finder database indicates that four USTs are present (three 20,000-gallon tanks and one 1,500-gallon tank) at the Costco Gas Station upgradient of the Project Area. Since no releases have been reported, these two properties are unlikely to have caused an REC within the Project Area.

3.2 Orphan Summary

EDR's Orphan Summary identifies properties and facilities that have incomplete address information and therefore could not be accurately plotted. The Orphan Summary does not list any properties or facilities.

3.3 Other Environmental Record Sources

3.3.1 GeoTracker and EnviroStor

We reviewed information available on the California State Water Resources Control Board's (SWRCB) GeoTracker (http://geotracker.waterboards.ca.gov) and the California Department of Toxic Substances Control's (DTSC) EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) online data management systems for information regarding documented environmental assessment and cleanup at the Project Area and/or properties/facilities within 1/8 mile of the Project Area. No information pertaining to the Project Area or properties/facilities within the vicinity of the Project Area is available on GeoTracker or EnviroStor.

[1] "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

3.3.2 California Geologic Energy Management Division

The California Geologic Energy Management Division's (CalGEM) Well Finder, (https://maps.conservation.ca.gov/doggr/wellfinder/#openModal) an online petroleum (oil and natural gas) field and well mapping system, does not depict any oil or natural gas wells within the Project Area or its vicinity.

3.3.3 National Pipeline Mapping System

The United States Department of Transportation's (USDOT) National Pipeline Mapping System Public Map Viewer (https://pvnpms.phmsa.dot.gov/PublicViewer/), an online pipeline mapping system, does not depict any natural gas or liquid petroleum pipelines on or within ¼ mile of the Project Area (USDOT, 2025).

4.0 HISTORICAL USE

We evaluated the historical use of the Project Area and adjoining and adjacent properties through review of historical aerial photographs, topographic maps, and city directories provided by EDR. This section summarizes information obtained from these sources.

4.1 Aerial Photographs

We reviewed historical aerial photographs for the years listed in the following table for indications of past land uses that had the potential to have impacted the Project Area through the use, storage or disposal of hazardous substances and/or petroleum. The following table summarizes our observations of the Project Area and adjacent properties on the historical aerial photographs. Copies of historical aerial photographs provided by EDR are in Appendix C.

Year	Observations	
	Project Area	Adjoining and Adjacent Properties
1937 (1" = 500')	The Project Area was predominantly used for dry farming. A creek extended into the eastern portion of the Project Area. A road extended north to south through the eastern portion of the Project Area.	The north and west adjoining properties were mostly used for dry farming. A highway extended northeast to southwest on the north adjoining property. Rural residences, roads, and orchards were present on the northeast, east, and south adjoining properties. A creek extended east to west along the south adjoining property.
1947 (1" = 500')	Conditions depicted were similar to those observed in the 1937 photograph.	Conditions depicted were similar to those observed in the 1937 photograph.

Year	Observations	
	Project Area	Adjoining and Adjacent Properties
1952 (1" = 500')	Conditions depicted were similar to those observed in the 1947 photograph, except that a trail was present throughout the Project Area.	Conditions depicted were similar to those observed in the 1947 photograph, except additional rural residences were developed on the east adjoining property.
1957 (1" = 500')	Conditions depicted were similar to those observed in the 1952 photograph, except that the trail was no longer present.	Conditions depicted were similar to those observed in the 1952 photograph, except that the south adjoining property was dry farmed and residential development continued on the east adjoining property.
1964 (1" = 500')	Conditions depicted were similar to those observed in the 1957 photograph, except that a drainage channel flowed north to south through the western portion of the Project Area.	Conditions depicted were similar to those observed in the 1957 photograph, except that two drainage channels extended from the highway on the north adjoining property to the creek on the south adjoining property.
1966, 1972, and 1984	Conditions depicted were similar to those observed in the 1964 photograph, except that trails were present throughout the Project Area.	Conditions depicted were similar to those observed in the 1964 photograph, except that the west adjoining property and a portion of the north adjoining property, was developed with residential neighborhoods.
1993 (1" = 500')	Conditions depicted were similar to those observed in the 1984 photograph, except that trees appear to have been cleared near the creek, in the southern portion of the Project Area.	Conditions depicted were similar to those observed in the 1984 photograph, except that additional residential neighborhoods were built on a portion of the north and south adjoining properties.
1998 (1" = 500')	Conditions depicted were similar to those observed in the 1993 photograph, except that additional trails were present throughout the Project Area.	Conditions depicted were similar to those observed in the 1993 photograph, except that the north adjoining property appears to have been used as a park with a network of trails leading from the highway to the north, to the creek and adjoining neighborhoods. A neighborhood of residential homes was developed on the south adjoining property.
2005 (1" = 500')	A trail was present east to west through the central portion of the Project Area. A drainage channel was present in the central portion of the Project Area, leading to a retention pond on the southwest adjoining property. The western portion of the Project Area was paved to create a parking lot.	A large structure and paved parking lot were present on the northwest adjoining property. The south adjoining property was developed with neighborhoods of residential homes. Retention ponds were present on the southwest and west adjoining properties.
2009 (1" = 500')	The drainage channel was no longer present in the central portion of the Project Area. The western and northwestern portions of the Project Area were paved and a structure was present.	Conditions depicted were similar to those observed on the 2005 photograph.

Year	Observations	
	Project Area	Adjoining and Adjacent Properties
2012, 2016, 2020, and 2024 (1" = 500')	Conditions depicted were similar to those observed on the 2009 photograph.	Conditions depicted were similar to those observed on the 2009 photograph.

Dry farmed fields were present across the western portion of the Project Area from as early as 1937 until likely sometime in the 1950s. This type of crop cultivation suggests that pesticides were not likely applied and persistent pesticides and associated metals are not likely to be present in soil in this area. The DTSC's *Interim Guidance for Sampling Agricultural Properties (Third Revision)* dated August 7, 2008, states that "many dry-land farming fields are not treated with pesticides or infrequently treated, since the lack of water does not provide a desirable habitat for most agricultural pests. Properties that clearly qualify as dry-land farming do not need further investigation for pesticides or metals." The aerial photographs do not show features or land uses that directly suggest the presence of conditions or features within the Project Area or on adjoining and adjacent properties likely to have caused an REC within the Project Area.

4.2 Topographic Maps

We reviewed historical topographic maps provided by EDR for the years listed in the following table. The following table summarizes our observations of the Project Area and adjacent properties on the historical topographic maps. Copies of the historical topographic maps provided by EDR are in Appendix D.

Year	Observations	
	Project Area	Adjoining and Adjacent Properties
1891 (1:125,000)	A road is depicted extending north to south through the central portion of the Project Area.	A creek is depicted flowing northwest to southeast on the south adjoining property and a road is depicted extending northeast to southwest on the north adjoining property.
1892-1893 (1:125,000)	Conditions depicted are similar to those on the 1891 map.	Conditions depicted are similar to those on the 1891 map.
1902 (1:62,500)	Conditions depicted are similar to those on the 1893 map except the road that extends north to south is now depicted in the eastern portion of the Project Area. An unimproved road is depicted extending north to south through the western portion of the Project Area. A creek is depicted flowing throughout the Project Area.	Conditions depicted are similar to those on the 1893 map, except that two structures are present on the north adjoining property, along the road that extends northeast to southwest. Another structure is present on the south adjoining property.

Year	Observations	
	Project Area	Adjoining and Adjacent Properties
1911 (1:31,680)	Conditions depicted are similar to those on the 1902 map.	Conditions depicted are similar to those on the 1902 map.
1951 (1:24,000)	Conditions depicted are similar to those on the 1947 map except the road in the eastern portion of the Project Area is labeled Sylvan Road and a structure is depicted in the eastern portion of the Project Area.	Numerous structures are depicted on the east and south adjoining properties. Auburn Boulevard is labeled as the road extending northeast to southwest on the north adjoining property. The creek on the south adjoining property is labeled as Arcade Creek.
1954 (1:62,500) 1967 and 1980 (1:24,000)	Conditions depicted are similar to those on the 1951 map.	Conditions depicted are similar to those on the 1951 map, except that structures part of residential neighborhoods continue to be developed on the east and west adjoining properties.
1992 (1:24,000)	Conditions depicted are similar to those on the 1980 map, except that the structure in the eastern portion of the Project Area is no longer depicted.	Conditions depicted are similar to those on the 1980 map, except that roads are depicted north and south of the eastern portion of the Project Area.
2012 (1:24,000)	Conditions depicted are similar to those on the 1992 map.	Conditions depicted are similar to those on the 1992 map, except that additional roads are present surrounding the Project Area.
2015, 2018, 2021, and 2023 (1:24,000)	Conditions depicted are similar to those on the 2012 map.	Conditions depicted are similar to those on the 2012 map.

The topographic maps do not depict features or land uses that directly suggest the presence of conditions or features within the Project Area or on adjoining and adjacent properties likely to have caused an REC within the Project Area

4.3 City Directories

EDR prepared an abstract of city directories including city, cross-reference, and telephone directory listings (Appendix E). EDR included information from directories at approximately 5-year intervals, if available, from 1963 to 2022. The city directories list commercial businesses and individual homeowners for the Project Area and adjoining and adjacent properties, none of which suggest the storage or use of large quantities of hazardous substances or petroleum products sufficient to have caused an REC within the Project Area.

5.0 SITE RECONNAISSANCE

This section summarizes our observations of the Project Area and surrounding properties made during the reconnaissance.

5.1 Methodology and Limiting Conditions

Lauren Fordyce-Pitner, Staff Scientist, with Geocon, performed the Project Area reconnaissance on January 19, 2026, by walking unaccompanied throughout the Project Area and along the boundaries to observe Project Area features and conditions. She observed adjoining and adjacent properties from the Project Area and public roads. Weather on the day of the Project Area reconnaissance was sunny with temperatures in the mid-50s°F. Photographs of various Project Area features and offsite properties are appended.

5.2 Project Area Setting

The Project Area is situated in an area of residential, commercial, and recreational properties.

5.3 Onsite Survey

The Project Area includes the southern and eastern portions of the Stock Ranch Commercial Center (behind Walmart and Costco). We observed loading docks, packing materials such as pallets, paved parking areas with staining, several shipping containers with unknown contents, a locked propane storage area, machinery, and various utilities such as irrigation, electric, and stormwater (Photos 1 through 5). While hazardous materials may be present inside the shipping containers and were observed in the propane storage tank area, we observed no evidence of spills or leaks and the shipping containers were secured and located on pavement. Therefore, it is unlikely that hazardous materials would have contaminated the surrounding soil.

The southern portion of the Project Area, beyond the Stock Ranch Commercial Center, includes the Stock Ranch Nature Preserve which is comprised of various unimproved trails (i.e., gravel, mulch, dirt) and paved trails through the Arcade Creek riparian area (Photos 6 through 8). We observed picnic tables, park benches, informational signs, art installations, debris and trash, and homeless encampments along the creek (Photos 9 and 10).

The Project Area crosses Arcade Creek, east of the Stock Ranch Commercial Center and adjacent to a pond (Photo 11). We were unable to cross the creek at this location, and a retaining wall and fence prevented access around the creek crossing (Photo 12). We drove to Huntington Square Apartments to access the northeastern portion of the Project Area. A paved trail was present behind the leasing office building and continued east towards Sylvan Road (Photos 13 and 14). We observed caution tape blocking off the area west of Sylvan Road where a fence was knocked over (Photo 15). The Project Area crosses Sylvan Road, north of the Arcade Creek Bridge (Photo 16). We observed no evidence of RECs within the Project Area.

5.4 Offsite Survey

Adjoining and nearby properties include residential homes, Stock Ranch Commercial Center, Stock Ranch Nature Preserve, Arcade Creek, and Sylvan Road (Photos 17 through 19). We observed no evidence of RECs on adjoining or adjacent properties.

5.5 Features, Activities, Uses, and Conditions Not Observed to Be Present

ASTM Designation E1527-21 states "During the site visit, the environmental professional (or the person under the supervision or responsible charge of the environmental professional) shall look for and identify the features, activities, uses, and conditions specified in 9.4.1 through 9.4.28. Any of the specified features, activities, uses, and conditions identified in, on, or at the subject property shall be described in the report. If any of the specified features, activities, uses, or conditions are not found to be present in, on, or at the subject property, the environmental professional shall document as such in the report." The features, activities, uses and conditions that were present during our site reconnaissance are described in Sections 6.2 through 6.4. The following are features, activities, uses and conditions that were not observed to be present during the site reconnaissance:

- Past use of site;
- Past uses of adjoining properties;
- Past uses of surrounding area;
- Geologic, hydrogeologic, hydrologic, and topographic conditions that would contribute to an REC for the site from an adjoining property;
- Sewage disposal system;
- Strong, pungent, or noxious odors;

- Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products;
- Drums or totes;
- Hazardous substance and petroleum product containers not in connection with identified uses;
- Polychlorinated biphenyls (PCB)-containing items;
- Heating/cooling;
- Stains or corrosion on floors, walls, or ceilings;
- Sumps;
- Pits;
- Stained soil;
- Stressed vegetation;
- Wastewater;
- Wells; and
- Septic systems or cesspools.

6.0 FINDINGS AND CONCLUSIONS

We have performed an ISA in general conformance with the scope and limitations of ASTM *Designation E 1527-21* and *Caltrans Initial Site Assessment Guidance* of the proposed Arcade Cripple Creek Trail - Sylvan to Stock Ranch Extension Project in Citrus Heights, California. Exceptions to, or deletions from, this practice are described in Section 1.3 (limitations). The ISA has revealed no evidence of RECs, CRECs, or significant data gaps in relation to the Project Area.

Yellow thermoplastic and paint striping that is removed during planned roadway improvements may require special handling and disposal requirements, as those applied before 2005 potentially contained lead chromate pigment (Caltrans, 2019). Given that there is no assurance that striping and markings applied before 2005 have been completely removed or worn away, traffic striping and pavement markings observed within the Project Area generally have the potential to contain lead or chromium. Traffic striping and pavement marking waste generated by this project should be managed during construction. All striping paints should be treated as lead-containing for purposes of determining the applicability of the Division of Occupational Safety and Health, Cal/OSHA, lead standard during removal activities. Used sandblasting materials or ground asphalt waste streams containing striping paint should be properly containerized and characterized to develop a waste profile prior to disposal.

8.0 QUALIFICATIONS

This Phase I ESA report was prepared by Lauren Fordyce-Pitner and Josh Ewert, PG. Mrs. Fordyce-Pitner is a Staff Scientist with a BS degree in Environmental Science and has worked on a variety of environmental assessment projects.

Mr. Ewert has a BS degree in Geology and 18 years of experience in environmental investigation and remediation, including implementation of Remedial Investigation/Feasibility Study programs and soil and groundwater remedial actions for private industrial and government clients. He has managed a wide variety of projects for clients in the manufacturing, transportation, automobile, and real estate industries including Environmental Protection Agency and DTSC Superfund sites. Mr. Ewert has extensive experience in the performance of Phase II ESAs of commercial, industrial, and agricultural properties throughout California.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries investigation in conformance with the standards and practices set forth in 40 CFR Part 312.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/20/2025 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse

WALMART SUPERCENTER NO 3712 (Continued) **1014387130**

combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	OBSERVATION: The labels on the Waste Flammable Liquids and Waste Flammable Solids containing Liquids containers at the fueling facility are inconsistent with the contents as described. REQUIRED ACTION: Resolve the issue described above and, if necessary, change the labels to reflect your decision. Send documentation to Mr. Steele as to your decision (steeled@saccounty.net) which would include a photo of the labels if changed. Be sure the future manifests reflect a change in your labelling/contents. UNDETERMINED STATUS REVERTS TO A VIOLATION IF NOT ADDRESSED WITHIN 30 DAYS. If necessary, contact Mr. Steele.

violation that I noted in my original inspection report. Barghausen Consulting Engineers, Inc., a consultant for Costco, has email correspondence from the State Water Resources Control Board confirming that facilities do not need to upload their current insurance policy to the California Environmental Reporting System (CERS) in order to meet the financial mechanism requirement; instead, facilities just need to retain a copy of their insurance policy onsite. Consequently, no violations were found during my 1/25/2017 inspection. On 2/1/2017, I emailed a copy of this inspection report to Briana Armstrong (BArmstrong@barghausen.com) and I requested that Admin Support send a copy of the revised NTC to the facility via certified mail.

Eval Notes: On 1/28/2020, an Underground Storage Tank (UST) inspection was conducted at Costco Wholesale #771 to verify compliance with Chapter 6.7 of the Health & Safety Code and Title 23 of the California Code of Regulations. This facility maintains three underground storage tanks at the following capacities: Two x Regular Unleaded @ 20,000 gallons, Premium Unleaded at 20,000 gallons and an additive tank at 1,500 gallons. Today's inspection was conducted to verify communication from the sensors to the monitoring panel, which is a Veeder Root TLS system. Assisting with testing was Issac Anderson (ICC #8146912 cert expires 06/12/2020). During today's testing on 01/28/2020, the following sensors were tested to verify communication with the Veeder Root Monitoring panel: piping sump sensors (205s), brine annulars (type 301s), under dispenser containment 208 sensors, fill sensors (343) and interstitial brine sensors for all sumps (323), line leak detectors (84848-001) and overfill alarms [Truncated]

Violation Notes:	Returned to compliance on 04/22/2016. OBSERVATION: The facility stores several 8-gallon propane cylinders stored in the cage located in the back of the property that are not reported on its Hazardous Materials Business Plan (HMBP). Hazardous materials stored in reportable quantity (200 cubic feet for gases, 55 gallons for liquids, or 500 pounds for solids) onsite must be reported in the HMBP. The facility's environmental contact, Jeremy Sperling, reported at the time of inspection that the propane cylinders were moved onsite within the past year. Significant changes like this need to be added/submitted via the HMBP within 30 days of the change. CORRECTIVE ACTION: Resubmit the facility's HMBP in CERS after updating the facility's chemical inventory section of the HMP to reflect the propane cylinders.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

USGS TOPOGRAPHIC MAP

Target Property Map:	50033895 CITRUS HEIGHTS, CA
Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

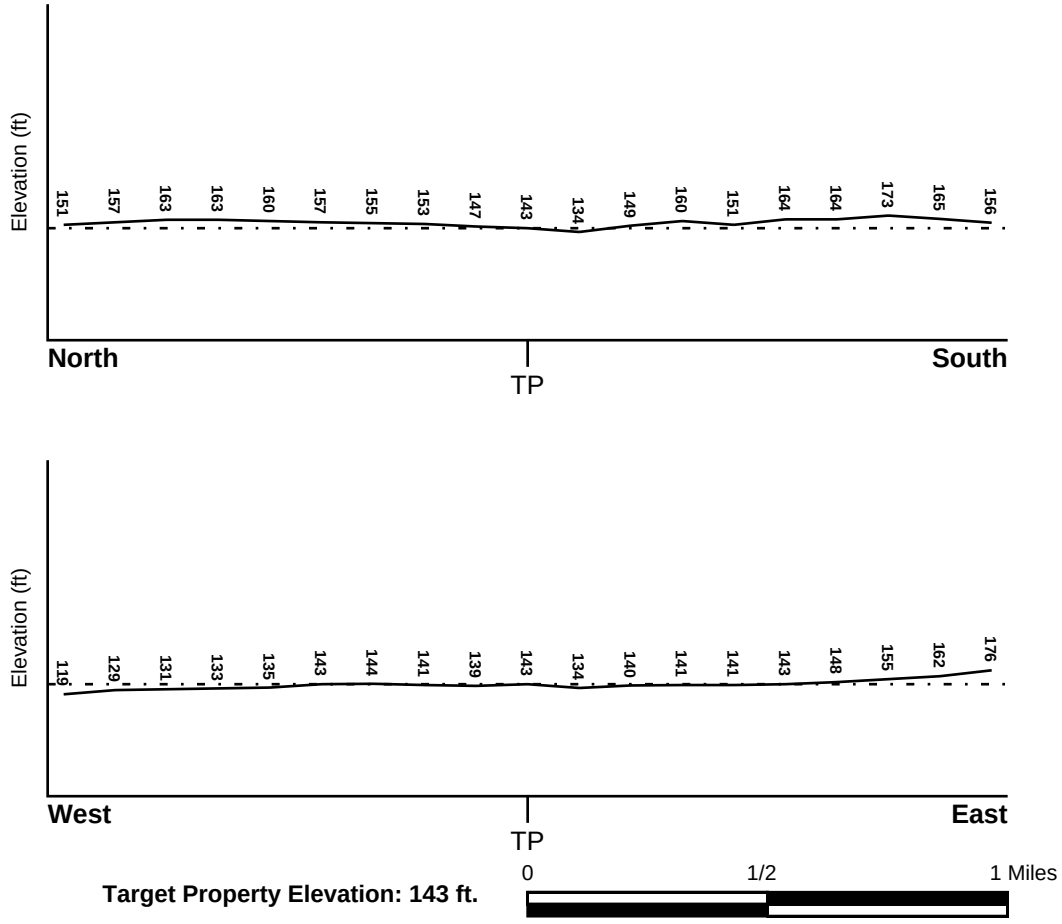

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: FIDDYMENT

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
